Dear Ms von Westerholt,

I wish to thank you for inviting feedback from residents in the Belmont Village/Westmount neighbourhood regarding the proposed change to the Dettmer Tire Property on Belmont. We only recently received the plans, I hope these comments don't arrive too late.

I was shocked to learn that the property is already zoned to allow an 8 storey building! Belmont Village is a charming and inviting area, in part because of its bright daylight, view of lots of sky, generally open feel, and manageable vehicular traffic. A status quo cap of 2 storeys would be lovely, 4 storeys an acceptable evolution, but 8 storeys or 25 metres of darkness into the sky on the edge of Belmont would be really disappointing. The increased number of residents driving to and from the parking garage would make the area congested at times too. I worry for the character of the Village, if the other buildings along that strip end up being that height, and with a precedent set, it would be very difficult to stop the trend.

I am STRONGLY against the proposed change to allow a building twice that height to be built. Really?! 13 storeys and 49 metres? in Belmont Village? And if more buildings that height lined the (East?) side of the street, the road would be in shade all morning, especially in the colder months when the sun is lower. And if that building height became the norm on the (West) side of the street, I suspect that many residents on Rock Avenue, Claremont Avenue and Earl Street would lose their morning sunlight.

I wish to be kept up to date with respect to these developments please, and I do wonder why we only heard about this by chance from a neighbour?

71 Claremont Avenue

Hello,

I live in the Westmount neighbourhood and and what makes Belmont Village special is that it feels like a village, not a city as the buildings are only two stories high. I strongly oppose allowing this development to go beyond 8 stories and would prefer 4 stories at most to preserve the essence of this area. Allowing 130 units on this small parcel of land is too dense and would create too much traffic congestion on a street that is already very busy.

Regards,

Follow Up Flag: Follow up
Flag Status: Flagged

Hi Juliane,

Following up on my earlier emails and voicemail left this morning. As of today, it appears that no submission materials have been posted on the City's website. I understand that the deadline for area residents to provide comments to staff is this holiday Monday, September 7th. Without the benefit of any supporting plans and reports submitted with the OPA and ZBA applications for 660 Belmont Ave W, we're unable to provide well-informed feedback to staff.

My questions at this time:

1) Has the deadline for local residents to provide comments to staff been extended from the original September 7th deadline given the lack of available information?
2) Has a Notice of Completed Application under the Planning Act been issued to the applicant/agent?

My concern is that this application will slip through the cracks and that local residents will not be afforded the mandated opportunity to provide feedback. My other longer-term concern is that given the lack of transparency that staff will be unable to review the applications and provide a recommendation concerning the applications within the Planning Act deadlines. Should the applicant chose to appeal a non-decision of their planning applications it would escalate what should be a routine process into a more challenging process.

My expectation is that the following supporting materials, and perhaps others, would have been submitted in support of the planning applications, which we'd appreciate the opportunity to review:

- Architectural Plans (Site Plan, Underground Parking Plan, Floor/Roof Plans, Elevations, Cross-Sectional Drawings demonstrating a transitional angular plane to the adjacent parkland/bike path)
- Phase 1 ESA & Phase 2 ESA (given the change of use from an automotive repair shop to residential use)
- Civil Engineering Plans (Grading, Servicing, Erosion & Sediment Control, etc.)
- Functional Servicing & Stormwater Management Report
- Traffic Impact Study, Transportation Demand Management Strategy, Parking Study
- Geotechnical & Hydrogeological Reports
- Sun/Shadow Study
- Pedestrian-Level Wind Study
- Planning Justification Report
- Urban Design Brief

Regards,

Subject: [EXTERNAL] 660 Belmont LP Inc. - OPA & ZBA Applications

Hi Juliane,

Can you please advise if a completed application for Official Plan Amendment and Zoning By-law Amendment has been submitted for the property at 660 Belmont Ave W in Belmont Village near Glasgow Street?

Although the attached letter was circulated to area residents, I haven't seen any recently posted information on the City of Kitchener website's list of Active Planning Applications. At this time, I'm seeking all supporting materials for these applications, on behalf of my parents, who reside at 797 Belmont Avenue West to enable their review of the proposal and to inform their ability to provide feedback.

Regards,

Garett Stevenson

Subject: [EXTERNAL] Dettmer Tire proposed development

Follow Up Flag: Follow up
Flag Status: Flagged

Thank you for allowing me the opportunity to express my thoughts on the proposed development on the Dettmer Tire site. I am assuming that the current zoning which restricts the height of a building to approximately 8 stories, was put in place to protect the character of the neighbourhood and the integrity and viability of Belmont Village. I don't believe that there has been any material change to the surrounding area that would warrant a departure from the existing bylaw or principles upon which the decision to limit a building to 8 stories was based. If anything, it's more important now to ensure that we are protecting the character of neighbourhoods as new development and infill takes place within the city.

I am not opposed to development, so long as it is done thoughtfully, transparently and fairly taking into consideration the current business and nearby residents.

My primary concerns about allowing 13 stories instead of the approved 8 stories are:

Traffic
The increased density that an extra 6 stories will bring will lead to increased traffic in the area. I live on Avondale Avenue, and "pre Covid-19" there were times when the traffic on Glasgow was so congested that I was unable to make a right hand turn out of my own neighbourhood in a timely fashion. I also had issues crossing Union when I walk my dogs or when I walked to work because of traffic. The Region has, albeit temporarily, reduced Westmount road to one lane in each direction to experiment with bike lanes, and Belmont is now also restricted due to bike lanes. We are already seeing increased traffic from individuals cutting through the neighbourhood to avoid traffic congestion. This will likely get worse with the increased density that is being proposed by the developers.

Parking
I am concerned about parking. Apartment and condo buildings often don't have enough parking for residents which leads to parking on the streets and in spaces intended for customers of businesses. Individuals generally prefer surface parking. The proposed 30 surface spots may not be sufficient to support even an eight story development with retail. This means that individuals will be parking in the residential areas, or taking existing spots in Belmont Village which would impact residents as well as existing business owners in the Village.

Precedent
Allowing a 13 story development will create a precedent for the other properties within Belmont Village. A lot of the Village has recently changed ownership, and I assume that the strong interest in the Village is because developers are hopeful that the City will abandon current restrictions to allow more density and development. Higher density projects belong along corridors such as King Street in the downtown core where impact on residential areas are minimized. I would hate to see a "wall" of high rise buildings in the Village that block out light and make us feel as though we live in a downtown corridor.

Other questions:

Will the development have any units dedicated to affordable housing? The area is quickly getting priced above what an average individual can afford.

What is the criteria used when granting changes such as this?

Has the City granted bylaw changes to this developer in the past?

Have any traffic studies been done?

Again, thank you for the opportunity to comment. I would be interested in being kept informed as this issue progresses. I can be reached through this e-mail or by mail at:

Subject: [EXTERNAL] Dettmer Site - By-Law Change Request

Follow Up Flag: Follow up
Flag Status: Flagged

I am writing regarding a by-law and official plan change request on the Dettmer Tire Site on Belmont. The request is to increase the height of the building allowance from 8 stories to 13, doubling the permitted height of the structure. Belmont Village is a gem in the city. It is worth the effort to retain, as much as possible, the unique character of the village. My fear, based on historical precedent and five years' teaching at the UW School of Planning, is that this doubling of height will set a precedent that leads to a line of condos marching along Belmont from Glasgow to Union, each one stretching the height limit a little more based on this decision. Westmount is a great example of a livable neighbourhood – the kind of neighbourhood that our City Councillors have repeatedly said they want to build and retain. Please do not let this be the beginning of the end of this gem.

Follow Up Flag: Follow up
Flag Status: Flagged

Hello Juliane,

I own a house that is one of the very closest in proximity to the subject land of the proposed 13 story building. My house is located on the corner of Gildner and Eden Streets, situated directly to the east of where the proposed building would stand.

For the record, I am opposed to the building of the predominantly residential mixed use building and especially one that could be as tall as 13 stories.

If built, the new building will regrettably have a negative impact on the quality of life which I now enjoy. The building will take away all privacy of my home's yard and patio. Residents of the new building's east side will be looking down directly into my yard. My property value will undoubtedly decrease as the location will immediately become less desirable.

There will be more noise. Afternoon sunlight will be blocked. Roadways near the building, especially Eden Street, will be much busier and full of parked cars. Eden street is normally quiet in the evening, but this will undoubtedly change as the demand for parking in the surrounding area increases. More cars parking in the later hours will create more street noise, which will have a negative impact on the quietness required for obtaining a good nights rest.

A big concern is that Eden Street is always being used as a staging area for large construction vehicles such as dump trucks and concrete mixers. I know this from witnessing many construction projects nearby over the past 17 years I have lived here. For example; The parking lot for the Catalyst 137 building took approximately 1 full year to be completed. My house literally shook from all the heavy equipment.

The trucks start arriving and getting prepared for work before 6 AM. They come and go all throughout the day. There is absolutely no quiet time to be found during the day, due to the constant barrage of noise a person has to endure.

I fear that if the re-zoning and new building is approved, I will be forced to move away from the neighbourhood.

Please keep me informed on any developments regarding this application.

Thank you sincerely for the opportunity of providing my input.

Juliane
We have received notice of the intent to develop the Dettmer Tire property into condos. We understand that the developer is asking for permission to develop 13 floors versus the allowed eight floors. We live on Earl St and like the village atmosphere on Belmont and feel that 13 floors would significantly alter this feel. We will miss Dettmer and wish something else was going in that property - but strongly object to the 13 floors of condos.
Thank you in advance for considering our views on this and please inform us of your decision.

Hello Juliane,

We highly **oppose** the proposal to change the Dettmer Tire property in Belmont Village from an 8-story to a 13-story mixed commercial or residential condo on the site.

A 13-story building is much too high in that area. The consequences will be enormous for the character of Belmont. It will change the future for the Village and Westmount and set a precedent for other property developers to change that entire section to 13-stories.

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Juliane:

I would like to register my comments regarding the Zoning By-law Amendment Request for 660 Belmont.

1. No issue with a building subject to the current plan for 8 stories and approx. 25m height
2. I am not in favor of amending the zoning to allow the larger and taller building, 13 stories; 49 m height
    - Such a building on the higher ground would shadow and dominate the surrounding neighborhood
    - Such a building would be out of character with the neighborhood, and the adjacent park
    - Significant increase in traffic, concerns with building providing provision for sufficient visitor parking in particular.

Yours respectfully

Owner 156 Glasgow

Importance: High

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Juliane (if I may).

I would like to provide written feedback to express concern over a pending application to amend zoning for a property located at 660 Belmont Avenue, Kitchener, currently the site of Dettmer Tire.

I own a home nearby, and, while our neighgbourhood has long been aware that this land could potentially be redeveloped into an eight-story mixed-use structure, the current application to amend seeks to allow a significantly larger building: thirteen-stories.

I am strongly opposed to this amendment and would like to make my opposition known in the most effective way possible. Can you please provide instructions on how best to do this?

With thanks and all best regards,

Subject: [EXTERNAL] 660 Belmont / Belmont Laneway Concern

Importance: High

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Mr. Stevenson, Mayor Vrbanovic, and City Councilors,

I am the owner of 79 Earl Street, located near 660 Belmont West, Kitchener. I attended the online (Zoom) Neighbourhood Information Meeting and attempted to participate in the discussion. Unfortunately, at that time, city staff restricted participation by requiring that any interested party send their messages using Zoom's private chat function. City staff then screened which questions would be asked, ostensibly out of concern for time constraints. As a result of this rather restrictive and controlled process, my questions were not addressed. Nor did I ever receive any follow up response via email.

At the time of the NIM, my principle concern was the treatment of Belmont Lane East. It appeared to me then that the developer of 660 Belmont, the Zehr Group, was somehow acquiring that public land from the city. No information was provided on why the city was alienating public land, how the community would be compensated for its loss, or what agreement, exactly, had been struck with the Zehr Group.

Today, I learned that the Zehr Group made known its desire to purchase Belmont Lane East as early as September 2019, though, so far as I can tell, this information has never been disclosed to neighbourhood residents by the city. It certainly was not mentioned during the NIM. In fact, so far as I can tell, the City has not made any details of this proposed transaction or the accompanying process clear to the public. I believe, moreover, that on November 8 2021, Council met in secret to discuss criteria for the disposition of public land. I have not been able to obtain minutes from that meeting and would be grateful if you could please share them with me.

In general, the process surrounding the development of 660 Belmont Avenue causes great concern and, in particular, the potential loss of public land through the requested disposition of Belmont Laneway is deeply worrying. As you know, the Urban Design Manual (2012) sates that "Belmont Laneways (Easte and West) [shall] be maintained as public property." Those of us who live in the neighbourhood use the laneway on a regular basis. Its loss would be a major blow to the community.

It seems to me, and to many of my neighbours, that the Zehr Group has already benefited from exceptional consideration by the City. Their proposed plan to develop 660 Belmont already exceeds the allowable height requirement and will likely usher in a fundamental change to the character of Belmont Village. The special considerations already being sought openly by the Zehr Group open the door wide to the construction of large, ungainly structures all along Belmont Village, effectively destroying the very village quality that anchors our community. Surely there can be a balance between the developer's needs and those of the community. Disposing of the Laneway is a concession too far, one that should not be considered without meaningful community consultation. Were that to happen, I am confident that the vast majority of neighbours would push back against the alienation of public lands to benefit a private, for-profit corporation.

Yours,

79 Earl Street
Kitchener, Ontario

Dear Ms. von Westerholt,

Thank you for coordinating the interaction of this project with interested parties from the community. It is my first time participating in this process and I appreciate the email updates.

I just want to first share what I appreciate about the proposed project:
- I appreciate the streetwall that this project would create, an obvious improvement to what is presently occupying the space. This design would also remove one of the driveways to the property which would hopefully improve the pedestrian experience and slightly improve the cycling experience, removing a conflict point. Having businesses that continue along that portion of Belmont will be a welcome addition.
- I appreciate the connection to the Iron Horse Trail that this project would create, hopefully crossing Belmont Lane safely using a raised sidewalk or other trail crossing markings. The trail access point to Belmont Ave spills out into a laneway and then a parking lot with no safe pedestrian markings. Hopefully this project, and the building laneway appears to show this, can provide an improved and safe access point.
- More people: My family appreciate this neighbourhood and really love the walkability of Belmont village and believe that having more people around is a good thing.

A few things that concern me:
- After reading through the design brief I understand there are more details still to come, such as materials to use, the actual renders of the building, and even the intended market. However, the shear mass of the building is quite large and combined with the height of the building it feels like they are trying to cram as many units into the space as possible. The height combined with the mass creates a large shadow effect across one of the only parks in the entire area (according to the PARTS plan). They are asking for an additional floor that amounts to an additional 13 meters in height. Although I love the businesses along the street wall, and the trail connection, I would appreciate seeing more community benefits to justify going so far above the planned zoning for the site.

Overall, I am interested to see how this project develops and look forward to further emails from you.

Thank you for your time.

Dear Resident:

Thank you for participating in the virtual neighbourhood information meeting (NIM) for the 660 Belmont Application for Official Plan and Zoning By-law Amendments held on Thursday December 17th, 2020.

Here are the follow-up items from the meeting:

- Studies submitted with this application, as well as the video presentation from the applicant can be retrieved through this link.
- The City's website has been updated to include the presentation material from the meeting for your reference. Please note that this does not include a recording of the meeting, which was the original intention, as staff was not able to resolve the logistics regarding privacy procedures prior to hosting the meeting.
- Please share your comments and additional questions on the application by emailing me or calling me by January 11, 2021.
- Please share your general feedback on this meeting through this survey

After January 11th:

- I will prepare a summary of What We've Heard and forward it to you
- I will also include the answers to the questions raised at the NIM, as we were not able to answer all questions during the allotted time.

This was not your last opportunity to participate or provide me with comments. Staff will evaluate the feedback received to date and, in consultation with Councilor Johnston, will determine the next steps for engagement.

You are always welcome to call me at the number below if you wish to chat. I look forward to hearing from you soon. In the meantime, I would like to take this time to thank you once again for your interest in this file and wish you and your family Happy Holidays and a healthy and prosperous New Year in 2021!

Sincerely,

Juliane

Hello Juliane:

I was referred to you by the neighbourhood association re the above.

I am a resident who lives on Dunbar Rd just south of Glasgow St. I find the prospect of a 160 ft high building in the Belmont Village area totally incompatible with the neighbourhood. The character and grace of the community will be marred by this gargantuan structure. I view the Belmont Village broad streets and low rise commercial area as an important part of Kitchener's heritage and should be protected. There should not be any zoning variance given for this type of development.

Subject: [EXTERNAL] 660 Belmont Proposed Development

Hello Garett:

My wife and I, live on Dunbar Rd, and have been part of the larger and smaller group meetings about the proposed 660 Belmont Development.

We are not opposed to developments in Belmont village where the scale and design are compatible with the Belmont Village environment.

Belmont Village is a low rise, open, inviting, people friendly environment that is unique. Its existence was one of the reasons we moved to live nearby. No building dominates others.

The proposal to develop 660 Belmont is inconsistent with the nature of the Village.

To us the development is trying to impose a scale of development into an area where existing planning and zoning needs to be changed just to make the project viable. As a result the unique character of the Village is in danger of being lost.

Significant shadow will be cast on Avondale, Earl, Belmont, the Iron Horse trail, and streets to the east of the development. The quality of life for residents living in the shadow is significantly impacted.

I know traffic studies have been done but residents such as us have experienced pre pandemic traffic backups on Glasgow Street stretching from Westmount to Park Street at times. This will only make things much worse.

The fact that the development does not meet current standards for parking spaces will likely result in vehicle parking lining narrow adjacent residential streets.

We know the Zehr Group and other developers have bought up the whole east side of Belmont Village as well as portions of the west side. We see approval of this development as proposed opens the door for large, similar developments in the rest of Belmont Village.

This will totally destroy the "Village in the city" which is a "one of a kind" in the region.

In summary, this development is incompatible with the nature of the Village. A more modest development of 8 storeys, 25 meters in height would be more appropriate.

We hope the Kitchener Council listens to local residents and limits the scale of this development.

Thank you,

Garett Stevenson

Hi Ms. von Westerhout,

Writing in response to the request for input on 660 Belmont LP Inc.

I am not in favour of this application to change the zoning by-law for the following reasons:
1. There are no plans, drawings,etc. available to see what the developer has in mind 2. No mention of any traffic studies or environmental impact for any development of this sort - also the traffic study needs to be done during non-pandemic time period to get an accurate measure 3. This is currently zoned for an eight storey mixed use development and there should not be a need to change that as that is keeping more in line with what is currently in the Belmont Village area - none of the other buildings are over three stories in height (there are structures further down Belmont that are more than eight stories but they are not part of the Village area) 4. This notice was sent out with a very short period for responses given that there wasn't documentation available and it was during summer vacation time for many people so they may not have had time to review and reply. As well, this had a very limited audience (primarily one side of Earl Street and Rock Ave.) and should have been sent to more residents in the area as this development will impact a large part of Westmount 5. There are already issues with parking on the side streets as there is insufficient parking for Village clientele. As parking will most likely be limited for the new development, visitors and other overflow parking will move to the residential side streets, impacting traffic flow and causing congestion in the residential neighbourhood.

6. Belmont Village is a quaint, historical area in Kitchener. The quaintness of the village needs to be kept. However, with an unseen thirteen story development, if this is allowed to go through it will open the doors to ruining the village environment.

Looking forward to receiving further information on this development.

Hi Juliane,

First thank you so much for your message on the building project and the proposed zoning change!

After reviewing the information you provided my primary question is whether this project contains any affordable housing or initiatives towards affordable units?

I could likely support the zoning amendment for 13 vs 8 stories of the building if a decent percentage of the units are destined for affordable housing. I could imagine the community getting behind this if there was documentation indicating the intended mix of affordable and standard units.

If this project is purely private, I can not support another expanded condo like project, with unaffordable units. In that case they should obey the existing bylaw. Creating another extra tall unaffordable building of this nature brings no value to the community. Only profit to the private owner.

Thanks for any info you can provide on my above concerns.

Lastly, I noted you cc'd the ward 8 councillor in your message, but I believe the proposed building and my address are in ward 9.

Ms. von Westerholt
I am the property owner at 665 Belmont Ave W in the Belmont Village.
I wish to submit my comments about the proposed land use amendment above.
My concerns about the proposed amendment include the potential drastic and adverse alteration of the atmosphere in the Belmont Village for residents, business owners and retailers. Th tallest building in the Village is 3-storey. The current MU-2 zoning allowing 8 storey is more than sufficient already for further development, allowing for a 13 storey may create issue with insufficient/inadequate parking within the Belmont Village for patrons and retailers. maxThe 163 residential units may encourage more illegal parking (longer than 2 hours) which is already a problem in this area. I believe the current land use is adequate. I trust City Councillors will take this into consideration.

I would also like to request to be included in any future communications/decisions of the city concerning this proposed OP amendment.
Thank you very much.

Best personal regards,

Subject: [EXTERNAL] 660 Belmont Ave. W. proposed amendments

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Ms. von Westerholt,

I am writing re: the proposed Zoning By-law Amendment and Official Plan Amendment for the property at 660 Belmont Ave. W.

My husband and I live a few blocks north of that site near Belmont and Union. While we are very much in favour of in-filling, 13 storeys/49m just seems too high for that block. The current Mixed Use designation permitting an 8-storey/25m structure seems far more appropriate.
Therefore, I would oppose the owner's request for an amendment.

Can you also tell me if any of the proposed residential units will be required by the city to be affordable housing? There is such a need for that in this community.

Please do add our address to your circulation list, so we can be alerted to further meetings or discussions. Thank you!

Sincerely.

774 Belmont Ave. W.
Kitchener, ON N2M 1P4

Subject: [EXTERNAL] 660 Belmont Ave. W. proposed amendments

Dear Mr. Stevenson,

I am writing re: the proposed Zoning By-law Amendment and Official Plan Amendment for the property at 660 Belmont Ave. W.

My husband and I live near the corner of Belmont and Union, just two blocks north of the 660 site. I have attended the various virtual information sessions, as well as a smaller, online discussion group. I've read the lengthy documents. In other words, I have listened, asked questions, and done my due diligence!

After all this, **my husband and I continue to oppose the owner's request for an amendment.** While we are very much in favour of in-filling, 49m just seems too high for that block. The potential change in the nature of Belmont Village, the shadows that such a building would cast, and the precedent this would set for the rest of the street are too important to ignore. The current designation in the Official Plan that permits a 25m structure seems far more appropriate. If that were to happen, I'd have no problem with the development.

We therefore request that this proposed by-law amendment *not* be approved.

Sincerely,

Virus-free. www.avast.com

Good morning Juliane,
First we apologize for not sending this earlier but only recently upon returning from vacation, were made aware of this development by our neighbours who received correspondence from you.

As residents on Earl street we look directly at this property from our front porch. Our family has lived here for almost 40 years and are sad to see the Tire store leave. They are well respected in the community and were always receptive to input from the community. Needless to say most of our neighbours frequented their business. Their hours of operation and the physical architecture of the building they leased ensured minimal disruption on the street and maintained the height levels of surrounding businesses.

In regards to the proposed condo development , at 660 Belmont, we accept that the current mixed use designation permits an 8 storey structure of approximately 25 metres in height. We believe , however, given the historic nature of Belmont Village and the current height of the buildings along Belmont from Glasgow to Union, this is still overly high. In Toronto there has been a move to 6 storey condo buildings as they provide a more liveable space and a more attractive streetscape.
Recently several homes have sold in the area and upon purchasing these properties, both the real estate agents and the potential and ultimate purchasers of these properties, indicated that they were attracted to the "Belmont Village lifestyle." We assume the easy access of the shops, restaurants and small businesses along the Belmont strip is what they are referencing.
That has not prevented the purchasers from tearing down and rebuilding these properties, unfortunately, but others are renovating and updating these historic homes and regardless of their plans for their new properties, they still refer to the attractiveness and the "walk friendly" aspect of Belmont Village as a purchase motivator.
The streetscape of Belmont village is unique to the city and should be maintained. The commitment by the city to promote , invest in and feature this area of Kitchener and the surrounding Westmount neighbourhood , indicates to us how important it is to retain the charm and appearance of this heritage area.
We are very much aware of the demands for housing and the desire to infill wherever and whenever possible. We are certainly not members of the "Nimby" belief that only certain areas can be used to increase housing opportunities for our citizens. We are , however ,very much opposed to amending the land use designation and zoning of 660 Belmont to essentially double the height from 25 to 49 metres. If the developer has the right, under the present zoning, to build an 8 storey structure no higher than 25 metres, then that is the maximum that should be permitted. In such a case the desires for increased housing would be addressed and the character of Belmont Village would be minimally affected.
Finally, we would like to be kept informed of any new developments in regards to this property and welcome any further contact from yourself if you would like to discuss this in greater detail.

Sincerely,

33 Earl Street
Kitchener

Follow Up Flag: Follow up
Flag Status: Flagged

Hi
Contained are my thoughts on this zoning change. I find that I am a little annoyed with it and any positive motivation for this height change escapes me. I am mentally pre-occupied with the city declared "climate change emergency" at the moment and I see this as a contributor to it. I would think the city could do better and hope they closely reconsider what they are doing.

30 Gildner St
Kitchener, ON, N2G 2H3 519-576-8106
August 30, 2020
Juliane von Westerholt, Planning Division,
Kitchener City Hall,
6th Floor, 200 King Street West, Kitchener, ON N2G 4G7

Dear Ms Juliane von Westerholt,

I am very concerned about the zoning by-law amendment requested for 660 Belmont Avenue by 660 Belmont LP Inc. to allow a 13 storey (49 metres in height) building to be built at this site. The current zoning of Medium Intensity Mixed Use allowing an eight storey (25 metres in height) is there for a reason. That reason is to produce a certain type of cityscape in that area and to allow those who choose to locate there to decide on the location based on what they know it could possibly become in the future. When you destroy their (our) expectations you reduce the trust put in you by the electoral process leading to the political cynicism that is so rampant these days. I am opposed to this amendment.

I am very disappointed that the city would be considering allowing the exception to to the zoning by-law requested for 660 Belmont.
The type of high rise you would be acceding to, under pressure from the corporate builders (there is no other reason than money to change a delightful, pleasant, relaxed commercial/residential area) is a foot in the door for more of the same. That leads to the shadowy congested streets butting up to the sidewalks, with no useable green space, that Waterloo has allowed around the University. We moved from Westmount Road in Waterloo to this pleasant quiet area of Kitchener after the city opted to change it to a high traffic area from quiet residential.

I can't see why the city would do this other than tax revenue at the expense of the locals. The very lovely Iron Horse Trail would be shadowed in the afternoons and the wild grasses and trees replaced by manicured lawns. And then there is the accompanying increase in vehicular traffic on surrounding roads. And what about parking and exhaust fumes?

Also what percent of the living space is affordable housing? Is there any? Will that be substantially increased with the height exception? What sustainability features are being required? Is the building required to be energy neutral? Insulation? Solar panels? What about recycling and waste treatment? Are they zero impact and is that included in this

deal with the city? Does the building design have any redeeming architecturally significant features? Is it in any way attractive or just the same old rectangular box. Does it account for varying family sizes? Or one size fits all? How about Grey water recycling? Are there any positives?

Zoning laws are the citizens desires and a good builder will fit profitably into those rules. If he cannot then his project is not destined for that location and a suitable one should be found. The city and its planning department should be planning around the needs and desires of the residents and property owners in the area that is being affected, not the maximization of profit of some corporate elite.

Having seen the diagram of the proposed development, I can't believe you are serious! Really? Belmont is to become an urban jungle?

Subject: [EXTERNAL] Belmont Dettmer site Zoning by-law input response

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Juliane von Westerholt,

In response to your request for input from local residents, I wish to comment on the proposed Official Plan amendment/ Proposed Zoning By-law amendment for a 13 storey building on the current Dettmer site on Belmont Ave, Kitchener.

While I have no objection to a planned mixed use residential/retail unit I wish to assert the following:

1. The unit should **not** be permitted to go beyond the current limit of 8 storeys.
Maintaining the current (and relatively recent) by-law of 8 storeys is important in retaining the character of Belmont Village:
    - As noted urban planners and theorists affirm, (see for eg Jane Jacobs, Edmund Bacon,Kevin Lynch) buildings higher than 8 storeys damage the relationship between the building and the ground level, (in fact it is actually greater than 4 storeys) thus creating a negative environment for people using the street.
    - The higher the building the greater the disconnect between people and street leading to an increased sense of pedestrian alienation.
    - It is essential that Belmont Ave retains its current village atmosphere, where pedestrians feel welcome. This in turn attracts people to the local shops and restaurants and sustains return visits, supporting local business.
2. A 13 storey building will also increase car traffic to the area which would further undermine the pedestrian environment.
    - Since the building is not near enough to the LRT tenants are unlikely to use it, thereby increasing the likelihood of additional traffic.
3. Intensification is important in preventing suburban sprawl, but larger and higher residential buildings should be placed on the LRT corridor (as the city originally planned).
4. The zoning amendment allowing a 13 storey tower would encourage other developers to make similar demands throughout the remainder of Belmont Village, which is also zoned for 8 storey medium-density.
5. The ground level retail units should be designated for independent business that will contribute to the variety and atmosphere of Belmont and meet the needs of the local residents.
6. The city must require the developers to integrate adequate and appropriate recreational space for adults and children as part of the surrounding ground as well as in the interior of the building. The area is severely underserved in terms of children's recreational spaces and the number of residents in the building will greatly amplify the need for such spaces.
7. The builders must insure all residential and commercial buildings against potential damage caused by the construction of the building itself. Shaking of the ground caused by drilling can severely damage foundations of nearby buildings, as happened to houses on Mary Street in Waterloo during the

construction of the Baur Lofts. We need to know how this will be managed and what compensation will be available to owners whose properties are damaged.

Subject: [EXTERNAL] Reject the 660 Belmont Application for Zoning By-Law Amendment

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Juliane,

I am emailing you regarding your letter to the residents of nearby 660 Belmont Avenue for the Zoning By-law amendment for the developing company.

As a concerned citizen, I hereby ask that the proposal be rejected in its current form for a 13 storey high building. Firstly, Belmont Village has been a historical neighborhood known throughout Ontario for its small businesses and unique storefronts. Such an enormous building will alter this historical avenue and make impossible its friendly and walkable features. A 13 storey high building will take away from the scenic walkable streets and avenues in-and-around 660 Belmont and cause big traffic and an eye sore for Belmont Village and surrounding neighbourhoods.

Secondly, a 163 residential unit is a massive project which will likely takes years to build and cause disruptions for many years for the residents and business around - including our neighbourhood. One could understand if this was a 20 or 30 unit low-rise project, but a project of 163 units is massive and goes strictly against the values, structures and aesthetics of the Belmont Village neighbourhood and residential buildings. Therefore, this proposed zoning should be rejected by City Council given its altering and disruptive feature including a massive building which goes against the Belmont Village culture and neighbourhood.

Thirdly, given the current realities of Covid-19, citizens and people are moving away from the apartment/condo living standards and looking for more space and neighborhood friendly places to live. We can see the exodus of people from condos and apartments as we speak. In addition, Kitchener-Waterloo has already an abundance of such large apartment buildings and condos, which frankly, are sitting empty. You just need to walk down King Street and see all the "for-rent" signs especially in the student friendly neighbourhoods. This is alarming given that Waterloo Region may not see over 50,000 students and international students ever return to the area, resulting in a massive disruption to the local housing and apartment markets. There is no reason why City Council should approve such a building in this neighbourhood given the realities and effects of Covid-19 as stated above.

We hope that the City Council will look into these neighbourhood issues and take into consideration the concerns of its residents.

Regards,

142 Wood St., Kitchener

Subject: [EXTERNAL] 660 Belmont Ave proposal

Dear Juliane,

I just wanted to write a quick note about the proposed 13 storey building at 660 Belmont Ave in Kitchener.

My family and I live in the Belmont Village area, just north of Union. In general, we support more housing in Belmont Village and the development of the site. It's a great area in the city, and we hope it continues to grow! My feeling however, is that the city should require the developer to build within the existing zoning regulations (i.e., an 8 storey building). The zoning map was just redrawn, and city planners felt that 8 storeys was appropriate in that location.

I can understand an exception in unusual circumstances where the proposed development is truly unique or has some unusual features that would benefit the neighborhood and would not be possible at a smaller scale. But that is not the case here -- it is just a typical condo/apartment building.

Thanks for your efforts in planning for the city!

Best Regards,

Garett Stevenson

Follow Up Flag: Follow up
Flag Status: Flagged

Hello Juliane
. thank you for organizing the Dec.17th community meeting concerning the 660 Belmont Ave site development proposal
. I thought the meeting was well structured, flowed well and was very informative...
. we live in a home on Dunbar rd. and travel to/ through Belmont village by foot (mostly)/ auto 3-4 days a week all year round for over 30 years....we know the vibe/ feel of the street and how it has changed and evolved over the years
. we also realize that it can be and will be intensified under existing city by-laws and new provincial legislation and support that
. the Zehr development seemed reasonable to us and although it is higher than we would like to see were pleased to see the attempt to reduce the actual building footprint to allow for and encourage pedestrian activities and destination/ place making
. **our one major request is that the City of Kitchener develops an overall future plan or special guidelines for Belmont Village**
. most neighbourhood residents are aware that developers have already been assembling properties on both sides of that street
. there is a chance to retain some of the village destination ambience and welcoming feel that this area has but the City should guide this....developers will not have the same approach ...they have an inherent conflict of interest
. most neighbours we talk to have an uncomfortable feeling that unless the City steps in, the East side of Belmont may eventually be a solid wall of 13-15 story luxury condos and the other side could be lined with 4-6 story mid rises (after successful granting variances of By- Law height exemptions)...and there you go.....2 blocks of solid building frontage rising up
. staffing and budgets are tight at the City and you are working hard....but here is a great opportunity for City planners to create a focal area for pedestrians / active transportation/ mini park(s)/ meeting areas/ destinations for street festivals/ a fountain or water feature/ street trees/several new access points to the Iron Horse Trail - to name a few of the exciting possibilities to choose from.
- the City of Kitchener could be a leader in Urban Design Guidelines for areas such as Belmont Village...
- there can only be one time for such a plan and the time is NOW
- I'm sure the citizens would support you in this

Sincerely,

Garett Stevenson

RE: 660 Belmont LP Zoning By-Law Amendment and Official Plan Amendment.

Hello,

I know there will be further discussion regarding the proposed building on Belmont so I will keep my comments brief. We have lived on Wood Street for 17 years.

We are opposed to the amendments proposed by 660 Belmont LP to build a 13 storey building.

It is fully understood that the current zoning allows for an 8 storey structure - even this size of bulding in Belmont Village seems obuse and out of place.

I encourage the City Council to refuse the application for the current amendments and keep the building to 8 storeys.

Increased vehicle traffic, degrading of "Belmont Village" (one doesn't think of villages having 13 storey buildings) are just a few concerns. Even allowing 8 storeys changes the feel of the neighbourhoods around Belmont Village. People choose to live in this area because of way the "Village" make surrounding streets feel like a smaller community within the larger city.

Thanks for considering my input.

Subject: [EXTERNAL] Fwd: Concerns over 660 Belmont Ave proposal

Follow Up Flag: Follow up
Flag Status: Flagged

Hi,
I was just made aware of the proposed 660 Belmont Ave developent through the Cherry Park Neighbourhood Association. I wanted to raise a few concerns as someone who lives within walking distance from the proposed development. I live on Gage Ave, and Belmont Village is a wonderful asset to our neighbourhood. I support mixed-use buildings that increase the density of the neighbourhood, however I am concerned that this application does not provide sufficient affordable units or accessible units, and that too proposed for 13 stories in an area zoned for 8 stories.

I have read that the proposed building does not include affordable units under the City's benchmark. I strongly support encouraging mixed housing that includes affordable units as well as accessible units for persons who need physical accommodation (including barrier-free parking). These are important to ensure our city is a welcoming place for all walks of life. Is there a mechanism to require the developer to include more accessible and affordable units? I am also concerned that increased traffic on Belmont Avenue in that area would increase hazards for pedestrians crossing Belmont Avenue (especially elementary students walking towards St. John's school), and I would appreciate knowing what plans may be made for pedestrian safety.

All the best,

Garett Stevenson

Subject: [EXTERNAL] Concerns about the proposed building at 660 Belmont St. Kitchener

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Juliane,

I'd like to voice my opposition to the proposed building at 660 Belmont St. In Kitchener.
My family and I have lived in the Belmont Village community for nearly 30 years and I am very concerned and disappointed that the city of Kitchener has approved the building of an apartment complex at 660 Belmont St. I believe it will negatively impact the charm and beauty of Belmont Village. The beauty of Belmont Village is the small shops and businesses that line it. Building a large apartment complex will destroy that charm and open the whole village to increased traffic and stress on the community. Not only that but the aesthetic charm of the village will be destroyed by a new large building that will not fit in with the established design of Belmont Village.

On a much more personal note, our house at 31 Earl St. faces Rock Ave directly and therefore also 660 Belmont. An apartment building there will significantly affect our view of sunrise, moonrise and the skyline and trees that line the Iron Horse Trail. What this will mean for us is that all we will see is a large structure instead and the subsequent unnatural light pollution as well. I am so upset that we are faced with this possible change to our view of our Neighbourhood now and the future negative affect of the value of our home due to this apartment towering over us.
I am requesting that you take our concerns into consideration when approving this building and especially the request to make it even higher!
Thank you for considering my concerns as you prepare your report on this building proposal for Kitchener city Council.
Sincerely,

31 Earl St. Kitchener

Subject: [EXTERNAL] meetings concerning 660 Belmont Avenue West

Dear Ms McCallum and Ms von Westerholt,

We would like to attend the scheduled Feb 25 Zoom meeting.

We live at 725 Avondale Avenue, Kitchener -- 2 blocks from Belmont Village and the Iron Horse Trail. Both these entities are dear to us. One of the reasons we moved to the Westmount neighbourhood 15 years ago was access to these two community gems.

We see absolutely no reason why the proposed development on the Dettmer site (660 Belmont Avenue West) should be allowed to go ahead, bypassing the Official Plan, land use designation, and zoning, and setting a bad precedent for other such "developments".

In addition, we see no rationale for the city to be selling Belmont Lane to the developer and for the developer to be tearing down trees along the Iron Horse Trail. We in KW need much more greenery, not less!

Incidentally, we never received the letter of August 7 referred to in your letter of invitation to the Feb 25th meeting. Nor did we receive from you the invitation itself. We only learned of the Feb 25th meeting from a neighbour.

Thank you for your consideration,

Sincerely,

Garett Stevenson

==========

Hi Margaret,

We just sat through the Zoom meeting on Zehr Group's request for a variance. We don't know what you thought, but we got the distinct impression that the project is already a done deal in the Planners' minds. Their purpose was not dialog, but only to hype the project to us -- with the help of an hour of free advertising-time given over to the developers' PR people. Frankly we are quite depressed about how things are proceeding.

If the Planners were honest they would say something like this:

"There's a conflict between the city's intensification plans and the need to preserve the character of Belmont Village. We are trying to resolve it as best we can, and we are anxious for community input". If they had said this, it could be the basis for a fruitful conversation. (Or perhaps they should have said: "These developers have a lot of clout and we need to balance their need for profit against the future of Belmont Village." Or is this too cynical of a suggestion?)

As far as the developers' presentation goes, it can't be called anything but insulting and patronizing. They want to do us the favour of removing the poisonous foreign-immigrants from along the Iron Horse Trail (i.e. the trees)! They are making the building taller in order to be nice to us; otherwise they would have to fill up every square metre of horizontal space on the site! Then they tried to distract us into reinterpreting height limits as limits on the number of stories...

Did you see in the Q&A box, how one person summarized the Zehr Group presentation: "Belmont village is a dump and we are going to make it beautiful for your benefit"

For our part, we are not opposed to a new building on that site, if more residential units are needed. Something of 4 or maybe even 5 stories might make sense, while preserving the character of Belmont Village and minimizing the impact on the surroundings. But it's clearer than ever that that is not the intention of these developers!

Warm regards,

Hello

Thank you so much for taking the time to write and express your thoughts and concerns with regards to the proposed development at 660 Belmont Ave. I too live in the neighbourhood right behind Westmount School and I am a frequent visitor and love our Belmont Village.

I have copied in Juliane von Westerholt who is the Senior Planner from the City of Kitchener on this proposal. Juliane will be preparing and bringing forward to Council the Staff recommendation on the proposal. She is collecting feedback from residents which will play a part in her recommendation.

I am glad that you have sent in your request to join the meeting on the 25th of February as it is important that all who are interested receive the information and have the opportunity to answer questions.

In addition, you can be in direct contact with Juliane and please copy me in as well as I like to be kept in the loop.

Thanks again for your interest and engagement!

Kind Regards,

Margaret

To: Margaret Johnston <Margaret.Johnston@kitchener.ca>
Subject: [EXTERNAL] Belmont Village official plan

Hello Ms. Johnston,

I have lived at 175 Union Blvd in Kitchener for the past 26 years. Belmont Village has always been an area that my wife and I have frequented for many reasons.

I understand that there is a new development proposed at 660 Belmont Avenue West. I would like to become better informed about what the City of Kitchener's official plan is for Belmont Village from Union Blvd to Glasgow St.

Can you please help me by providing the contact information of the person who would be able to help me with this. I have sent an email to Joanne McCallum at the City of Kitchener asking to be included in emails and Zoom meetings regarding Belmont Village but there may be someone else who could provide the specific details.

While I'm not opposed to intensification I feel that Belmont Village is a unique area in the city of Kitchener with regard to ambiance and commercial activity. The developments in downtown Kitchener have by and large been what would be expected in a downtown core of a medium sized city that is growing.

The city council has made good forward thinking decisions in the past. The U of W school of pharmacy and WLU school of social work along with the Innovation District are all fine examples. As well, King St E. is looking very promising.

Belmont Village does not have the characteristics of a downtown core. It is actually the antithesis of a downtown core. It would be a shame to sacrifice the character of Belmont Village by making short term and poor development decisions.

I am not so naive as to think that any development will be rejected by council since intensification is a government mandate. However, I would expect city council to think long and hard about what kind of development they approve for Belmont Village. In situations like this you only get one chance to make the right decision. 660 Belmont Ave is not the only piece of land that is earmarked for development in Belmont Village. The parcel between Union Blvd and Hoegler's pharmacy will likely be redeveloped as well. If much care and consideration in development approval is not applied to the sensitivity of the Belmont Village the character of the Village could be changed for ever.

You are no doubt aware of some examples of poor decisions in development approval over the years in Kitchener, such as the old city hall/Eatons/market complex and the King Centre to name two.

I feel that the City of Waterloo council has done a very poor job in their approval process for large highrise buildings. It shows in what they have approved. I often walk in uptown Waterloo and King St. North and I never cease to be amazed at how they have squandered so many opportunities.

I appreciate the opportunity to provide my input in this letter and I look forward to receiving the contact information that I requested.

Best regards,

Garett Stevenson

Subject: [EXTERNAL] Re: 660 Belmont Avenue West - Small Group Meetings

Hello Garett,

I have a few concerns about this project.

The primary one has to do with the height of the proposed building. If I understand it correctly, the Official plan allows for a building of 8 stories and 25 metres in height. If the building is classified as "mixed use", this can change to 12 stories and 37.5 metres without an amendment to the official plan. The proposed building is 13 stories and 49 metres. I feel that the application to go from 37.5 metres to 49 metres should be rejected by council.

The official plan allows a building of 25 meters. If the building has mixed use, the building can be 37.5 meters (an increase of 12.5 meters or a 50% increase of height from the allowed height in the official plan). By allowing a building of 49 meters to be approved there will be an increase of 24 meters from the official plan (which is an increase of 96%). I view this as an extreme example of incrementalism that will establish a poor precedent for future development along Belmont Ave.

If this amendment is approved, I see no reason why other developers will not see this as a precedent and make similar or even more aggressive applications in the future. We will then see the adage of "give them an inch and they'll take a mile" being commonplace.

I also feel that the City of Kitchener should develop a master plan for Belmont Village. Belmont Village is marketed and promoted as a "village" by the area's BIA. There is no question that Belmont Village has evolved over the years, going from being anchored by three service stations/garages along with a Beer store and Zehrs grocery store to a rather quaint mix of owner operated retail stores and restaurants and other commercial businesses. This type of commerce is unique and has been successful both for the business owners and patrons. It is very rare to see a business site vacant for very long. The same can,not be said for other commercial retail areas in Kitchener or Waterloo (ie. the Shops at Waterloo Square, Bauer Lofts or downtown Kitchener and Uptown Waterloo). New development is expensive and in order to make a profit the landlords need to charge higher rents which then trickle down to the more local, established and independent business owners. This is what has happened on King Street in Uptown Waterloo .

Lastly, there is the concept of design and architecture, which I admit is subjective. When I listened to the representatives of the planners and architects of this project on the last Zoom meeting call, it seemed clear to me that they expressed the opinion that Belmont Village consisted of a number architecturally insignificant buildings and what they were proposing to build would be such an improvement that one might be of the impression that they were "saving" the village. I feel in fact that the proposed condo does not add anything of architectural significance or style to the area. It is really no different to what we have become accustomed to in the new builds in Kitchener or Waterloo.

This thought process of improving The Village and Iron Horse trail even extended to the fact that the trees that are to be removed are of non native species and therefore the birds and bees and other natural beings would benefit by these being replaced by more appropriate trees and vegetation. I believe that this site will be completely clear cut of any trees to facilitate the construction and then these trees will be replaced by saplings which will take 10-20 years to mature. Artist renderings, such as the ones used in the presentation, do not accurately reflect reality.

I am not against development and intensification. I know that it is mandated by the province and it makes good sense on many levels, however, I do not feel that the only way to intensify is by building large towers. It just happens to be the easiest way. I feel that there is no reason why the City councillors and planners can't take time and make decisions that will ensure that our city and region becomes known for being a leader in thoughtful human scale intensification. There are many examples of this and I know that as planners you study and research them. The ones that I have experienced such as Cook St. Village in Victoria, Wortley Village in London and Hess Street Village in Hamilton have created successful and enviable environments . Why not give it a try here?

I would be able to attend Session 3, March 16/21 - 6:30 p.m. - 7:30 p.m.;/ Session 6, March 18/21- 12:30 p.m. - 1:30 p.m./ Session 7, March 18/21 - 2:00 p.m.-3:00 p.m.; Session 8, March 18/21 -6:30 p.m. - 7:30 p.m.

Please advise me of which one works best for you.

Regards,

Hello,

As mentioned during the Neighbourhood Information Meeting last Thursday, I am going to be facilitating small group discussions regarding the development applications for 660 Belmont Avenue West.

We acknowledge that the large scale digital meetings clearly have had some unintended consequences that we want to opportunity to address. While large scale meetings like the two already held in December and last week are efficient in sharing information, we know they need to be supplemented with opportunities for two way dialogue between City staff and yourselves.

I am reaching out today to invite you to RSVP for one of the small group sessions. I kindly ask that you identify your top 3 preferred timeslots. These meetings will have a maximum attendance of 15 people each to ensure that everyone will have an opportunity to speak and share their perspectives and ask questions. Additional meetings may be scheduled to accommodate everyone's availability if the 10 scheduled sessions below fill up, or if you cannot attend at these times.

To register, I kindly ask that you respond to me by email with the following information:

1. **Please select up to three sessions that you are available to attend.**

Session	Date	Time
Session 1	March 16	1:00pm - 2:00pm
Session 2	March 16	2:30pm - 3:30pm
Session 3	March 16	6:30pm - 7:30pm
Session 4	March 17	9:30am - 10:30am
Session 5	March 17	12:00pm - 1:00pm
Session 6	March 18	12:30pm - 1:30pm

Session 7	March 18	2:00pm - 3:00pm
Session 8	March 18	6:30pm - 7:30pm
Session 9	March 19	8:00am - 9:00am
Session 10	March 19	3:30pm – 4:30pm

2. Please identify the main topics you would like to discuss during the meeting.

3. Please confirm how many people will be attending with you.

I commit to:

- Confirm which session you have been scheduled for within 3 business days of receiving your request.
- Provide the Zoom link for your session the day before it is scheduled.
- Prepare a consultation report within 3 weeks of the last small group discussion that will include a summary of our discussions, as well as answers to the questions from the Q&A chat function during the two meetings.

I look forward to virtually meeting with you all in a few weeks. In the meantime, the City's consultation website has been updated with additional information from our meeting last week. For more information, please see www.kitchener.ca/planningapplications.

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont Proposal

Follow Up Flag: Follow up
Flag Status: Flagged

Hello Juliane,

I am a resident on Belmont Avenue in Kitchener. I am reviewing the proposal for 660 Belmont.

In my opinion, this Belmont Village area needs a long term vision for future development. The area has potential, in fact it already has many attributes that are pedestrian-friendly and has become a city "destination". It has the potential to be so much more.

A planned pedestrian-scaled area combining retail and residential on both sides of the street should be the goal. Think the newly constructed " villages" in Mt. Tremblant or Collingwood. A pleasant variety of trees, storefronts, turrets etc. mimicking a quaint European village.

This entire physical Belmont Village could be sold to one large developer able to fund one vision that encompasses both sides of the street and make it a true destination for strolling, dining and shopping.

Certainly a 13 storey condo tower does not fit this vision. There are many large towers further along Belmont Avenue West. Let's keep the Belmont block" intact " for retail low rise development with one architectural vision.

The area was renamed "Belmont Village" for a reason. Let's keep it a village feel.

Subject: [EXTERNAL] 660 Belmont Proposal

Mr. Stevenson,

I would like to express my opinion on the proposed development for 660 Belmont Avenue.

Let me first say I am not opposed to Belmont Village being improved .

My position is that we require a long-term planning vision for the Village and that individual proposals, of which 660 Belmont will not be the last, will merely end up making Belmont Village a condo ghetto. Thereby destroying the mix and pedestrian vibe of the existing site.

Can the Kitchener City Council and the planning commission, propose submissions of planning proposals for the entire site from Glasgow Street to Union Street, both sides of the street.

It is my understanding that several developers may have already purchased existing buildings in The Village and are closely watching the 660 Belmont Proposal to action plan their "next steps".

Let's get a long-term extensive plan for the Belmont Village , on both sides of Belmont Avenue and work towards completing a vision that is in the best interests of residents, existing tenants of the village and developers.

Regards,

Juliane
Thank-you for your continued updates and keeping us in the loop. I was unable to attend the last NIM meeting regarding 660 Belmont, but do want to communicate the Belmont Village's BIA thoughts on the project. I do plan to attend the virtual meeting on the 25th.
We feel that intensification and development of the "city core" is inevitable and necessary for growth of Kitchener and by extension the village. Our goal is to maintain the village's unique charm/character and increase the pedestrian friendliness and beautification of the village. We are pleased that 660 is being developed by the Zehr Group who we believe has a similar vision for the village and is reflective in their development plans. Don Zehr and the Zehr family have been involved in the village for years and have championed initiatives and contributed financially through sponsorship of events (IE Bestival). Zehr Group contributed significantly to the planning and financing of the Village Communal Patio that was so successful last year and is committed to help make it even better this year.
The BIA would prefer to work with a developer such as Zehr Group that has and continues to work in concert with the BIA. Zehr Group has a long history and intimate understanding of what the village brings to the surrounding neighborhoods and the City of Kitchener. So although change can be unsettling, we believe it is inevitable and we want to embrace it with a partner such as Zehr Group that shares our long-term vision of Belmont Village.
Sincerely

Subject: RE: [EXTERNAL] Six Sixty Belmont - Parking needs to be sorted

Hi

3 hour parking time limits are not new, but rather are a general provision within the City's Traffic and Parking control by-law. For reference, there are a series of unsigned parking by-laws that do apply to all streets in Kitchener and can be found at the following link:
https://www.kitchener.ca/en/bylaws-and-enforcement/parking-bylaws.aspx

I should note that while there is a 3 hour regulation throughout the City, it is typically only enforced on a complaint basis and should not impact Earl Street residents or their visitors.

As I explained through comment at the public open house, studies indicate that this development will not generate the amount of traffic that I believe the neighbourhood is concerned about. Traffic as a result of these residential units should not be noticeable on the surrounding street network. This is generally consistent with what we have seen in the development of similar sites. The "Trio on Belmont" was used, as an example, to get a better understanding of the amount and type of traffic that can be expected. Further, I do not foresee this development leading to traffic or parking issues on Earl Street. Should parking become a concern in the future, there are certainly mitigating measures (including a permit system) that can be considered.

Hope that this helps to address your concerns. Should you wish to discuss further, please feel free to contact me directly.

Thank you for your note expressing concerns with regards to parking for the proposed 660 Belmont Ave development.

At the beginning of Thursday's Neighbourhood Information Meeting, Rosa Bustamante, our new Director of Planning announced that Senior Planner, Garett Stevenson would be the new contact who would be addressing resident concerns for the proposed 660 Belmont Ave development. To that end, I have copied in Garett who will reply back to the concerns you have outlined below. In addition, I have copied in Barry Cronkite, our Director of Transportation Planning for additional comments as he may see fit.

Councilor Chapman and I were present for the entire meeting and made note of the concerns expressed and they will form a part of our decision-making process.

I am very glad that you attended the meeting. Thanks for taking the time to do so. I really appreciate the level of engagement in the neighbourhood.

Ms. Bustamante also announced at the meeting that Garett Stevenon will be organizing smaller group meetings. He will be sending out information on that soon for those residents who may wish to participate.

Thanks again

Kind Regards,

Margaret

Subject: [EXTERNAL] Six Sixty Belmont - Parking needs to be sorted

Hello Margaret, Debbie, and Juliane,

Thank you for the information meeting last night.
Margaret, I've voiced my concerns to you previously, but after last night's meeting they have become more predominant.

My question is: Why can't the developer dig deeper to create a larger parking garage to accommodate all units?

My concerns that I would like to formally document and would like addressed are as follows:

- 27 usable parking spaces on Belmont Ave is not enough to share between commercial and residential patrons. Let's be realistic.
- 3 hour parking on side streets such as Earl Street is not acceptable to me, especially considering that most of the homes are single-lane driveways. My family requires road parking regularly to use our front yard and allow our children to safely play on the driveway or in front of the house. Part of the reason we moved from Gildner Street to Earl Street was due to the unlimited street parking. We also want guests to be able to visit us without parking restrictions. This is our home.
    - If this is to move through, will each household on Earl street receive a parking permit for their road so we do not have 3 hour constraints? This needs to be considered as a compromising factor.
- The additional traffic that will flow through Earl Street - again, because of the safety of my children. Especially since Belmont Ave will have lane restrictions in the summer (which is great because we love the restaurants and walkable destinations), but cars will cut around. How will we control it?

I will keep an eye out to join the small group discussions when the invite goes out. In the meantime, please **please** consider my concerns. I know I represent others on our street as well and am not the only voice.

Margaret & Debbie - if I need to provide further details, or signatures on a petition, etc, please let me know what I can do to ensure my points are considered.

Thank you,

111 Earl St.

Subject: [EXTERNAL] Thoughts on the development at 660 Belmont Ave

Hello Ms. von Westerholt,

I reside at 460B Belmont Ave W and frequent Belmont Village. I have a few thoughts to share regarding the 660 Belmont LP development's impact on the surrounding area.

First off, I really like the idea of having an apartment building with ground floor commercial space in Belmont Village. I think this will be great for the community.

I am concerned about the street parking situation considering the number of planned underground parking spots. I would strongly prefer if the new structure had enough capacity for every unit to have 1-2 parking spots without relaying on the surrounding streets.

My second concern is about the proposed height of the building. I think the city should maintain the 8-storey limit. I think a 13-storey structure would dramatically change the feeling of the neighbourhood and the shadows would negatively impact Gildner Green and surrounding areas. At the very least, I think 10 stories should be the maximum.

Thank you for your consideration.

Sincerely,

1110-460B Belmont Ave W, Kitchener, ON, N2M 0B3

Subject: [EXTERNAL] Belmont development

Hi Juliane,

I read the urban design report and I had some feedback I wanted to share.

In general, I strongly support densification. Our city needs more housing, as it's quickly becoming unaffordable for many. But we need to ensure that new developments are a benefit to the current community as well. As such, I think with some fair and reasonable changes (and I'm sure others will suggest some excellent ones I have missed as well), this development can be a great addition to Belmont village.

2 car private parking garages: it looks like several parking spots are 2 car private garages with attached storage area. It seems this is a very inflexible design because it would be difficult for 2 x 1-car families to each use one of the spots. Given that many residents choose the village because of its walkability and connections to transit and cycling infrastructure, the presumption should be that few, if any, families in the building will have 2 cars. I'd suggest these be changed to normal parking, with a separate area for storage units, as is more commonly found.

Further to the above, in order to help ensure families don't need to be as dependant on car ownership, some parking spaces should be reserved for car share. I'd suggest at least 3 (1 per 60 units, rounded up). Ideally these would be surface spots to increase visibility of car share as a viable alternative to car ownership. Additionally, I believe more parking for bikes should be provided, both easy access surface spots (shockingly, this is currently only planned for 10 bikes), and underground for winter storage (currently only 82). Many units will have multiple residents each with bikes, so a lot more is needed. I also don't see any planned easy access storage for strollers, which are of course a necessity for a family to be able to have a walkable lifestyle.

Unit mix: I was very happy to see 40% of the units are two bedroom. It's a big problem when developments are proposed with too much focus on 1 bedroom units. However, I was disappointed to see no 3 or 4 bedroom units. Families often need at least 3 bedrooms, particularly if they have a boy and a girl. I suggest that at least 10% of the units be reserved for 3+ bedroom units to better accommodate families.

Finally, as the first floor will be commercial space, we need to ensure that it will fit the needs of the community. There are many families in the area (and this development will hopefully bring many more), and many workers (as an up and coming area, the number is quickly growing), but yet there is no daycare center in the village. The developer should commit to reserving some of the commercial space to meet this need, perhaps even providing reduced rent to a non-profit.

The developer is asking to go above the current zoning for height, and I feel these modifications to the current proposal would be a fair trade for the community, and would likely make the new units themselves more appealing as well, which would of course also benefit the developer.

Thank you for considering my feedback regarding this proposed development.

Garett Stevenson

Subject: [EXTERNAL] Regarding 660 Belmont Ave W

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Ms von Westerholt,

My husband and I live near 660 Belmont Ave W and I write to you today with our feedback on the proposed zoning change to permit a 13 storey mixed use building on that site.

We are very much in favour of intensification and infill, but feel that a building that tall would be out of proportion in that location. The tallest buildings along Belmont Ave W between Union Blvd and Glasgow St are two storeys. The current mixed-use designation for a building of 8 storeys would be much more in keeping with the location---more mid-rise buildings in that area would be great! So we oppose the owner's request for amendment to the designation and zoning.

Another issue, unrelated to the building's height, is whether is it slated to include any affordable housing. It is important that new developments in the neighbourhood provide needed housing for everyone.

Finally, in regards to parking, we would very much like to see a requirement for a certain number of charging stations for electric vehicles. New buildings need to help us move away from fossil fuels, not lock folks into internal combustion engine cars for decades to come.

Sincerely,

806 Belmont Ave West
Kitchener, ON N2M 1P4

Madame,

I wish to register my absolute objection to the developer's proposal to construct a building that is more than 50% taller than current zoning provides.

The game, in this case where the developer asks for "13" probably hoping the city will compromise and grant at least "11", is one in which the city seems a too willing participant.

If thoughtful planning informed zoning for an 8-storey height restriction on this site, and one would hope it was thoughtful planning that considered the impact of such structures on the neighbourhood, then hold the developer to that. Otherwise, zoning is a joke.

Please keep me informed of developments on this site.

Thank you.

Hi Juliane
I am a day late it seems. I will still send. I strongly object to the application to permit a 13 storey structure from 660 Belmont LP Inc. I even feel the 8 story would look out of place in what is known locally as the village. A 12 storey however would look completely out of place. Belmont village consists of mainly low level structures and aesthetics aside I fail to see why this is even being considered.
Of course the reason is money ...more people, more money, more taxes.
I believe there are more suitable locations along Belmont that have more suitable spots. Heading towards Victoria perhaps facing already built tower blocks.

I hope council keep in mind the residents who live in the area who have seen unprecedented growth of buildings in the last few years.
I just hope Belmont village can maintain the village feel which attracts many people.
The last thing I would hate to happen would be for it to end up looking like a sore thumb which I believe a 12 storey property would undoubtedly look like.

Yours respectfully

Hi Ms. von Westerholt,
>
> Writing in response to the request for input on 660 Belmont LP Inc.
>
> I am not in favour of this application to change the zoning by-law for the following reasons:
> 1. There are no plans, drawings,etc. available to see what the
> developer has in mind 2. No mention of any traffic studies or
> environmental impact for any development of this sort - also the
> traffic study needs to be done during non-pandemic time period to get
> an accurate measure 3. This is currently zoned for an eight storey mixed use development and there should not be a need to change that as that is keeping more in line with what is currently in the Belmont Village area - none of the other buildings are over three stories in height (there are structures further down Belmont that are more than eight stories but they are not part of the Village area) 4. This notice was sent out with a very short period for responses given that there wasn't documentation available and it was during summer vacation time for many people so they may not have had time to review and reply. As well, this had a very limited audience (primarily one side of Earl Street and Rock Ave.) and should have been sent to more residents in the area as this development will impact a large part of Westmount 5. There are already issues with parking on the side streets as there is insufficient parking for Village clientele. As parking will most likely be limited for the new development, visitors and other overflow parking will move to the residential side streets, impacting traffic flow and causing congestion in the residential neighborholds.

Senior Planner, City of Kitchener

Re: Proposed development at 660 Belmont Avenue, Kitchener

We moved to this neighbourhood over 35 years ago because of its charming older homes, beautiful tree lined streets and proximity to convenient shopping and services. Belmont Village has grown and blossomed over the years into the desirable destination that it is today. The proposed building would detract from the neighbourhood feel that is quintessentially Old Westmount.

A structure of the proposed height would serve to dominate the streetscape and take away from the delightful village atmosphere of Belmont Ave. Rock Ave would be overshadowed by the structure not to mention the morning sunrises would be blocked permanently.

Increased density, along with the proposed retail businesses will only add to the traffic congestion and parking problems that will undoubtedly flow into the residential streets. Our street (Rock Ave.), is already burdened with the overflow of shoppers from the village seeking parking.

We also have concerns regarding the size of the units being built. Our concern is that smaller units will be purchased for investment purposes and then used as short term rentals leading to transient tenants with no pride of ownership or investment in the Westmount area.
A building with fewer storeys (six being more in keeping with the street) and larger units greater than 1,000 sq. ft. would attract more permanent residents.

The Belmont strip is a wonderful area attracting people from all over the region. We believe the proposed development would take away from the quaint aesthetic and vibe of the village.

The proposed 13 storey (49 meter) building essentially doubles the height of what is currently designated for the street. (8 storeys 25 meters). What value does that bring other than lining the pockets of the builders.

WESTMOUNT
NEIGHBOURHOOD ASSOCIATION

September 28th, 2020

Dear Juliane von Westerholt,

The Westmount Neighbourhood Association has now become aware of the notice the City sent to residents within 120m of 660 Belmont Avenue, where Dettmer Tire is currently situated.

We understand that the new owner of the site is seeking a zoning by-law amendment and an official plan amendment. We also understand that beyond the additional 5 stories the developer is requesting, he is also requesting to purchase the publicly owned laneway that is directly behind the property.

A significant number of our residents have submitted feedback to you regarding this variance application. At this time, our association wishes to be included on all future communications and meeting notices regarding this site. Thank you for keeping us in the loop.

Residents of Westmount feel very fortunate to live adjacent to such a charming and vibrant place in our City — an area that really has become a destination for all in the City. And we are pleased that such a reputable, local developer has selected a site in our community and wishes to revitalize our Belmont Village.

But, as an association, we have some very important questions about this application and future development in our Belmont Village. Specifically, we are concerned about the impacts this, and other development, will have on our neighbourhood — increased traffic volumes and increased demands on our very limited, public green spaces and parks.

To this end, we request the City consider conducting a special study of Belmont Village. We understand that such a study commenced in the early 2000s, but was then abandoned. Now, more than ever, a study will be essential in preserving the unique gem that is Belmont Village. Such a study and plan will ensure an aesthetic and conceptual cohesion between all impending development. Such a study and plan will ensure Belmont remains unique and a benefit for all in the City.

Although our neighbours have varying opinions on the specifics of this application (many having significant reservations and some excited to see new development in our area), everyone tends to agree that we want to maintain and improve the Village — we ask that a special study be done so the charm, neighbourliness, and village-like feel of Belmont Avenue is maintained through future development.

The Westmount neighbourhood is known for its community-mindedness, walkability, environmentalism/conservation of its green space, and its unique sense of place — we wish to see these attributes continue to be reflected in our local commercial area know as Belmont Village.

Best Regards,

Jill Klepacki

Re: Zoning By-Law Amendment application Dettmer Tire property on Belmont Ave, Kitchener

Dear Ms. von Westerholt,

I wish to register my objection to the proposed Zoning By-Law Amendment re the redevelopment of the Dettmer Tire property, as described in the zoning amendment application currently before the Planning Division of the City of Kitchener.

I wish to outline the basis for my objection in the following.

As a long-time resident on Union Boulevard of this Old Westmount neighbourhood, I am very familiar with the residential area, between Union Boulevard and Glasgow and Belmont and Westmount, and the commercial area on Belmont Ave, between Union Boulevard and Glasgow. I have witnessed gradual changes in the resident demographics, primarily the attraction of this area to young families with small and growing children, who are bringing new vitality. The residents cherish the serenity , privacy and exclusivity of this Old Westmount area.
The businesses on Belmont are 'neighbourhood businesses'. They are very conscious of this and endeavour to maintain the general 'Belmont Village', neighbourhood characteristic. The current Dettmer Tire business fits this characteristic.

While redevelopment of the Dettmer Tire site may be inevitable, it should, however, also fit physically, aesthetically and visually into the Belmont Village character and residential area to the largest extent possible. To encroach on and compromise this residential and commercial area with a high-density, high-rise building will result in an irreversible trend to lose the Belmont Village character and, no doubt, add an estrangement element to the location. The current planning restriction, as it is, of buildings to a maximum height of eight stories, is barely cognizant of this Village environment, whose attributes area residents value and desire to maintain.

An application for an apartment building with a height/size vastly in excess of the present zoning restriction, in this case thirteen stories, appears to squarely contradict the tenets that make this area so desirable for residents and small, primarily retail, businesses. I wish to impress upon the Planning Division the significance and importance of its critical role in maintaining the present planning and zoning standard which, in my opinion, it has a responsibility to safeguard and uphold.

I wish to summarize: I object to the zoning amendment for the Dettmer Tire property because this Old Westmount area's unique residential and small business character will be permanently adversely affected and ultimately lost. I trust the Planning Division of the City of Kitchener will insist on maintaining the current planning limits with regard to any redevelopment of the Dettmer Tire property.

Sincerely,

215 Union Boulevard,

RE: Proposal to Change the Zoning for 660 Belmont Avenue

Dear Ms. vonWesterholt:

Thank you for the opportunity to respond to the application regarding the rezoning of 660 Belmont. The proposal is to amend the land use designation and zoning of the lands to allow for the construction of a 13 story mixed use building. The current Mixed Use designation allows for an 8 story structure.

As a long-time resident of this neighbourhood, I have witnessed the changes in Belmont Avenue over the past three decades and watched with delight as, even in the midst of a pandemic, the plaza has continued to be a unique and thriving commercial area, serving both the surrounding neighbourhoods and as a destination spot for the wider community.

There are many things that have contributed to the unique character of Belmont Plaza. The variety of interesting and useful shops, services and restaurants; its human scale and walkability; the proximity of parks; the Iron Horse trail. I appreciate that it is an area that seems prime for intensification and attractive for redevelopment. However, I believe that the scale and location of this proposed development of 660 Belmont would so change the character of the plaza as to jeopardize the very qualities that make this such a thriving area. Consequently, I am writing to register my deep concern with this proposal. The issues which particularly concern me pertain to the scale of the development, in relation to the surrounding neighbourhood; the precedent of this revised zoning on the future of Belmont Plaza; and the lack of green space that would be available to mitigate this change in usage.

As you are aware, the current, maximum height of properties along Belmont Street, between Union and Glasgow, are two stories. This proposal would almost double the current zoning allowance for the site, from 8 stories (25 metres) to 13 stories (49 metres). This would result in a building that would dwarf anything else in the plaza. While, it could be argued, this height would be comparable to the near-by apartments and condo towers bordered by Mt. Hope and York Streets, or the apartment towers further south on Belmont, between Glasgow and Victoria, this proposed development would have none of the green space available to those other sites to provide a transition with the surrounding properties. Consequently, in what has been a low-rise neighbourhood of businesses and single-family residences, this development will forever change the plaza. It may also, I fear, set a precedent for future such applications for high-rise development along Belmont.

I am not opposed to intensification. Indeed, Kitchener has done an excellent job along the LRT corridor, allowing for multi-story projects that are part of a long-term plan for urban re-development. I applaud such efforts and the thought that has gone into them. However, that is not what we are talking about with this current proposal. This proposal is not, as far as I am aware, part of a master plan redevelopment for the Belmont Avenue corridor. The size of the property, while able to contain the footprint of the building, will not allow sufficient green-space to allow for a transition between the size of the development and the surrounding plaza and neighbourhood. Consequently, I am concerned that this exemption to the current zoning and master plan would set a long-term precedent, from which there will be no turning back.

This being that case, I must express strong concern with this proposal.

Thank you for your consideration in this matter.

Sincerely,

Cc: Margaret Johnston, Ward 8 Councillor, Kitchener

Subject: Proposed changes to Belmont St.

I recently heard about proposed changes and am most concerned that the integrity of the quaint village will be compromised if these highrises take place. I am on the Bestival committee, specifically dealing with analytics and grant writing. With the exception of this past year, due to COVID, our Festival has been gaining popularity and has grown exponentially due to the viability of local restaurants and shops. It is most distressing to think of this local gem being destroyed by highrise constructions taking over.

Subject: [EXTERNAL] Proposed development at 660 Belmont

I live on Glasgow Street near Dunbar. I am writing to express my adamant opposition to one aspect of the proposed development.

The height of the proposed building is in my view completely unacceptable and should not even be entertained by council. To propose not just increasing but actually doubling the height of the building is both absurd and an insult to the residents of this community. The developer should be shamed for making such a ridiculous proposal.

The reason for proposing such an extreme increase in height seems obvious to me: to allow the developer and Council to be seen to be "compromising" on a height which is less than 49 metres but more than 25 metres, allowing the developer and Council to present themselves as "good guys" taking the interests of the neighbourhood into account. No thoughtful person will be fooled by this approach, if it is fact the one taken.

We already have a compromise: it's the height called for in the existing by-law---25 metres. That height is already a compromise between the need for higher density housing in the city and the existing reality of one of the most beautiful residential area in the city, which consists of two-story houses. I am not anti-development. But I am against building what will no doubt be the first of many structure on the north side of Belmont which will destroy the character of the neighbourhood.

The developer knew the height restriction that applies to this property when they bought the property. So did house buyers in the neighbourhood who were interested enough to find out, when they purchased their properties. Why should there be a violation of this implicit agreement in order to favour of the interest single member of the community?

It makes we wonder if we as a neighbourhood association would be free to make our own proposal for an exception to the by-law. I'd like to propose that the height restriction be 10 metres, say. Would Council entertain such a proposal? (Not likely.) Then we could "compromise" on 25 metres—the height already allowed under the by-law.

Dear Councilor Chapman,

I am new to Kitchener and your ward. I recently received a notice in my mailbox regarding the development at 660 Belmont Ave. W. and wanted to write to you in order to voice my support for increased intensification/development in our neighbourhood. I do, however, have two specific concerns regarding this development as proposed. 1. I am disturbed that there will be no affordable units in this development and I would urge the city to mandate the building of affordable units at this location. 2. I believe the city should also ensure that there are larger units (3, or 3+ bedroom units) at this location in order to ensure an increase in appropriate units for families in the region. I hope that it is not too late for me to give feedback on this development.

Thank you for your work as Ward 9 Councilor.

Kind regards,

Subject: Zehr's proposal - Belmont Village

Hello Garett,

Even though I do not live in Belmont Village I do live nearby and love this unique section of the city. After reading the article in The Record I have not been able to shake the idea of contacting you to add my voice of concern about this plan. This business area draws people from all over the city and is not strictly an issue for only those living around the development ! I feel changing the zoning to allow this 13 stories is not the best move for the city. Please, 8 stories is quite enough. Once you do this, the "village" will soon disappear as towers take over. I believe I read that Mr Zehr has other properties there and I wondered if he could add stories to those buildings to get more residential units ?

As you said, it is a challenge to try to balance all these needs. I am a small time real estate investor so I get it! However, with downtown looking more and more like Toronto, the effects of the changes you allow here, and elsewhere in the city, may destroy our little pockets of distinction.

I am pleased that this developer has shown an interest and appreciation for the Village atmosphere, so I hope a way can be found to compromise. It has a charm not found elsewhere and that makes it precious.

I would like to say that the changes made to the sidewalks and street last summer was fantastic ! It is a shame it didn't receive more press as a lovely spot to enjoy a meal safely outside with others. Loved the fake grass !

Thank you for the e-mail.

As nearby neighbour to the proposal (I live on Walter St. near Park St.) it's great to see this form of development being introduced to the area. While I felt the original height and unit count of the building was appropriate for the site, the revised proposal looks great as well.

I would like the opportunity to express my support for the proposal at the upcoming council meeting.

Thanks again for reaching out.

Cc: "Garett.Stevenson@kitchener.ca" <Garett.Stevenson@kitchener.ca>
Subject: Your support & input is needed: The revitalization of 660 Belmont Ave. W.

I hope you are doing well.

First and foremost, we would like to thank you for your ongoing support of the growth, development and prosperity of our city, as Kitchener's population continues to grow at a rapid pace. The expected population boom offers our residents and economy ample opportunity to prosper, but also raises valid concerns related to housing supply shortages and intensification.

It is evident that the region needs to support the growing population and expand home development initiatives with a focus on sustainable and innovative multi-level housing options. For Zehr Group, we recognize we are a vital partner in helping Kitchener become a complete city — by creating thriving, sustainable communities with robust economies, without losing the character of our neighbourhoods.

The proposed redevelopment of 660 Belmont Ave, W. from a one-storey commercial building into an 11-storey mixed-use development is just one example of how the region can introduce a variety of housing options. The redevelopment would add 132 residential units to the highly sought-after Belmont area, with ground-floor commercial space suitable for a variety of essential services, including a food store. It is a prime example of how we can better utilize available space in the region while meeting the needs of present and future generations.
Prior to our council meeting date, we would like to ensure our community has as much insight on the proposal as possible. We invite you to review the attached redevelopment details and images for more information.
We appreciate your support in bringing this proposal to the city council and will be reaching out in the coming weeks with more information on how you can demonstrate your support for the proposed redevelopment and revitalization of 660 Belmont Ave. W.

Thank you for your support.

All the best,

Zehr Group

Subject: [EXTERNAL] Opposition to the Proposed Development at 660 Belmont Ave W

I am emailing you to express my concern over the proposed development at 660 Belmont Ave. W. When I attended the meeting last year given by the new owners, I immediately got the impression that they had absolutely no empathy for the current neighbourhood, only what it can do to line their pockets with more money.

The fact that they won't even consider building something within the current guidelines really drives that point home because, lets face it, taller buildings means more money for them and let's not kid ourselves, does absolutely nothing to improve the neighbourhood.

I have a friend who currently lives in a rent controlled apartment above the May Court store. I know that once the developers get permission to tear down that set of buildings, she and likely others in those apartments, will not be able to afford to live in the area any more.

Belmont Village is meant to be shared by everyone in the city, not just the ultra rich. The current vibe is so special, please let's not ruin it by allowing this monstrosity to be built in this gem location of our city.

Thanks for listening.

RE: follow up response to the City of Kitchener Planning department regarding the Zoning By-Law Amendment Application for 660 Belmont Residential redevelopment Project: **ZBA20/012/B/JVW**

Mr. Garett Stevenson, MCIP, RPP

I wrote back on the 23rd of February 2021 to share my views and support for the proposed development noted above. I also participated in the 660 Belmont Avenue West - Small Group Virtual Meeting on March 16th hosted by the City of Kitchener.

My wife and I read with great interest the article on November 6th, in the Record and subsequently reviewed the Zoning Bylaw Amendment for this current project application on City of Kitchener Planning web site.

The community input and feedback from the public consultation period has presented opportunities for enhancements to design changes. The revised plans under consideration by Planning Staff appeared to have resulted in a collaborative design, meeting the neighbourhood desires. Our support for the development project remains positive.

Reasons for our support of this project are numerous. Primarily, as part of the "baby boomer" demographics our plans to downsize our home remains strong. We have enjoyed our current home for over 15 years. Having an opportunity to remain in our neighbour hood in a condominium community creates so many benefits.

We continue to spend our time enjoying the services provided in the Belmont Village. What we discovered this summer was a vibrant atmosphere at the "660 Belmont Workshop". The family-oriented activities and entertainment, enhanced with the Chef "D's" temporary outdoor restaurant provided enjoyment for neighbours, friends, and families. The revitalized life this temporary venue brought to area was fantastic. So many comments from visitors noted how great it would be to see more permanent businesses to continue with community spirit. The plans by the Zehr group to add restaurants, bars and a small grocery store will provide for that continued community vibrance.

The plans for the improved pedestrian walkways and access to the Iron Horse trail will add significant value and provide an enjoyable safe family space. The popularity of the trail is growing, but the forward thinking of the Zehr group to improve pedestrian access and provide restaurant services will enhance the uniqueness for this area. The plan has a very relaxing European café flavor.

The Zehr Group does not portray the "normal" definition of a land developer. When the owner and stakeholders live and raise their families in the same community that they plan to develop, it shows significant commitment. The City of Kitchener should be proud to have such committed business leaders in the Region.

Confident once final construction is complete, people moving into the neighbourhood, will have a positive impact of the neighbourhood. It will be great to see this project become a neighbourhood friendly fixture.

My wife and I remain very much in favour of the proposed development and as a potential future home. We look forward to the final staff report presented to Council. Thank you for the opportunity to provide feedback during the planning approval process.

Respectfully Submitted,

I am utterly and completely against the high rise development planned for the northeast corner of Belmont and Glasgow. The building would seriously degrade the quality of life of the many people who enjoy Belmont Village. Belmont Village is not near the Ion public transit route. Moreover, neither Union St nor Glasgow St is an east-west intensification corridor in the City's growth plan. Such ad hoc development will undermine the value of the thought-out planning of, and by, the City.
Eight stories is already more than enough for this area.

Dear Garett,

My husband and I are community members who recently moved to the Belmont village area. We are located directly behind the Rexall on Mt Hope street.

We are writing to you in regards to the proposed development in Belmont village. As younger adults we understand the need for more affordable housing, however, what drew us to this area is the community and quaint feeling that Belmont village offers. It is a very unique part of the city that has has its own identity. We feel that a large building directly in the village will be an obstruction to the village that our community surrounds and will take away from it's unique presence within Kitchener. We hope you will consider keep the existing height restrictions which exist for a reason- to persevere the villages beautiful inviting nature, and not allow it to fall subject to multiple high rises which we know will be the case if one exception is made.

Thank you for hearing our concerns,

Subject: [EXTERNAL] development at 660 Belmont

Hi Garett,

You might recall that I attended one of the information sessions earlier this year regarding the proposed development at 660 Belmont.

I wanted to write to express my opposition to the planned development. I recognize that we are still waiting for an updated plan from the Zehr Group, but I would be opposed to anything over the normally-allowed height of 25 meters at that location. Belmont Village is a special, unique asset in Kitchener, and what makes it special would be threatened by the introduction of towers of the proposed height. Surely there is a better way to balance the need for intensification with preservation of what makes Belmont Village so special. It is, after all, the attractiveness of Belmont Village that has made it a target for developers in the first place.

Belmont Village was a magnet for so many people from around K-W this summer, with a great vibe from all the outdoor dining and various public events. The Village would lose so much of what draws people to it if the east side of the street were to be turned into a wall of mid-rise towers. Many people like to walk and bike to the Village via the Iron Horse Trail, and the section of the trail that runs along the edge of the Village would also lose much of its appeal if it backed on to a wall of towers.

Thanks for your consideration.

Dear Councillors
I am writing in regard to the planned redevelopment of Belmont Village and specifically the building at 660 Belmont. Please ask yourselves if there really is a need for 13 storey highrise apartment / condominium accommodation, why would 8 storey not be acceptable. That is the bylaw. As noted in previous consultations, a 13 storey building is not compatible with the neighbourhood. There are also concerns the same developers will build another highrise across the street.
The 8 storey height restriction and 1.5 m setback were established for a reason, to maintain a sense of humanity in neighbourhoods increasing in density. Why does Council always make exceptions ? Why continue with the charade of city planning when all a developer has to do is apply for an exemption? Retail shops are planned for the ground floor but insufficient parking is planned. Traffic is already congested in Belmont, why add to the problem when it is unnecessary? Developers should follow the bylaws, same as others.
Obviously the new property owners want to make a profit on their investment but with no regard for the existing community that is already there. If density increases with no adjacent green space, Belmont will become like downtown Kitchener was 25 years ago – a dead community with nothing to attract people to stay. Safety concerns rise, traffic increases as residents seek other replacement stores - restaurants, pet store, drug store, charitable consignment store, florist, and others, and abandonment of the area occurs.
To destroy a successful "village" of small business owners does not fit with the vision of Kitchener as a community of neighbourhoods. Please consider the current bylaws when making your decision about exemptions for this, and subsequent Belmont village developments.

Sincerely

Obviously the new property owners want to make a profit on their investment but with no regard for the existing community that is already there. If density increases with no adjacent green space, Belmont will become like downtown Kitchener was 25 years ago – a dead community with nothing to attract people to stay. Safety concerns rise, traffic increases as residents seek other replacement stores - restaurants, pet store, drug store, charitable consignment store, florist, and others, and abandonment of the area occurs.

To destroy a successful "village" of small business owners does not fit with the vision of Kitchener as a community of neighbourhoods. Please consider the current bylaws when making your decision about exemptions for this, and subsequent Belmont village developments.

Subject: [EXTERNAL] Condos in Belmont Village

Hello,

I would like to be added to the list of homes against the building of high rise buildings on Belmont Village.

The village is quaint and filled with character. With all of the condos being built up around the region, I'd like to see them select another zone since building these obnoxious monstrosities is inevitable but we should try to protect and preserve as many pockets such as Belmont Village.

Thank you,

Garett Stevenson

Subject: RE: Concerns RE: Affordable Housing in Kitchener

Hello,

Thank you for your email and offering your perspective and ideas.

In response to your question, I have outlined some ongoing and planned work that the City is working on to build a city that provides housing for all.

Additional Dwelling Units – Planning staff have recently amended our existing Zoning By-law (in advance of the new Zoning By-law to expedite the change) to permit additional dwelling units both attached (duplex) and detached (backyard home) in all low density residential zones. We hope that this will be a gentle form of density in our established neighbourhood with new units.
www.kitchener.ca/backyardhomes

Housing Strategy – Kitchener has recently approved a Housing Strategy which will guide further work and identifies immediate needs of our community.
www.kitchener.ca/housing

Affordable Housing Incentives - Kitchener has approved two financial incentives for affordable housing providers to help reduce financial barriers of bringing affordable housing to market.
Affordable housing incentives - City of Kitchener

Downtown Zoning and Neighbourhood Planning Reviews – We are updating land use permissions for our Downtown and central neighbourhoods that have great access to public transit (LRT) by permitting additional density, increased building heights, and reduced parking standards to increase the potential housing supply in the core of the City. Growth is expected and planned to continue with various forms of housing development – high rise, medium rise, and some low density redevelopment that is compatible with the existing community. Increasing housing supply, in various forms, in strategic locations (like Downtown and central neighbourhoods) with access to transit means that residents can find a housing solution that doesn't require the expense of vehicle ownership.
www.kitchener.ca/npr

Inclusionary Zoning (IZ) – Kitchener is working to develop IZ that can require that new developments have a portion of units that are affordable. Planning staff have launched that project and we hope to amend our Zoning By-law in the next few years to include IZ. As of now, IZ can be applied within Major Transit Station Areas (roughly all lands within a 10 minute walk to an LRT station) and Council has passed a motion requesting the Province permit IZ in all zones.
https://www.kitchenertoday.com/local-news/kitchener-city-council-passes-a-motion-regarding-inclusionary-zoning-2770472

Make it Kitchener 2.0 – Kitchener has recently approved and one of the pillars of the program is to leverage City assets like land to raise funds or form partnership for mixed-income, mixed use communities through new investment models that enable the City to actively create affordable and attainable housing.
https://www.makeitkitchener.ca/make-it-kitchener-2.0-page/make-it-kitchener-2.0-update-file

Kitchener has also made land available for the temporary accommodation of A Better Tent City, which supports critical housing for vulnerable residents of our community.

Housing for all is a complex issue that requires many solutions. A City for everyone is a priority for us and is something we will never lose sight of.

Thanks,

Garett

Subject: [EXTERNAL] Concerns RE: Affordable Housing in Kitchener

Good morning Mr. Stevenson,

My address is B-354 Activa Ave., Kitchener, N2E 4B8.

I'm writing today to express my fear of what the future holds for our children when they are unable to afford housing, and to urge you to take decisive and immediate action to increase the development of affordable high-density housing anywhere and everywhere we can fit it.

I am particularly interested in making my opposition to the agenda of the group friendsofbelmontvillage.com known. The goals of this group lack the empathy or foresight to recognize the inevitable end result of the policy decisions they are promoting. If we don't rapidly increase residential development in Waterloo region, and across Canada, these misguided and over-privileged activists will have a much worse problem on their hands when their streets are littered with vans and tents, not to mention the plight of those who are currently threatened with either homelessness or lifelong serfdom to landlords that turn around and convert their hard-earned money into equity that the renters will never see a penny of. I'm not just talking about people who are unemployed or underemployed. We are talking about earners in the top 10% who will never be able to own a home.

Frankly, the state of our housing economy is disgusting and any politician who is not making serious efforts to make housing available to **all** Canadians is utterly failing their constituents and needs to go.

Specifically, I would like to see the following actions taken to combat this crisis, some of which must be tackled at the municipal level:

- Relaxed zoning/permitting regulations to allow more high-density residential development. Housing should be a top priority, and approving permits for construction should have a quick turnaround if we have any hope of catching up with housing demand.

- Allow "Missing Middle" housing on all residential parcels to fill a housing niche that is currently largely absent in many areas.
- Government subsidies to provide affordable housing to all Canadians – lets see how quickly politicians will start taking this seriously when our tax dollars are footing the bill. These subsidies must go well beyond down-payment assistance programs that exist, as most Canadians simply don't have the cash flow to be able to afford today's housing costs.
- Implement steep vacancy taxes on residential properties to make a larger percentage of existing housing available to the Canadians who need it.
- Legal limits/heavy taxes on secondary+ home ownership. Hoarding of residential property should not be a viable investment strategy.

Can you share with me some of your priorities in dealing with the housing crisis we are facing?

Thanks for your time,

Garett Stevenson

Thank you Margaret.

Let me just add 2c to great email.

This region has a housing affordability crisis, and affordable housing should not just be a component of future proposed projects, *it should be the predominant goal of housing projects approved going forward.* The city's planning decisions need a sharp turn away from gentrified condo developments. This to me is perhaps the single biggest reason that more unobtanium condo projects seem preposterous.

I do intend this message with the most respect.

Subject: [EXTERNAL] Belmont Village - 660 Belmont Proposal

Hello Garrett Stevenson, Margaret Jonston and Mayor Vrbanovic,

I write to you today with concerns about the proposed building at 660 Belmont.

The proposed height of 49 metres is almost double the 25 metre maximum **stipulated in the Zoning By-Law** applicable to this site. Currently, there are no buildings in Belmont Village more than 8 metres in height.

I'm not sure why this is even up for discussion - the maximum height of buildings in this area is already provided in a by-law. A municipal bylaw is no different than any other law of the land, and can be enforced with penalties, challenged in court and must comply with higher levels of law.

The people in the neighborhood have made their thoughts and feelings on this proposal very clear - none of us want a building *that high* in the area. There is no real need for it.

We have also not heard whether any of the residential spaces built will become low-income, affordable housing, and **would appreciate if this were addressed promptly.**

We do not want to set a precedent for other developers.

We do not want the Iron Horse Trail and Gildner Green to be covered in shadows for more hours of the day. The trail is well-used and the park is loved by all of the neighborhood children.

We do not want a reduction in trees or green spaces in the area.

We do not want the developer to rely on street parking.

Please consider our voices and do not allow this building to be taller than the 25 metre maximum which is, again, stipulated in existing zoning by-laws.

Thank you,

100 Gildner Street

Subject: [EXTERNAL] RE: 660 Belmont, Request for Clarification

Thanks very much Garett, this information and detail is useful. Of particular importance, in my opinion, is the clause *"the City's Official Plan defies compatibility as land uses and building forms that are mutually tolerant and capable of existing together in harmony within an area without causing unacceptable adverse effects, adverse environmental impacts or adverse impacts. Compatibility or compatible should not be narrowly interpreted to mean "the same as" or even as "being similar to".*

I recognize that the "compatibility consideration" is not straightforward - part qualitative (eg, *existing together in harmony*) and part quantitative (eg, *unacceptable adverse impacts*). I know that you have to consult the public on proposed OP/Zoning amendments, but am not sure that the process can significantly influence Staff's recommendation. For example, the Developer's consultants have prepared various reports that conclude that major adverse (environmental) impacts (ie, traffic, shadows) would be acceptable, and it appeared to me that City staff agreed with/represented those conclusions during last week's public meeting. I also pretty sure that any residual or "minor" impacts identified during the consultation can be designed out by the Developer in subsequent proposals while more-or-less retaining the building height and mass. So this leaves the qualitative bit, the *"existing together in harmony"* provision. Residents have voiced their opposition to the proposed zoning change using various takes on the "harmony" criteria, but received, in my opinion, technocratic/muddled responses from the City. Since last week's meeting, residents who - in good faith – oppose the proposed amendments, have been accused quite publicly of NIMBYism or worse by other city dwellers. To be clear, I personally support the current zoning for 660 Belmont and do not support the proposed OP/zoning amendments. I will watch the process unfold with interest.

Thanks again and best regards, Kevin

To:
Subject: RE: 660 Belmont, Request for Clarification

Hello,

I am assisting Juliane with responding to the email questions received to date.

Currently, the Official Plan permits a maximum building height of 8 storeys (and 25 metres) on lands designated Mixed Use as an Urban Corridor. However, increases in building height, up to 50%, are permitted for mixed-use buildings without an Official Plan Amendment (in this case, 12 storeys and 37.5 metres). The Official Plan Amendment requests to increase the maximum building height to 13 storeys and a height of 49 metres. The current zoning is MIX-2: Mixed Use Two which permits a maximum height of 25 metres and 8 storeys. The Zoning By-law Amendment Application also requests to increase the maximum height to 13 Storeys (49 metres).

If the building was revised to 12 storeys and stayed at 49 metres, an Official Plan Amendment would be required – the maximum height in metres and storeys cannot be exceeded.

15.D.4.22. Generally no building will exceed:

a) 10 storeys or 32 metres in height, whichever is greater, at the designated Mixed Use identified as a City Node, or Communi

b) 8 storeys or 25 metres in height, whichever is greater at elevation, on lands designated Mixed Use as a Urban Corridc

c) 4 storeys or 14 metres in height. whichever is greater, at elevation on lands designated Mixed Use identified as a Nei on Map 2.

15.D.4.23. Notwithstanding Policy 15.D.4.22, the *City* may consider increase building height of up to 50 percent of the permitted buildinç *development* or *redevelopment* provides a *mixed use* building cor units. It must be demonstrated that a *pedestrian* scale base, ap along the streetscape and *compatibility* with adjacent lands is achie applicable policies within this Plan are satisfied.

When considering the appropriateness of amendment such as increase in building height, we must consider compatibility.

The City's Official Plan defies compatibility as *land uses and building forms that are mutually tolerant and capable of existing together in harmony within an area without causing unacceptable adverse effects, adverse environmental impacts or adverse impacts. Compatibility or compatible should not be narrowly interpreted to mean "the same as" or even as "being similar to".*

Adverse impacts may include but will not be limited to: shadows over private amenity areas or on building façades for an unacceptable duration, issues of privacy, overlook conditions, negative microclimatic impacts, light pollution (such as light trespass or glare), odour, vibration, noise pollution urban heat island effects, visual clutter or obstruction of views and/or vistas.

Adverse Effects, as defined in the Environmental Protection Act, means one or more of: a) impairment of the quality of the natural environment for any use that can be made of it; b) injury or damage to property or plant or animal life; c) harm or material discomfort to any person; d) an adverse effect on the health of any person; e) impairment of the safety of any person; f) rendering any property or plant or animal life unfit for human use; g) loss of enjoyment of normal use of property; and, h) interference with normal conduct of business.

Adverse Environmental Impacts are changes likely to arise directly or indirectly from development, redevelopment or site alteration within or lands adjacent to a Natural Heritage System feature that result in widespread, long-term, or irreversible degradation of the significant features or impairment of the natural functions of the designated area.

The City requires studies and plans to demonstrate impacts of a development and compares those results against acceptable standards in the City's Official Plan, Zoning By-law, and Urban Design Manual. The Official

Plan and the Zoning By-law both regulate maximum building height by storeys and metres. That is intentional because as you note, not all storey heights are the same. It is possible that a revised building could feature the same number of storeys, but have an overall lower height. The studies, such a shadow study, are based on the building mass as designed (total size) and not on the number of storeys.

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont, Request for Clarification

Dear Juliane-

Congratulations on the 660 Belmont public meeting last night. Although I wished we would have had more time to focus on specific issues (ie, height), I understand that it is difficult to satisfy everyone in this forum.

I have a specific questions for you based on comments I heard from the City and Developer last night. This is my understanding/questions:

1. The OP designates the subject lands as Mixed Use, Urban Corridor and states that "*generally no building will exceed 8 storeys or 25 metres in height, whichever is greater*" for these lands;
2. The OP further states that, notwithstanding the above, "*the City may consider increases to the permitted building height of up to 50 percent … where a development or redevelopment provides a mixed use building containing residential units*". If the City invoked this clause, it would take the proposal to 12 storeys or 36m, whichever is greater.
3. The current proposal is for 13 storeys at 49m which exceeds both 1 & 2;
4. So here are the questions:
   - What specifically does City staff consider in deciding whether to recommend to Council if #2 above be invoked? I assume there is a planning assessment, but what roles does/can the community play in this assessment? For example, would you consider administering a survey to residents/businesses within a certain radius asking them simply and directly if the agree with the proposed OP amendment/zoning change?
   - If the "notwithstanding clause" is invoked, then the building is limited to 12 storeys or 36 metres, "whichever is greater". So, hypothetically, the Developer could come back with a revised proposal at 12 stories and 49m. Who decides on limits to story height? Discussion last night leads me to believe that application of the City's Design for Tall Buildings guideline would support a 12 story / ±49m structure? What specifically does the guideline say about story height? Surely there must be a limit to story height or the "whichever is greater" clause allows for significant gaming.

Thanks very much for your help Juliane. To be honest, height is the core issue as it not only drives the "village character" debate, but also directly impacts traffic, shadows etc. The community seems very open to an 8 story, 25m development, but not so much to a 49m development. It is not clear to me how we can impact the City's decision making process at this point, including participating in the small group meetings.

Best regards,

Subject: [EXTERNAL] Re: Session 2 Ending

Hello Garett

Thanks for holding this session. I had to leave early due to another commitment.

It seems to me that the developer knew the zoning when the property was purchased. Presumably a profit could be made keeping to the current zoning. Sticking with the current zoning will not harm the developer.

Many are OK with the development taking place with the current zoning. The objections, which I agree with, are to going beyond the current zoning, especially with respect to building height and parking. The current zoning recognizes the location and the surrounding residential area. This is a landmark case; if the zoning is changed it will be changed for any development in Belmont Village.

There are plenty of properties south of Glasgow which could be easily developed for high rise housing. That is where it should take place.

Subject: [EXTERNAL] 660 Belmont development variances

Dear Mr. Stevenson

I have become aware of the proposed development at 660 Belmont and the various changes requested by the developer.

I understand the current maximum height for a building on that site is 8 stories. If development is to take place there, the 8 story limitation is appropriate for a small shopping area in the midst of a residential area. The requested 13 stories would overwhelm the surrounding area and cast considerable shadows.

There are other undesirable implications of a 13 story building on this site.

-I understand approval is sought for a reduced parking requirement. This will force parking on to Belmont Street, the Rexall drug store parking lot, and residential areas, causing considerable inconvenience for current customers of Belmont village businesses and area residents. Currently, Belmont village parking is heavily used. No further demand for public parking should be introduced into the area.

-I understand all trees on the site will be removed and no other planting or green space is planned. One of the joys of the Iron Horse trail is the trees beside the trail, not to mention the CO_2 capture. Nome of this should be lost.

-An 8 story building will cast a considerable shadow; a 13 story building will cast too much of a shadow, not something we want in a residential area.

There is also the issue of precedent. Once one 13 story building is up others will follow. Now is the time to limit the height of development on Belmont. I like the Belmont Village as it is but, allowing for the intensification of development, an 8 story limit is appropriate and should be enforced. The Belmont Village area is not the place for high rise buildings.

Development of this area must be responsible and conform to the current by-laws and zoning. The current by-laws and zoning allow the appropriate scale of development for this area. There are no valid reasons to allow variances at this location.

The developers were well aware of the zoning and by-law requirements associated with this site when they purchased the site. Purchasing the site suggests development of the site under these requirements was worthwhile. They should proceed under the current zoning and by-law requirements.

I oppose any change in by-law requirements or zoning for this development.

Thank you

670 Avondale, Kitchener, N2M 2W3

I strongly object to this development. The size seems egregious and purely profit driven development that will little to nothing to alleviate the housing crisis. Not to mention the increase congestion and the demise of a established local neighborhood shopping and dining experience. This does one thing and one thing only, increase the luxury apartment market. Having managed to hang on in the pandemic any shops now still operating will have to deal with the fall out of this development and once more properties fall vacant the developer will scoop those too, and then you have another tower block enclave!

Dear Margaret Johnston,
I write to you in your capacity as councillor for Ward 8. As residents of the area we are very concerned about the proposed development at 660 Belmont. The primary concerns are outlined in the attached file. We are sending this as an attachment because it contains images that won't reproduce in the email body.
Thank you for your attention to our concerns.
We are happy to receive a response at this email address.

135 Union Blvd
Kitchener

Concerns about the proposed development at 660 Belmont ave.

- A first concern about the 660 Belmont proposal is the unsoundness of the argument that was used to justify an increase of its height from 8 (the allowed maximum by the zoning bylaw) to 13 floors. The developer stated that the 13-storey project would provide similar floor space as a full coverage of the site by an 8-floor structure. Therefore, in their view, as the building would not cover the entire site, the developer should be permitted to add more floors as a compensation. The zoning bylaw does not give a right to full site coverage at the maximum permitted height, which, when not achieved can be transferred into more floors than the allowed limit. It is well known and accepted that in all circumstances, there are constraints that prevent full lot coverage. The argument that was used to justify the increased height is simply invalid.

- While the site for the 660 Belmont could accommodate a building that is 13 floors with minimal impact on surrounding residential areas because of distance from these areas, it breaches the planning vision for the Belmont Avenue corridor and will create a dangerous precedent. When the City of Kitchener adopted the 8-floor zoning for the Belmont Avenue corridor between Glasgow and close to Union Boulevard, there were reasons for not adopting a higher floor limit. The concept adopted by the City was meant to create a mid-rise urban boulevard on this section of Belmont. Why would the first new building to be erected in this part of Belmont be allowed to deviate from this concept and thereby scuttle the vision of Kitchener planners for this area? All of this raises the question of what the alternative redevelopment model for this area will be: in all likelihood, a succession of high-rise towers. This will probably be the outcome since, if approved, the 660 Belmont will represent a precedent, to which subsequent developments will refer when requesting heights exceeding present limits. Precedents have considerable influence in planning tribunal decisions. This was the case with OMB decisions and LPAT decisions seem to be going in this same direction.

- If the site of 660 Belmont could potentially accommodate higher heights without serious effects on close-by residential areas, this is not the case for much of the remainder of the Belmont Avenue corridor. In its present form, this corridor provides a delicate and generally successful accommodation between low-rise commercial uses and stable residential areas. The introduction of 8-storey buildings, if they are inserted with care involving, for example, setbacks, could present a higher-density version of this accommodation. It would also demonstrate that intensification can happen successfully. But the impact of 13-storey towers would be different, making it impossible to introduce new structures while respecting existing residential areas. The pictures of the 6-storey building on at 188 King Street South below shows that when a building is not too high, it can coexist in a minimally intrusive fashion with surrounding neighbourhoods.

View of the 6-storey 188 King Street South building in Waterloo.

Relation between the 6-storey building and nearby houses. Note the use of the laneway as a separator and the fact that if the building were more than twice its present height the relation between the two types of buildings would be very different.

Subject: [EXTERNAL] 660 Belmont

Dear Mr. Stevenson,

I am writing to express my opposition to the proposed development at 660 Belmont Ave West. While I agree that higher density is needed, especially in terms of apartments or condos geared towards families (ie more than two bedrooms), the height of this proposed building is a problem. It would be radically out of place in the neighbourhood and its sheer scale would disrupt the unique character of the area. High, multistorey buildings are, as Jane Jacobs pointed out long ago, not amenable to fostering communities. It would be far more productive to build something smaller, in accordance with existing city by-laws and also to incorporate mixed use and larger units for families. Indeed, I'd rather see some of the other low rise buildings around the Belmont area be replaced by condo developments in the 25 metre range, again with mixed use (retail, restaurants, fitness), and geared towards families. This would be far better than the monolithic structure that the developers wants to erect, which will have a negative impact on parking, traffic, green space, light and setbacks. There is an opportunity to create a truly liveable space and community, instead of yet another lifeless skyscraper. I urge you to be bold and make the right choice.

Respectfully,

(181 Union Blvd., Kitchener, ON)

November 16, 2021

Dear Mayor Vrbanovic and city councillors,

My name is [redacted] and as the Co-Owner and Operator of Arabella Park Beer Bar, I am writing to express my support for the redevelopment proposal of 660 Belmont Avenue West.

The proposed mixed-use development at 660 Belmont Ave. W. indicates a necessary shift for our community, as I believe it would bring increased revenue to small businesses who have faced extreme hardships during the pandemic with lockdowns and provincial capacity restrictions. Furthermore, this development would be key to making the community more vibrant with people. While Belmont Village has its charm, it is lacking in vibrancy. It could benefit from the hustle and bustle that comes with more foot traffic in the area.

As a Millennial with an above average income, trying to buy my first home in Kitchener was beyond difficult. The lack of supply is driving up housing prices and forcing people to look outside of the city for a place to live. This diverts property tax base elsewhere, when in fact it should be collected by the city to then be reinvested into infrastructure and public services. Had there been a greater diversity of housing - like a condo in a sleek, modern mixed-use building with amenities close to transit and local businesses, I wouldn't have faced the house-buying challenges that I did. As our community continues to grow, I trust this development and future mid-high rise developments will provide others with the opportunities I wish I had, encouraging the creation of complete communities, with more green space and public amenities likely to follow. This will make Belmont Village an even more desirable destination, which benefits existing and prospective area residents alike.

Your support would have a significant impact on the future of our community as Kitchener continues to grow.

Thank you.

Yours sincerely,

Co-Owner / Operator
Arabella Park Beer Bar

Garett Stevenson

Subject: [EXTERNAL] 660 Belmont

Dear Garett Stevenson,
I live near Belmont St. and shop there regularly. The proposal to erect a highrise that is twice the size of the bylaw recommended height is something I strongly oppose. This will alter the character of the street dramatically, and cast a long shadow over everyone who lives nearby. I add my voice to the community members who object. Please do not let this mar our beloved Belmont village!

Subject: [EXTERNAL] Support for 660 Belmont Ave

Good afternoon all,

I live in the area surrounding Belmont Village on Gildner Street. We moved from a 100 acre property into the city to be a part of the progress. We were inconvenienced (in a good way) by the LRT construction and until Covid had been using it regularly.

I can't imagine the ratio of negative comments you receive compared to positive comments on a project such as 660 Belmont Ave W. This is a formal statement in support of the development. Although quaint, Belmont Village is tired, for most of the day and many evenings is a ghost town and if it wants to be relevant in the future I believe we should embrace projects like this to make it thrive. I'm in the village every day often a few times a day.

I continue to receive mailers saying it's not a done deal... I find it fascinating that most of the people opposed are much older than I am, have lived nearby the proposed project for years and are trying to control what the future holds for us and a younger demographic by protecting what they have. They don't represent the future and I refuse to let them put words in my mouth.

In my opinion Belmont and area is one of the most desirable parts of the city. With walking access Downtown, Midtown and Uptown, trails for cycling and a real neighbourhood feel, I wish more people could experience this.

Belmont village is a tired group of single level businesses that need people to thrive. I like to imagine how these businesses would flourish if there was a larger local population. We would be both a destination for those from outside of town and we would become even more desirable for locals and those that wish to be locals. I would like to see more development like 660 Belmont to really create a special place.

I've heard of very few businesses that oppose the project. I've heard no opposition from a younger demographic including all of my younger neighbours and their families. All opposition seems to come from people over 70 (not a scientific stat).

Kitchener and Belmont Village need to continue to adapt and embrace change to add to the many positive attributes of our rapidly growing city. Give the people they want not protect the older population by what they have.

I'm available to discuss, but want to make it clear my hope is 660 Belmont Ave W is just the beginning of an intensification project and 10 years from now makes the village familiar but completely relevant and updated for the future.

--
Thanks

Garett Stevenson

Subject: [EXTERNAL] 660 Belmont Avenue West

Dear Mr. Stevenson,

Re 660 Belmont Avenue West

I am writing to you to express my concerns and opposition to the proposed development at 660 Belmont Avenue West, Kitchener.

I have lived in the Belmont Avenue neighbourhood for over 45 years. During that time I have seen retail businesses, supermarkets, banks, doctors' offices and others come and go. However, the changes have been incremental, and the intimate, personal scale of the plaza has been maintained. In this respect, it is unique, there is no other like it in Kitchener. People are attracted to it for exactly this reason. In my view the proposed development will result in cataclysmic change that will create irreversible damage to the plaza's distinctive character. This would be a loss not only to the surrounding neighbourhoods but also the entire City of Kitchener (and indeed, the City of Waterloo, which has no say in the matter)

I am sure that you are already aware of the concerns relating to this development so I will reiterate briefly only those that are of specific interest to me.

1. The proposed development is completely out of scale with the surrounding neighbourhoods developed at the same time as the plaza, i.e., the 1930s to the 1950s.
2. The sale of publicly owned land as part of the development process rather than being considered separately. This suggests a lack of impartiality on the City of Kitchener's part.
3. The increased traffic and parking pressure on the adjacent residential areas that are already stressed in this regard.
4. The lack of any affordable housing component.

I would be grateful if you would acknowledge receipt of my communication.

Yours sincerely,

Garett Stevenson

Subject: [EXTERNAL] Sale of City lands and Belmont Plaza

Dear Mr. Stevenson,

Re: Sale of a portion of Belmont Lane East from the south entrance off of Belmont Ave (north side of Tim Hortons) to Claremont Ave.

I am writing to express my opposition to the sale of the above public land to the Zehr Group.

The Urban Design Manual, published by the City of Kitchener (2012) clearly states that "Belmont Lanes (East and West) be maintained as public property." This is essential because Belmont Lane East and Belmont Lane West are currently used extensively by citizens and are essential to the functioning of the businesses. Allowing one section of laneway to become private sets a precedent for the rest of Belmont Lane, East & West.

I also feel that any discussions of the sale of these city lands should be made in public and not behind closed doors without involvement of the citizens of Kitchener.

I would be grateful if you would acknowledge receipt of my communication.

Thank you,

Garett Stevenson

Subject: [EXTERNAL] 660 Belmont Redevelopment

Good morning Margaret and Joanne.

I live in the Belmont Village neighbourhood, at 86 Earl St and have been circulated with information on this development from a local neighbourhood group called "Friends of Belmont Village".

From this, I understand the proposed development requires an OPA and ZBA in order to proceed in its current form, a 13 storey mixed use bldg (commercial ground floor, residential above).

Although I am not opposed to the redevelopment of this site in general, I do wonder about the scale of the proposed development, and its appropriateness in this particular location, given the scale of neighbouring existing buildings.

I trust this (ie project size and scale) is among the things being considered by City staff as they review the application, but wished to make my thoughts known.

I understand there is a mtg tonight, and that I may have missed the deadline to RSVP...but if there is any way I can get on the invite list, I would certainly appreciate it, if only to hear the discussion, and ideally see more details of the proposed development... in particular any renderings that the developer's team might have done (there was a very simple rendering attached to the package that I got, but suspect there may be more available).

As a side note, I also understand there was a mtg back in December which I was not aware of at the time - I presume because my address did not quite get me onto the mailing list. Pls do add me to the project mailing list if there is one - I would like to stay current with plans for this site.

Thank you!

Garett Stevenson

Hi Garett: Just wanted to drop a quick note of support to continue your efforts to resist the NIMBY movement. The Belmont project is the latest example of some people's lack of understanding that we have to forge ahead and create more density in those neighbourhoods that are close to the LRT. As someone who lives in Westmount, I now recognize that we need to share our wonderful neighbourhood.

Also, as someone with children who have given up the dream of buying a single family home, I hope that more townhouses, semi duplexes and two and three bedroom apartments are in the city's future.

LETTERS TO THE EDITOR | OPINION

Condo tower will erode the character of Belmont Village

Tue., Dec. 29, 2020 | 1 min. read

Developer proposes 13-storey condo tower — Dec. 24

One of the appealing charms of Belmont Village has been — and still is, but to a decreasing extent — its diverse mix of residential units, shops, and services.

What's being proposed and will undoubtedly be approved will further erode the very character and value of the village that the Zehr Group want to uphold. The village does not need a 13-storey tower dominating its major corner, even with the promise of more restaurants (how many more of these does the city need?) and cool retail spaces for gathering and lingering.

The Zehr Group might note that several useful elements of the village — which I'll define as basic services within walking distance and accessible by just about anybody — either have disappeared or will soon be going. Among them: a bank, a doctor's office, and the Dettmer auto repair shop. And the mainstream grocery store that the Zehr Group fondly recalls pulled up stakes many years ago.

This is what passes for progress in Waterloo Region, another move toward tedious homogeneity in the guise of enhancing a community's street scene.

Attachments: Proposed Redevelopment of 660 Belmont Ave Kitchener

Dear Debbie and Marg (and Berry, Juliane, and Garett copied in as well),

Thank you both very much for your excellent work on our City Council representing Wards 8 & 9. This is the first time I am writing to you because, frankly, I've had very little to add to your already excellent efforts - though in retrospect, a note to simply say thank you is well overdue.

I am writing today in regards to the proposed redevelopment of **660 Belmont Ave.** in Belmont Village. I know the site has been under considerable scrutiny with some rather heated discussion.

While my wife, Kim, and I plan to attend one of the community engagement sessions that Garett has organized, I found it helpful to organize my thoughts on the matter in writing. As such, I am attaching a letter that I hope will provide some helpful context and my thoughts on the matter - much of which is echoed by many of the neighbours I have spoken to.

I hope it's helpful in your work to guide this and future development in the area. Thanks so much for your time and if you'd like to discuss anything here please do not hesitate to contact me. I'd welcome the opportunity to hear your thoughts.

Warmest regards,

March 9, 2021

Re:
Proposed redevelopment of 660 Belmont Ave. Kitchener

Summary

- Kitchener is in a housing crisis and urgently needs more supply.
- Affordability is paramount for our community. The proposal for only 1-2 bedrooms with no plan for affordability is unacceptable. There must be meaningful pressure to build what's needed.
- Recommendations:
  - Approve the height on condition of affordable, family units
  - Approve the purchase of Belmont Lane on condition of community space and public gateway access between Belmont Village and the Iron Horse Trail
  - Create a Belmont Village Vision Committee to set the community vision
  - Create a Belmont Village Community or Secondary Plan to guide development
- Opposition to the project is misguided, not rooted of needs in the community, nor reflective of the welcoming place we aspire to be.

Context

We are in a housing crisis. Recent analysis shows that:

- Ontario has grown by approximately one million people in the last 5 years, with almost 63,000 of those people choosing Waterloo Region as their home[1].
- At an 11.8% rate of growth between 2015-2020, Waterloo Region is the fastest growing community in the Golden Horseshoe[2], and the third fastest growing community in all of Canada between 2019-2020 alone[3].
- Out-migration from the City of Toronto in that same timeframe has been ***primarily young families***, meaning the new citizens Waterloo is gaining are people looking for space to grow[4].
- The Region is expected to grow by 360,000 (or roughly 55%) by 2051[5].

Yet in that time, we have failed to develop enough appropriate housing to meet the needs. This has led to our current circumstances:

- A critical shortage in housing supply that has driven the average price of a family home in Kitchener-Waterloo to more than $900,000[6].
- An overbuilt supply of 1 and 2 bedroom condominium units that has seen lower demand and prices drop by 1.4%[7].
- A local housing market that is not producing apartments and condos that can actually accommodate "families, people looking to downsize and appeal to modern urban ideals"[8].

The community needs affordable family housing, and we need a lot of it. Now.

Skyrocketing home prices that push people out of the community are a greater threat to the character of Belmont Village than a few extra stories on a building.

There are a number of things I would like to see happen regarding 660 Belmont Ave. and Belmont Village more broadly.

1. **Regarding 660 Belmont Ave.**
    - The height should not be an issue here. There are already numerous buildings within a few hundred meters that exceed the proposed height for 660 Belmont Ave. There are no houses within 100 meters in any direction, and the site is at a major intersection. *If density doesn't belong here, where does it belong?*
    - That said, if we are to permit the excess height, that allowance should go towards improving the community. The City should insist these added units include affordable units for families to meet the needs of the community and mitigate further gentrification.
    - ***We do not need significantly more 1 and 2 bedroom units that benefit investors and speculators, but fail to benefit the community.***
    - Regarding parking: We need to stop fostering car culture in Kitchener. Focus instead on ensuring that:
        - Belmont Village has needed amenities, like child care, grocery stores, etc.
        - Connections to Belmont Village are safe and highly accessible by walking, biking and transit.

2. **Regarding the purchase of Belmont Lane**
    - This is not a functional roadway and there is little benefit to the City retaining it as such.

- That said, if we allow this purchase, it should benefit the community by creating a community space off the Iron Horse Trail and a *public* pedestrian path affording gateway access to Belmont Village.

3. **Create a Belmont Village Vision Committee.**
   - Similar to the City of Kitchener's Downtown Action and Advisory Committee or the City of Waterloo's Uptown Vision Committee, a Belmont Village Vision Committee would advise council and staff on matters pertaining to enhancement of the economic, social, cultural, environmental, physical, and educational circumstances of Belmont Village.
   - This will allow the City to balance and bring together the overall regional aspirations for growth and density, with a community-led vision for how Belmont Village can uniquely contribute to that bigger picture. All while retaining a coherent identity and avoiding the traps of protectionist or NIMBY-ist thinking.

4. **Develop a Community or Secondary Plan for Belmont Village.**
   - It's well-known that other parts of Belmont Village are being considered for redevelopment. Rather than an ad hoc approach to development, let's create a plan that sets expectations, addresses community needs, and gives clear direction on how to develop successful projects.
   - There are already Community Plans in the City for identified growth areas: https://app2.kitchener.ca/appdocs/communityplans/
   - An example of an infill plan process we can reference is the Downtown Hamilton Secondary Plan: https://www.hamilton.ca/city-planning/planning-community/downtown-hamilton

I confess to great disappointment in the objections to this development, which seem less concerned with how to improve our community, focusing instead on preserving the worsening unaffordable exclusivity of the neighbourhood.

Belmont Village should be a place for everyone, not just the wealthiest of our citizens.

We have an opportunity to do better. To make a commitment to building a community that is equitable, diverse, inclusive, and sustainable. One that makes space for people and works hard to meet their needs. One that is focused on ensuring people have a safe home; and access to childcare, good jobs, food, and a healthy, livable community.

I believe we can have all those things if we try. I believe it will be to the advantage of all, current residents, new residents, developers, and the City as a whole if we achieve these things. I hope we'll choose to do the right thing.

About me

I have lived in Waterloo Region off and on for over 20 years, having first attended Wilfrid Laurier University, and returning as a resident in 2008. My wife and I bought our first home on Mt. Hope St. in 2010 and moved to Gildner St. in 2019. We've raised three boys here and have been active participants in the community for a long time, helping to organize community Harvest Festivals, neighbourhood gatherings, and school events for many years.

I've volunteered with the Kitchener-Waterloo Community Foundation, Women's Crisis Services, Junior Achievement, and I chair the Economic Development Advisory Committee for the City of Waterloo. I am currently pursuing a Masters Degree in Economic Development at the University of Waterloo, where I also work full time as the Manager of the David Johnston Research + Technology Park. I've studied and worked on matters of land-use planning, community development, and economic development for some time.

Subject: [EXTERNAL] Re: 660 Belmont Avenue West - Comprehensive Engagement Report

Thanks for sharing this Garett! Much appreciated. And thank you all for all the time you and your team have taken to listen to and compile all this feedback. I'm learning so much from this process, not only as a resident, but also as a grad student in Ec Dev at UW and manager of the Research Park, where I am about to undertake my own community consultations. So I do appreciate the extensive time and energy you've already expended.

I confess I am incredibly saddened to see no interest from the developer to create more attainable or affordable housing, especially for families. I am equally disappointed to see so little concern from current residents of the area - most of whom won't be the people living here in 25 years - for making Belmont Village an affordable place for families that's centred on inclusivity, diversity, and sustainability. What can we do about this?

I am highly supportive of growth and density, especially at a busy intersection like Belmont and Glasgow that has little existent "character" (gas station, abandoned garage, tim hortons?). If density can't happen there where can it really? But I can in no way get behind any project so clearly designed to keep Belmont Village exclusive and, let's face it, white. The same can be said of the opposition who seem more concerned about their property values and personal want than with what's needed and best for the whole community. Both the developer and the opponents seem intent on keeping many people out of Belmont Village - they just have different ways of achieving that end. We're a changing and increasingly diverse community and we need to reflect that in our planning.

I hope the City will do what's right for the community overall. We need diversity of housing, places for families, and development that fosters strong, diverse community networks. This plan isn't it and if the developer can't get behind that vision for the City and find creative solutions to make it work, then they should move on. We're not getting any more land to develop, but there's plenty of other developers we can work with. Let's get it right so the next generation isn't stuck with our poor decisions.

Thanks for listening and I look forward to seeing what comes next!

Subject: [EXTERNAL] Re: 660 Belmont Avenue West - Small Group Meetings

Dear Garett,

Thank you for the invitation to join one of the small group sessions. Following the online meeting of February 25, I decided **not** to participate in the small group sessions. Why? I quickly realized that 660 Belmont Ave development will go ahead, particularly given the repeated emphasis that the development does not need an Official Plan Amendment. Fait accompli, in my view. Also, I was disappointed in the defensive tone of the city planners and their terse responses to valid questions previously raised in the first meeting. Moreover, I find it difficult to accept the traffic assessment, since Belmont Avenue has fairly recently been reduced to one lane traffic in either direction, and parking is already difficult, with parked cars extending up to Avondale and Claremont (Rock and Earl) during busy periods. This creates safety issues for cars, pedestrians and cyclists.

Also I was disappointed with the architect's tone and attitude. He seems unaware that the street name is Belmont Avenue (not Street). And his views on the current Belmont architecture were unnecessary and self-serving. He also seemed to be unaware that Belmont Village is already a thriving community, attracting a diverse group of people. This vitality leads to the current parking issues. If he is so convinced that the commercial space of 660 Belmont (and the mews) will attract throngs, why then is there no request for commercial parking space?

Finally, I have some concerns about the role of Green Space in the Belmont Avenue West Corridor (perhaps all the mixed corridors). Hopefully the Catalyst Development s not a precedent, with its large paved parking lot (a potential flood hazard). Prior to this development, there was a small stream abutting the Iron Horse Trial, with marine life and vegetation. My son and I spent many hours looking at the tadpoles, frogs, bulrushes, etc. Something irreplaceable was lost.

I trust you will receive valuable feedback at the small group sessions and I hope this feedback has some impact.

Best,

Hello,

As mentioned during the Neighbourhood Information Meeting last Thursday, I am going to be facilitating small group discussions regarding the development applications for 660 Belmont Avenue West.

We acknowledge that the large scale digital meetings clearly have had some unintended consequences that we want to opportunity to address. While large scale meetings like the two already held in December and last week are efficient in sharing information, we know they need to be supplemented with opportunities for two way dialogue between City staff and yourselves.

I am reaching out today to invite you to RSVP for one of the small group sessions. I kindly ask that you identify your top 3 preferred timeslots. These meetings will have a maximum attendance of 15 people each to ensure that everyone will have an opportunity to speak and share their perspectives and ask questions. Additional meetings may be scheduled to accommodate everyone's availability if the 10 scheduled sessions below fill up, or if you cannot attend at these times.

To register, I kindly ask that you respond to me by email with the following information:

1. **Please select up to three sessions that you are available to attend.**

Session	Date	Time
Session 1	March 16	1:00pm - 2:00pm
Session 2	March 16	2:30pm - 3:30pm
Session 3	March 16	6:30pm - 7:30pm
Session 4	March 17	9:30am - 10:30am
Session 5	March 17	12:00pm - 1:00pm
Session 6	March 18	12:30pm - 1:30pm
Session 7	March 18	2:00pm - 3:00pm
Session 8	March 18	6:30pm - 7:30pm
Session 9	March 19	8:00am - 9:00am
Session 10	March 19	3:30pm – 4:30pm

2. Please identify the main topics you would like to discuss during the meeting.

3. Please confirm how many people will be attending with you.

I commit to:

- Confirm which session you have been scheduled for within 3 business days of receiving your request.
- Provide the Zoom link for your session the day before it is scheduled.
- Prepare a consultation report within 3 weeks of the last small group discussion that will include a summary of our discussions, as well as answers to the questions from the Q&A chat function during the two meetings.

I look forward to virtually meeting with you all in a few weeks. In the meantime, the City's consultation website has been updated with additional information from our meeting last week. For more information, please see www.kitchener.ca/planningapplications.

Thanks,

Garett

Subject: [EXTERNAL] RE: 660 Belmont Avenue W - Small Group Discussion - Zoom Link - Session 3

Sorry, I was unable to attend this meeting, due to work obligations.

I have been following this development and attended presentations by the developer. I like the streetscape concept and access to the iron horse trail.

I am opposed to the request to approve an exemption to the existing height limitations. Frankly, the height is a factor, and the shadow will impact neighbouring homes, but most importantly, I look at the vacant lot on the corner of Belmont and Union (former gas station) and the property for sale on the south west corner of Belmont and Union, and I think book ends of towering buildings will have a negative impact on the neighboring properties that cannot be justified. If this project is approved there is nothing stopping a "twin" project at union. It will be the beginning of the encroachment of highrises in the neighbouthood. Just look down the street from Belmont and Glasgow toward Victoria. That will be our future neighbouthood.

This degree of intensification is not necessary, nor desirable in an already stable and vibrant community. A lot can be done with this property, including the streetscaping and housing units, that do not require doubling the current height restrictions. This is not a case where intensification is necessary to revitalize a neighbourhood. This is a healthy and vital neighbourhood, which deserves protection from over zealous development.

This neighbourhood is my home.

I am happy to engage in further discussions. Please keep me apprised.

Yours very truly,

Subject: [EXTERNAL] re 660 Belmont

Dear Mr Stevenson:

I write to you as Manager of Development Review. I had not realised that my email (below) to the Mayor would not become part of the public record.

To re-iterate, I wrote to Mayor Berry saying:

Dear Mayor Berry:

Conscious that I'm not a resident of Kitchener, I nevertheless wanted to share my note below with you. I live within walking distance of Belmont Village and enjoy it greatly.

I write about restaurants in the Region for the Record (co-incidentally my review this coming Friday features a half dozen Belmont food businesses) , and as such am privileged to see many corners of K-W. Belmont Village is a hidden gem and I believe a tower such as that proposed on the site of the Dettmer Garage to be out of scale with this part of the village. The Streetscape of the Village is part of its charm and I urge your Council to hold the line on height limits you already have in place for this special part of Kitchener.

I have not yet had any confirmation of receipt from Ms Vonwesterholt and would appreciate your confirmation that you have received my note to you.

Thanks for your consideration

Incidentally, I do not believe I ever heard back from Ms. Vonwesterholt, nor have I received any email updates on this development except from Please also – for the record, see my original notes to her, at the end of this email trail.

I'd appreciate your acknowledgement of receipt and look forward to hearing directly from your office about any further developments.

Yours truly

Subject: RE: 660 Belmont Ave

As a ps I do understand current zoning permits a multi-storey building, just one not so high. Developers are always pushing the envelope and Council seems to accommodate many despite the legitimate concerns of citizens. If they stay in their box in terms of height then I have far less issue with the development

From:
Sent: May 16, 2021 4:18 PM

Subject: 660 Belmont Ave

Greetings,

I was by the site of the proposed tower on Belmont Street today. I must say such an obtrusive 13 storey, I understand, building is totally out of character for that part of Belmont Village. The village is one of those rare oases in the city that we should seek to preserve the extant character of.

I would appreciate being added to any mailing list for public information/sessions related to the project. I live in Westmount and am often in the area. It would be a shame to damage or even lose it to such a development

Thanks for your attention. Please let me know my concerns have been registered.

November 23, 2021

Dear Mayor Vrbanovic and city councillors,

On behalf of MennoHomes, I would like to express my support for the redevelopment proposal of 660 Belmont Avenue West. To help provide some context, MennoHomes is a non-profit provider of affordable housing in Waterloo Region. This past summer we completed construction of a new 48 unit affordable housing apartment building at 544 Bridgeport Road East in Kitchener. We are currently working on plans for Phase 2 that will provide additional residential homes at that location. Zehr Group's $250,000 commitment towards this redevelopment is helping to make it possible and we are obviously appreciative of their support.

So how does this relate to the development at 660 Belmont Ave. West? We believe that in order to address the housing crisis, the city needs to support the full range of housing in the housing continuum. In addition, higher-density infill housing needs to be actively pursued if we want to be sensitive to issues related to climate change and land use. This project works towards those goals.

We believe that affordable housing is most successful for tenants when it includes support services. This is where the financial support that Zehr Group is providing to MennoHomes really makes a difference. We are able to leverage their donation by combining it with other sources of funding. In addition, we provide ongoing supports for tenants so that they are better positioned to thrive in their new home. This model of private sector developers supporting affordable housing by partnering with local non-profit housing providers has the potential to dramatically "move the needle" on the creation of affordable housing in Kitchener.

We appreciate the leadership role that Zehr Group has taken to adopt this approach in the development of 660 Belmont Ave. W. and we invite other developers to also pursue it.

Regards,

Dan Driedger
Executive Director, MennoHomes

Hi Garett,
I am strongly opposed to the doubling of the height of the proposed building.
It will create shadows on the neighbours and businesses in the area. This will also increase traffic flow in the surrounding area because it is built too far from the LRT line. The only people that will benefit from this proposal are the self-serving developers.
Sincerely,

Garett Stevenson

Dear Garrett,

Please consider this my strong opposition regarding the aggressive development proposal for 660 Belmont Ave W.

This kind of building has no place in the small village of Belmont and would do considerable harm; both to the village and the surrounding neighbourhood of Westmount.

Belmont and Westmount are a unique and cherished place in Kitchener...the only one of it's kind. I've lived here since 1998 and seen it flourish as a quaint and family friendly destination. I would be devastated if a massive building went up in the very heart of it.

Please deny the proposal as it will also set a precedence for the rest of the surrounding area. Please preserve this historical, unique and much loved village and neighborhood.

I trust you will make the right decision.

Sincerely,

Garett Stevenson

Subject: [EXTERNAL] New condo building at 660 Belmont St., Kitchener

Good morning Mr. Stevenson:

When I moved to 75 York Street in 1973, it was so lovely to move into a peaceful, charming neighbourhood. I have quite enjoyed living in this area for almost 50 years. Over this time, I have come to know several vendors and have relied on their professionalism especially at Dettmer Tires and Rexall. I am so sorry to learn that this area will be changing to condominiums and high-rises. There will be a high traffic volume, especially during the construction of this building. I also understand that all of the stores from Glasgow to Union will be changed into condominiums as well. That will anialate the peaceful neighbourhoods.

I don't really understand the need for the neighbourhood to change. I know progress is necessary, but I really think it is a shame. It will never be the same again.

Sincerely,

ơ1 York St., Apt. 509
Kitchener.

Hello Garett

Below are items and I would like you and the City to consider regarding the condo complex at 660 Belmont St. Some of these are things that others might have said on the call, including yourself, but we are repeating these for emphasis.

1. We heard you clearly say that change is inevitable and that some type of high-rise structure(s) will be going into Belmont. As a Social Work Community Developer/Planner/Agent of Social Change I agree with your comments regarding this. Change is inevitable and we are in agreement with the City/Region plan for high density vs subdivisions on farm land. We are not opposed to multi-story buildings. Our preference to ensure the uniqueness of Belmont Village is maintained would be to have structures that are no more than 5 stories. However, as the Village is currently zoned at 8 stories it is unlikely the zoning would be changed to decrease the building height. Therefore we would like to see the building no more than **10 stories**. We believe the builder is being unreasonable requesting zoning to 13 stories and fear that if this were to happen the number of stories would continue to grow over time when the City is considering future multi-story units in the Village.
2. We also heard you say that consideration would be made to construct a building that fits into the existing community that is Belmont Village. This is very important. And we hope the City is

able to work with the developer to **require** that the aesthetics of Belmont Village and its' surrounding communities are considered in the **design**.

3. We would also like to see the builder be **required** to ensure that the surrounding neighbours, Gildner Green Park and the Iron Horse Trail are **minimally** affected by shadows, noise, light, garbage, traffic, etc.
4. Something that was not raised in the Zoom meeting we attended is that the interior design of the building should provide optimal opportunities for community interaction. As we all leaned since Covid, a sense of belonging is crucial to the **wellbeing** of our citizens. There are ways to make high-rise living spaces that are more conducive to this. One of the better designed buildings for this that I've seen in the City is the apartment building on King St. (don't know the number) beside Voila Hair Salon and across from Sun Life near Union St. All doors into units are at the ends of the building rather than the typical long hallways that are more isolating. If you haven't seen this building I encourage you to visit. This is only one of many design elements that can encourage belonging in our high-rise buildings.
5.

I believe that Richard Florida would state that municipal oddities like Belmont Village are exactly the types of character sites that make cities unique and attractive to live in. We certainly do.

I dont use the term "character" loosely or in any type of exclusionary meaning. And I am not concerned for the neighborhood in general. I just strongly believe that the stretch of Belmont between Union and Glasgow is unique and a real asset to the community.

Development within such a zone needs to be done with great care as the uniqueness and attractiveness are easily destroyed.

My wife and I are opposed to granting the variances that have been requested for the proposed development. We have walked the perimterer and stood to look at the site from many different angles.

We believe that the proposed height and size of the building are totally out of character for the Village.

We understand that there are taller buildings nearby. But those do not put the Village into shadow. They are not in the Village itself. They are self contained with their own parking. They are within walking distance of the Village but don't form part of the village.

The area around the Village has a good mix of high density and single family homes. Many people can walk to the village and there is adequate parking for those that drive in. Its a destination.

We strongly believe that the addition of so many residents within the confines of that unique section of Belmont Street, will destroy the village's other businesses. The parking situation would deteriorate dramatically. The street's traffic density would rise. Its attractiveness as a destination would fall. Its not a simple calculation because the amount of traffic required to change the character of the Village irreversibly is not a formula you can easily predict.

Currently the Village is a destination for residents throughout KW. But that could change very quickly if poor development planning is allowed.

There is other available land for highrise development, as shown by the number of new buildings elsewhere in the city. There is no need to grant this particular development variance.

We oppose this variance request due to its height and size.

But we would not oppose a 25 meter tall building that is done in good taste with fewer residents and adequate parking within its own property envelope. We certainly believe that some development is going to occur and we hope council will be very cautious to not destroy this city enhancing feature.

Sincerely,

338 Glasgow St.

Subject: 660 Belmont - In Favour of Development

Hi Kevin,

I am coming a bit "late to the party" and trying to get up-to-speed on the development plans including neighbourhood consultation. Although I may presently be in the minority, I wanted to let you know that I am in favour of the new development.

As a close neighbour (in a highrise apartment building) and frequent customer of the pharmacy and stores in Belmont Village, I have seen the ups and downs and currently need to drive elsewhere for some essential items. While Vincenzo's is within walking distance, I would certainly welcome a small local grocery as part of the new development.

One thing I wondered was given the close proximity to Tim Hortons, whether consideration has been given to possibly expanding the footprint of the building and incorporating Tim's within the commercial operations. I have seen this done in other municipalities, and while it might involve their losing drive-thru service (not very busy by my observation), I believe that expansion of the development to the corner of Belmont/Glasgow might be a welcome addition, assuming the steep change in grade/elevation could be addressed.

I am participating in the upcoming small group session on March 17 and will voice my support for this project.

Should you have any questions, or wish to discuss, I have provided my contact information below.

Subject: [EXTERNAL] Concern regarding 660 Belmont proposal

Good morning,
When I first saw the notice about the plans for 660 Belmont, I was extremely disheartened.

There is no question that Belmont Village is a jewel in this city. Over the years, it has grown to become the kind of neighbourhood you would want to see if you were an out-of-town traveller. And you would be charmed and impressed by your visit.

The Village itself has attracted high quality shops, services, restaurants...and Bestival...that are diverse and entrepreneurial. The surrounding community is made up of vibrant, thriving residential streets lined with mature trees and houses that are often fronted by lush gardens.

This is a phenomenal part of the city to call home. I can certainly understand wanting to invest in projects that enable more people to live here, and I am not opposed to thoughtful development at 660 Belmont. The current proposal, however, is incompatible with the convivial spirit of the Village.

Plopping a high rise condo into the middle of it will effectively eliminate the very qualities this development seeks to exploit. Its approval will open the door for more ill-conceived "intensification" projects. Rather than making similar mistakes time and again, we need to be truly forward thinking about the evolution of our city and plan for sustained habitability. I think most residents would support development that enhances the space and nurtures the qualities that make the community appealing in the first place.

If we're going to build, let's do it with sincere reflection about what comprises an attractive neighbourhood. Most assuredly, reducing green space, increasing road traffic, and shading the streets do not contribute to that objective.

Thank you for your attention.

Neighbourly regards,

154 Esson Street, Waterloo

Garett Stevenson

Subject: [EXTERNAL] Development at 660 Belmont Ave. West

As I understand it, you are the go to person for the city's response to the proposed development of 660 Belmont Ave. West. I would like to share my concerns about that development as a longtime resident of Westmount. My wife and I have resided at 71 Rusholme Road since 1989. Our children grew up here and we have been strong proponents of this neighbourhood since that time.

I believe that the proposed development would be totally out of place on Belmont Ave. Doubling the height of the building does nothing more than add to the developer's bottom line. It provides nothing for the neighbourhood. Kitchener has studied the area and proposed limits on development that were acceptable. The city should stick to their findings. I am not opposed to development, but it should be done in a thoughtful way. This 49 metre high wall does not fit with the existing buildings and would be detrimental to the Belmont neighbourhood.

I have lived and worked in New York and seen what destruction unrestricted development can do. Neighbourhoods are destroyed when the human scale is ignored. If you look to some of the most successful and liveable cities in Europe, the historical and indeed, in many cases, current development is restricted to 6 stories. The benefits include fresh air, light and a reduced traffic flow. Belmont will be a horror with 49 metre buildings lining up side by side. You have only to look to King Street north of University to find a streetscape that offers nothing to their neighbourhood.

As you must know, there is considerable opposition to this proposal as it stands. The city must act in ways that are of benefit to its residents, and not just for the profit of developers. An enlightened vision of our city is preferable to one where profit is the only motive. Hold tough on the parameters already determined.

Sincerely,

Garett Stevenson

Subject: [EXTERNAL] Development in Belmont Village

Hello,

I live in Belmont Village. And when I say I live in Belmont Village, I don't mean I live nearby or in the "Belmont Village" condos, I mean I live in the little-known apartments in Belmont Village; my downstairs neighbour is Winnie's bakery.

I first moved into my building about 8 years ago. The apartment wasn't much then, and it isn't much now. But the rent was really cheap, even in those more reasonable times, and most importantly, my apartment is in a real neighbourhood.

I can walk uptown or downtown on the trail, I can go to the shops, or next door to the pharmacy, and there's a bus stop about twenty feet away. My neighbours are all single people that have lived in the building for years, some of them for decades. It's a real neighbourhood. And because I'm a woman living alone, I appreciate how safe it is.

In the period of 8 years, I'm now on my third landlord. They just increased my rent again (the minimum allowed). Last year, during a lockdown, they called me and, unashamedly, offered me two months rent to leave my apartment "to help in these tough times".

I pay about $600 a month rent now. They offered me $1200 to leave my apartment during a pandemic and a housing crisis. The part that bothered me the most was how they phrased it; that they were "helping" me out.

If you moved into my building now, $1200 is how much you would pay for a month's rent. They want me out so they can get someone in that will pay more.

But this email isn't to complain about my landlords. I'm going to stay in my building as long as I can because I have no place else to go. This email is to help you understand how the development of my neighbourhood is affecting people now. Now. And you want to add more here.

I don't know if you've ever looked up the area on Airbnb. I think you should, because you would see how many empty condos are available for stays. But I know researchers and advocates have given you all the evidence you would ever need that our city needs more low-and-mid-income housing, not condos, so I won't belabour this point.

I also won't remind you that high-density housing leads to more crime and more tension between neighbours, or the problems that inadequate parking will cause the local businesses. The ones that have been able to stay after all their rents have increased, I mean. Again, I'm sure you have been given this data.

The truth is, you can't do a proper cost-analysis on how much actual money the developments will bring in versus the potential social and economic problems that they will cause. But you don't have to. It's not a leap of imagination or empathy to understand how the charm of Belmont Village is the fact that it's small and (until recently) not over-developed. And further development will change it irrevocably, from a neighbourhood into just a bunch of buildings.

Who do you think will live here when there's no neighbourhood left? Do you really think people will browse the shops here? Walk their dogs here? Show off their babies to the ladies at May Court? Sympathize with the cashiers at Rexall about slow deliveries? Wait in line for doughnuts with their kids? Wonder out loud how much the big houses cost on Westmount? Complain about their jobs over beers at Arabella (and try to figure out the menu)?

When's the last time you took a stroll down University, or at the Boardwalk just for fun? Nobody does that because those places are a collection of buildings, not neighbourhoods.

We have so few neighbourhoods left. Don't destroy Belmont Village.

Subject: [EXTERNAL] Development Proposal 660 Belmont Avenue West

Dear Garett,

A senior, born and raised in Kitchener, the Old Westmount and Belmont Village have always been my most favourite neighbourhoods in which to live and walk. Quiet, mature tree-lined streets, lawns and gardens delight our eyes and ears and nourish our souls. When I learned the details of the proposed redevelopment of 660 Belmont West, my heart sank.

Should the developer be given a green light, Belmont Village's unique charm and calm, pleasant ambience will be replaced by unappealing, cold, overbearing concrete and glass high-rise structures increasingly common along major arteries. But wait - Belmont Ave is not a major artery!

And, the significant boost in population density will boost traffic density and noise. As calm and quiet as Belmont Village has been traditionally, residents living within a few block radius of the Village are awakened between 4:30 and 7:00 several mornings a week by trash pickup vehicles servicing Belmont Village. This has been an ongoing problem that residents have been trying to resolve for years with waste management service providers, Belmont Village businesses and Kitchener Bylaw Enforcement without lasting improvement. Redevelopment of Belmont Village along the lines of what is proposed for 660 Belmont West will add to this ongoing problem and create new ones. It will turn my neighbourhood into a place where I no longer want to be.

I will conclude with a post by Helene Beaulieu that expresses many of my thoughts and sentiments:

"Belmont Village is a Treasure!

There is no question that Belmont Village is a jewel in this city. Over the years, it has grown to become the kind of neighbourhood you would want to see if you were an out-of-town traveller. And you would be charmed and impressed by your visit.

The Village itself has attracted high quality shops, services, restaurants…[*omission mine*]…that are diverse and entrepreneurial. The surrounding community is made up of vibrant, thriving residential streets lined with mature trees and houses that are often fronted by lush gardens.

This is a phenomenal part of the city to call home. I can certainly understand wanting to invest in projects that enable more people to live here, and I am not opposed to thoughtful development at 660 Belmont. The current proposal, however, is incompatible with the convivial spirit of the Village.

The current height of 29 ft would be more in line with the present character of Belmont.

I assume that future development on Belmont would also be proposed at 29 feet and be kept the same distance from the street. Even then the character of Belmont will be very different than at present

Subject: [EXTERNAL] Belmont Village

Dear Garett
I am contacting you today to voice my extreme concern for the plans to construct a very large apartment building in Belmont Village. As I understand it, this initial building is to set president for future projects along the strip between Glasgow St and Union Blvd.
I purchased my home two blocks from Belmont in large part because of the village.
The community is so friendly and welcoming to all, however we could be totally overwhelmed by the the traffic, parking, loss of existing businesses etc.
Please help us preserve the integrity of our lovely community and not turn the village into a mini downtown.
Thank you for your attention.

Sincerely

Subject: [EXTERNAL] 660 Belmont Ave W

Dear Mr Stevenson, Councillor Johnston and Mayor Vrbanovic,

I write as a resident of the Belmont Village neighbourhood, but wish to point out that I am also a long-time member of the Waterloo Municipal Heritage Committee.

I have reviewed the various materials regarding the proposed construction at 660 Belmont Ave W. I believe a structure that exceeds the current maximum height allowed by the City of Kitchener by-law will do irreparable damage to the surrounding neighbourhoods and will be completely out of proportion to what should be considered as appropriate. We do not need higher density here, especially given the current amount of uninhabited new construction in the area. Furthermore, the commercial environment in Belmont Village will not support the increase in residential occupancy unless there is unacceptable expansion that will destroy the social, environmental and, especially, heritage ambiance of the area which should be preserved. I therefore urge that you reject the developer's request to exceed the maximum height permitted by the by-law.

Respectfully,

--

Subject: [EXTERNAL] Belmont Lane East

Dear Mr Stevenson, Mayor Vrbanovic and Councillors,

As a resident of the Belmont Village neighbourhood (with a lot on the border between Waterloo and Kitchener), I am writing to protest strongly the consideration of any sale of any portion of Belmont lane east laneway to the Zehr Group which is proposing to construct an building in Belmont Village that will exceed current building height restrictions as well as, possibly, other as yet unknown ones. I favour densification over urban sprawl, but this is the wrong way to go about accomplishing that.

Respectfully,

Subject: [EXTERNAL] A more thoughtful process please

I am writing to you not as an activist but as an ordinary citizen of Kitchener. The following concerns are not solely my own but represent thoughts and feelings that have come up in conversation with friends who unfortunately remain part of the silent majority as they feel their voices will never be listened to by elected representatives or those in positions of power. Although I have little hope that anything will change I cannot sit idly by.

Our concerns are focused on the rampant development in Kitchener and the unwillingness of city and regional councils to listen to the valid concerns of its tax paying citizens. We watch as the slow but steady influx of high-rise buildings alters the city that we have lived in and loved for years. We watch with horror as downtown Kitchener is transformed into a lifeless concrete jungle. We watch in amazement as farmland disappears and uniform rows of houses spring up, cars lining the streets. Yes, the economy is hot in Waterloo Region and intensification and expansion of the city is a natural outcome but this should be the time for wise decision making if Kitchener is to retain any measure of livability. This is a plea to slow down and listen. Bigger is not necessarily better.

We treasure access to green spaces and enjoy recreational opportunities in city parks and trails. If we have learned anything during the pandemic it is the importance of accessing nature and the green spaces that are so important to our mental and physical well being. Why is it then that developers are being allowed to build on postage sized lots with no set back and no possible room for lawns, gardens, trees or playgrounds? Why is it that developers are then allowed to pay a ridiculously small "penalty" fee with the money being used to improve a park in another location of the city?
Downtown Kitchener is becoming completely sterile. We find it astounding that Vogelsang Green, once a peaceful oasis where you could actually hear birdsong, as the name implies, has been "upgraded" to a cement slab with water starved saplings lining the perimeter. What a loss. Check out the photo from the summer of 2014 to see what used to be.
https://www.flickr.com/photos/matthewsmithphoto/14863252289
I drove past Vogelsang Green this morning and not a single person was sitting in the blazing sun. There were people enjoying the beautifully peaceful and shady lot of St. John the Evangelist church and even the shaded nook at the corner of the Duke Street parking arcade, both strong indicators of what people are seeking. With the ION in place and working-from -home a new reality for many people, it would be wonderful to see some of the parking lot wastelands remade into green spaces or even community gardens and not have the land passed along to developers.

We are very attuned to the repeated calls for affordable housing in the city. The School of Planning at the University of Waterloo has pointed out the demand for affordable, large (3-4 bedrooms), family friendly housing near open spaces and amenities. Yet what we see being developed is tower and tower after tower. The newest building proposal is of course the 44 story tower at Charles and Francis Streets in Kitchener. Besides being an ugly blight on the skyline, the building would offer nothing in the way of green space, adequate parking, curb appeal and most importantly affordability. With a proposed 530 units of only one or two bedrooms this type of accommodation will not suit families should they even be able to afford the cost. Neither this building or the current project underway by the same developer fit the concept of *Inclusionary Zoning* that Kitchener should adopt.
And where are the supporting amenities to be found including a basic grocery store? And will the residents feel part of a vital city ensconced in that tower? Not likely. The higher you live, the more disconnected you are from the world around you. And once again the pandemic has opened our eyes to the very negative effects of isolation and loneliness. Why are you so focussed on high-rise development? Profitable for developers but not the best solution for people.

One of the more interesting corners of Kitchener is Belmont Village. The variety of interesting small businesses, food options and proximity to the Iron Horse Trail all make it an accessible and fun destination. That could be about to change if city council once again approves a zoning amendment in favour of the developer and to the detriment of the community. Even the trees lining the Iron Horse trail would disappear if the developer gets his way..

We are not against intensification or expansion. But we are concerned about living in a city that we actually still like. We would love to see affordable housing for those who desperately want and need it. We want to see architecturally pleasing duplexes, multiplexes, stacked townhouses or low rise apartments throughout the city including the downtown core so there is a blending of ages and family units. We want to see development that is mindful of existing neighbourhoods and does not overpower them. (Thanks to the developer of the Mill Street project who removed the tower from his plans) We

want to see green spaces abutting or surrounding housing units so that people can get outside to connect with and enjoy the world. We want to see more connecting pathways, trees, and shade rather than hot concrete plazas and lifeless squares.

We want to see decisions made by city and regional councils that supports sustainable, environmentally conscious growth, not the demands of developers. We want the amendments to the building code in favour of the developer to stop! In too many cases developers are circumventing what should be mandatory features of development by contributing pitifully low amounts of cash to offset their negligence. The approval given by council for development at the corner of Frederick and Avon is a good example. Just how far will $25,000 go in providing affordable housing? Not far at all as we all know.

We want to see an ever higher set of standards that developers must adhere to, not the low bar set by Provincial building codes. We want to see LEED or BOMA BEST certification for all new construction. We want to see decisions made where people not profits come first. Are we demanding? Yes, we are. Future generations deserve our best efforts.

We have already achieved the status of being the second fastest growing community in Canada. Are we also going to achieve the status of being the most poorly planned unliveable city in Canada? We sincerely hope not.

Hello

Thanks so much for connecting with me regarding your thoughts on the proposed 660 Belmont Ave development.

I really appreciate hearing from you. It's important for myself and Staff to hear from all residents and I appreciate you taking the time to share your opinion with us.

I have copied in Mr. Garett Stevenson who is our Manager of Development Services and the Planner for this particular application. This way your opinion can be added to the report that Mr. Stevenson is preparing.

Thank you again. It was very nice hearing from you.

I hope you have had a great Thanksgiving weekend!

Kind Regards,

Margaret

I would like to put my support to this development. I think this is great for this area. This will give the local business a boost for their business as the same time attract nice restaurant etc.

The developer for this project is well known and respected and I am confident they will do a good job.

I have been living in Westmont for the past 18 years. I have seen how Belmont Village developed and it has been excellent. This will be the next phrase.

I fully support this project to gp ahead as proposed.

Subject: [EXTERNAL] 660 Belmont Ave. W

I would like to add my voice to the concerns around the proposed development at 660 Belmont Ave. W Kitchener.

I believe that the submitted request to increase the height of the building from 25m to 49 m makes this proposal too large and invasive for the existing street scape. Since Belmont Avenue is at a higher elevation than the streets to the east of it (Eden, Mount Hope , Wood , Gildner etc) it would certainly dominate this neighbourhood and over shadow it. Of course it would also overshadow the trail and the park at Eden and Glasgow streets.

The proposal for this building also comes with the suggestion that there would be fewer parking spots for residents than would normally be the case. This can cause more traffic and more parking on the nearby residential streets in the neighbourhood. I have noticed that several recent proposed buildings in both Kitchener and Waterloo have presented the idea of fewer parking spots with the assumption being that people will a) walk or b) bike or c) take transit to their work and for shopping. However, I believe that this concept demonstrates a total lack of empathy for older people who may not be able to walk or bike or take a bus, especially carrying groceries, and it also disregards the needs of anyone with a disability. Guest parking spaces are often sacrificed too in this model, so perhaps the expectation is that no one living there will really be allowed to have guests or care workers for that matter. Is this ageism? Perhaps.

I am unaware of any energy efficiencies in this building, or any green space (and indeed trees will be lost). Will the parking lot be permeable? Is there a green roof?

Of course there needs to be increased density in cities, but the older neighbourhoods tend to be a higher density anyway, and the density of this site will be increased if the building is 25 m. The street does not need a "sore thumb" at 49m The general height of buildings on the street in that section is 3 stories at most.

Thanks for taking the time to consider this note,
Regards

Re: 660 Belmont Ave

Since the date of my first letter to you, there have been a number of public meetings and a great deal of additional information and discussion about the proposal for developing this property. I'd like to add to my comments in my previous letter.

I understand the need and desirability for higher density residential buildings in an area as close to the core as Belmont village; indeed, the by-law recognizes and permits higher density in this stretch of Belmont Avenue. But, in my view, the by-law restricts that density in a way to respects the surrounding neighborhoods. I am firmly opposed to the request to build a complex more than twice the height allowed under the by-law.

In my view, the current height standard for 660 Belmont accurately captures and preserves the transitional role that this section of Belmont Avenue serves in the middle of the broader Westmount neighborhood. To the north and west of Belmont, the neighborhood is single family dwellings; to the east and south, higher density buildings and the LRT. Belmont Avenue with two-storey residential apartments, small restaurants and shops has long provided an easy, gentle segue toward the downtown.

At this moment in particular, Belmont Avenue's role as a transition area is critically important to the continued health and walkability of the broader neighborhood. Further development along Belmont Avenue is inevitable and imminent; 660 Belmont will set the standard for every application that follows.

I urge the City to reflect on the unique nature of Belmont Avenue and preserve its status. Firmly enforcing the current height restriction is a critical first step. Setting high standards for set-backs and landscaping, as I outlined in my earlier letter, are important and necessary reinforcements.

Sincerely,

194 Claremont Ave.

To: Juliane Westerholt
From:

Re: 660 Belmont Ave

This proposal to develop the Dettmer Tire site marks a significant change to the landscape of Belmont village and, by extension, to the entire Westmount neighborhood. It is a change that ought not to be undertaken lightly; indeed, it should be studied closely for the immediate changes to the landscape but, just as importantly, for the precedent that will be set for other proposals to develop the village that will, inevitably, come to Council.

I understand the need, indeed the desirability, for higher density in this neighbourhood and I support those initiatives. Further, I believe the proponent has produced a thoughtful design that respects the surrounding neighborhood of trees and homes. The proponent is to be commended for those efforts.

Still, I believe it is important for Council to set the highest standards for this proposal because this development will most assuredly be followed by others further north on the east side of Belmont. Now is the time to set the bar and set it high.

I suggest that there are three aspects of the proposal that present an opportunity for Council to realize the goals of its strategic plan and demonstrate its commitment to a sustainable community.

1. Removal of several trees on the east side of the site (the iron horse trail)
2. Landscaping proposal for the west side of the site
3. Greenspace around the site

Mature trees along the local transportation network

The Iron Horse trail is an important part of the transportation network for the City of Kitchener; a network that the City of Kitchener expects to be "safe, convenient *and comfortable*". Large trees contribute much to the comfort of that transportation network.

In the tree management study, the proponent identifies thirteen mature trees along the iron horse trail; only three of which will remain. One of the larger trees to be removed is a black walnut (with a 10 m diameter crown) described as being in "good" condition.

When Council reviews the tree management plan, I urge members to recall that one of the most prized aspects of the Westmount neighborhood are the trees and the walkability of the entire area. As the picture below illustrates, the canopy of mature trees in the section of the trail behind the Dettmer site is particularly welcoming to walkers, runners and cyclists.

The black walnut, in particular, has historic significance to the Region; early settlers were attracted to the Region in part by the significant girth of black walnut trees that suggested fertile, farmable land in the area.

Council has an opportunity to attach rigorous and significant tree *preservation* conditions on the east side of the site. At the same time, Council should attach specific conditions directing that any trees that are removed be replaced with trees of *significant and large caliper* size.

Landscaping on the west side of the site (east side of Belmont Ave)

In recent years, the Belmont business improvement area, together with the City of Kitchener, has made important strides in improving the streetscape of Belmont Avenue. The pictures below illustrate the landscaping efforts on the west side of the street in the block one north of the site. The plantings on the boulevards are significant; the trees are a large enough to cast shade on a sunny afternoon. Along with the recent changes to convert some parking to a shared patio the block is inviting and restful. The block where the site is located (on the east

side of Belmont ave), by comparison, is barren: no significant sized trees and minimal landscaping.

West side of Belmont Ave

East side of Belmont

Here again, Council has an opportunity to set a high standard for landscaping on Belmont Avenue in two different but complementary ways.

1. **Council should attach a condition requiring a significant setback on the west side of the building to promote a pedestrian- friendly and welcoming "promenade" rather than a minimal "sidewalk".**

2. **Council should attach a condition requiring *significant* plantings on the west side of the building; including, large caliper trees that will throw shade on the sidewalk and break the wind thus greatly improving the comfort and walkability of that area.**

3. **Council should attach a condition requiring seating areas on the west side of the site to, again, improve the comfort and walkability of this part of the transportation network**

Green space on the site

Other condominium developments in the area (the Brick Brewery site, the Bauer site) have provided very little green space in the immediate area of the buildings (see photos below). Presumably, Waterloo Council was satisfied that the sites' proximity to the iron horse trail was sufficient to address any concerns about green space or, indeed, space for pets living in the building to relieve themselves.

I urge council to impose conditions and set a high standard for significant green space throughout the site (and without relying exclusively on the proximity of the Iron Horse trail) to ensure that this development, and the others that follow, continue to build on the heritage and appeal of the Westmount neighborhood.

A word of thanks to City staff

I would be remiss if I did not take note of the efforts of both our local Council member, Marg Johnston, and City staff in notifying the local neighborhood.

This proposal is significant both in terms of its impact on the neighborhood and in terms of the precedent it will set for the ongoing development along Belmont Avenue that will surely follow. It is vitally important that a broad range of neighbors have the opportunity to examine the proposal closely and comment upon it. Staff distributed a notice to many neighbours and the City's use of "sharepoint" software greatly enabled all of that.

As residents of Belmont Village area we wish to voice our concern regarding the development proposal for 660 Belmont by Zehr Group.
Our concern is the proposed height of the building which is double the City of Kitchener's height maximum for this location.
Belmont Village is a unique gem within the city. We recognize that some intensification is necessary. However the size of the proposed development would set a negative precedent for other developments which would destroy this unique and special place.
Please follow your own by-law and allow development not to exceed 25 metres in height.

Hello Juliane,
We live at 139 Wood Street, so are very interested in how development and infilling happens in our neighbourhood.
Regarding 660 Belmont LP Inc., it would seem that a building of 13 stories would be excessively high. Even at 8 stories, it would be significantly higher than any other building in that Belmont Village corridor.
Please count us among those who oppose the proposed amendment.
Thank you,

Subject: RE: [EXTERNAL] 660 Belmont

Hello,

The new zoning by-law (Zoning By-law 2019-051) was under appeal (unrelated to this application) but is now in effect. The current zoning of the property is *MIX-2: Mixed Use Two* which permits a maximum height of 25 metres and 8 storeys.

As you note, there is an Official Plan policy that provides direction when considering additional height, subject to the criteria. The Official Plan Amendment application requests to increase the maximum height to 13 storeys and 49 metres in height. Currently, the Official Plan permits a maximum building height of 8 storeys or 25 metres. However, an increase in building height, up to 50% (in this case, 12 storeys or 37.5 metres), is permitted for mixed-use buildings without an Official Plan Amendment. My opinion of whether or not the a development concept satisfies the criteria in Policy 15.D.4.23 will be in my staff report, which is not yet prepared. I will share the updates on this development application at www.kitchener.ca/planningapplications.

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont

Hi,
I'm doing some fact checking about the proposal at 660 Belmont and was hoping you could help. In the application report it mentions the site is zoned for 8 stories under the existing zoning as well as the new zoning that is being held up by an appeal (this info was directly from developer), but they also mention (possibly) qualifying for 12 stories (see italics below) and that the variance is for the 13th story which is a mechanical area. Would it be possible to get more info on how close they are to meeting the requirements for the additional 50% and what some of the terms mean (eg. pedestrian scale base, massing along the streetscape, compatibility etc).

Section 15.D.4.23 does identify that City may consider increase heights up to 50% of the permitted building for building mixed-use building containing residential units, where they have "a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied.

More than anything, I'm hoping to gain a better idea of the context of the application. Is 660 Belmont zoned for potentially 12 stories and the developer is applying for a 13th, or is it zoned for 8 stories and they need to meet quite a few requirements to be allowed the 50% extra (+ 1).

Thanks for your time,

Garett Stevenson

Subject: [EXTERNAL] Comments on 660 Belmont Avenue West Proposal

Follow Up Flag: Follow up
Flag Status: Flagged

Juliane
Thanks for info you have been distributing about proposal for 660 Belmont Avenue West. Unfortunately family matters kept me from attending the December meeting. However I have the PowerPoint presentation and have signed up for next week.

As I recall from about 2012 when City was updating plan for Belmont Corridor my main concern was the need for additional park space with intensification. There is a dearth of park space in Mount Hope and Westmount area which this plan seems to only worsen. Since 2012 when travelling to neighbourhood commercial areas I have observed the successful vibrant ones are generally low rise while high rise areas tend to be cold and unwelcoming. An example of current development that works is from Toronto's Riverside/Leslieville area along Queen St. East, where streetscape is being maintained low rise with high rise structures set back.

So here are my reasons for opposing proposal:

- No tall structure next to street as they create a cold (particularly in winter), unfriendly, non-human scale environment. I would call this building "Godzilla" style, towering over Belmont Village to destroy all. Essentially this building design is for a central core area only.
- No reduction of parking requirements – without adequate parking building visitors will take up parking spaces of current businesses making them less viable.
- No provision for additional park/public space.

Yours sincerely,

Subject: [EXTERNAL] 660 Belmont LP Inc. Zoning By-Law Amendment Application - Oppose

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Ms Von Westerholt,

I am in receipt of your document dated 7 August 2020.

As a nearby property owner I oppose this zoning by-law amendment application. The building of a 13-storey structure in Belmont Village will completely destroy the streetscape, and this uniquely flourishing section of Kitchener.

Westmount is a 'small neighbourhood' with large trees, beautiful homes, lots of families, and retirees. Adding this proposed structure will be detrimental to this beautiful heritage neighbourhood. Part of the reason this neighbourhood is so highly sought after for home ownership is because of its character, charm and beauty. Belmont Village and the surrounding streets are high pedestrian traffic areas of Westmount - this proposal for 163 residential units will create volumes of vehicular traffic that none of us want. A 13-storey building has no place in this stretch of Belmont (e.g. Glasgow to Union).

In fact, I was shocked and surprised current zoning allows for an 8-storey structure on that site – that already far exceeds what should be permitted. There should be no buildings along that stretch of Belmont that are higher than any of the existing structures. Are you at liberty to tell me how long that stretch has been approved for an 8-storey building? Was that a recent change? And if so, who applied for it?

Yes, please add my contact information to be notified of future information/meetings.

Many thanks

Dear Ms. Von Westerholt,

I am writing to provide comments with respect to the proposed development on Belmont Avenue by 660 Belmont LP Inc. on the current site of Dettmer Tire as outlined in your letter dated August 7, 2020. I appreciate your willingness to accept comments about this project.

The proposed development is not appropriate for this stretch of Belmont, known as "Belmont Village". Belmont Village is a unique and vibrant community of small businesses (many of which are local restaurant successes) with a very pleasant streetscape made up of one-storey or two-storey structures only.

The Explore Waterloo Region website[1] describes it as follows:

> "Belmont Village is home to fine dining, numerous specialty shops and original experiences. Located in the heart of Kitchener, Belmont Village is one of the city's oldest and most unique shopping districts."

The proposed development will be a monster structure towering over the Belmont Village landscape and will be completely out of step with the other properties located there. While I have read in your letter that the site is currently permitted to have a structure of 8 storeys in height of up to a total of 25 metres, the proposal of 13 storeys and 49 metres in height is twice that which is permitted and is absolutely ludicrous. But regardless of what is currently permitted, anything on the Dettmer Tire site that over 2 storeys in height and dissimilar to the

[1] https://www.explorewaterlooregion.com/listing/belmont-village/

scale of the other existing neighbouring structures will destroy the streetscape and it will significantly, adversely affect the character, as quoted above, of "one of the city's oldest and most unique shopping districts".

In support of my position, I am enclosing a copy of the "City of Kitchener Urban Design Manual - PART A URBAN STRUCTURE & BUILT FORM" for central neighbourhoods.

I ask you to consider the following extracts from this City of Kitchener document:

- Provide a built-form which respects and complements existing neighbourhood characteristics, including heights, setbacks, orientation, building width and length and architectural rhythms.
- Conserve and retain built forms that are representative of the established neighbourhood fabric and/or make positive contributions to the neighbourhood identity.
- Respect existing and planned contexts, heights, building lengths and massing.
- Ensure new buildings do not appear substantially larger than the existing buildings. If a larger building is proposed, its massing should be subdivided into smaller, compatible pieces.
- Design all buildings to limit shadowing on the public realm and on adjacent properties
- Complement the existing development pattern of the neighbourhood in terms of building location, building height, landscaping, setbacks, entrances, windows and other architectural elements. The use of repetitive or generic design is discouraged.
- Respect the rhythms of design elements from the existing neighbourhood and streetscape. This rhythm can be found through massing, materials, details, and architectural features.
- On a street where existing elements (e.g. architectural styles, porches, building placement, materials etc.) are recurring, new development should reflect some or all of the key elements, sensitively interpreting these elements to reflect contemporary design approaches.

Thank you for considering my comments.

Sincerely,

cc. Councillor Margaret Johnston (Ward 8)

Subject: Kitchener project concern

Hi Scott,

Hope you are doing well. I can't believe it has been so long since we last spoke.

I want to reach out to you about a project in my neighborhood (ward 8) that has me concerned. I know I am not in your ward but you are always been a voice of reason on council. I will always remember the clever solution to come up with for overcoming our concerns at Westmount Golf Club when I was President of the Club in relation to the cultural heritage landscapes issue. That was a "win" you helped us with!

The project I am concerned about is a proposed condo development on Belmont. It is named "660 Belmont" based on its address. It is the heart of Belmont Village. I live on Claremont and my house is 3 blocks from Belmont Village so it is an integral part of my community.

I am in favour of things that improve our city but this project one seems to fall offside what I consider to be an improvement. Zehr Group is the developer. Don Zehr lives 4 doors down the street from me and I have conveyed my concerns to him that it is too high. I know there are many others in the neighborhood who are concerned about it including a grass roots group named the "Friends of Belmont Village".

As I said, the issue is the proposed height. The current by-law height limitation is 25 metres (8 storeys). The developer is proposing to double the height to 49 metres. To achieve this they also need to buy the abutting city-owned Belmont Lane East.

The building will be a monster looming over Belmont. Belmont, as it passes through Belmont Village, is very unique street in KW. It is not dissimilar to intentionally wide streets in some European towns that were designed as special gathering places. I think of my time when I was a student at Oxford University and Broad Street in Oxford, so named because it is a broad street that acts as a public gathering space that is a unique street in that English city. Oxford is full of narrow streets and one gets a great sense of space to breath when entering Broad Street. I get the same feeling at Belmont Village.

In its present form, with low rise buildings, Belmont Village is unique. I am not against upgrades and improvements but the project proposed is extreme. I am also concerned it will set a dangerous precedent that will lead to further huge buildings in the Village that will destroy the unique "breathing space" that it is.

In looking more into this kind of issue and unique neighborhood setting to see what other cities have done, I have discovered that Toronto has special rules that got put in place for specific Toronto neighborhoods. Samples attached – Forest Hill Village and Leslieville. Toronto is a hotbed of new development but they recognize when it needs to be carefully planned in certain special neighborhoods. It would be ideal if we could get Kitchener to follow Toronto's lead and adopt special rules for Belmont Village. This would clearly be better so that we get entire Belmont Village area restricted rather than just the 660 site.

Again, I am not against development. I just don't see the 660 proposal as right for Belmont Village.

Any ideas?

Garett Stevenson

Subject: [EXTERNAL] More thoughts regarding 660 Belmont

Follow Up Flag: Follow up
Flag Status: Flagged

Further to my comments about 660 Belmont, I believe that parking will be a major concern. With only 30 surface parking spaces - some of which will be taken up by residents of 660 Belmont - where will visitors park? They will park on neighbourhood streets as well as take up the parking designated for Belmont businesses, resulting in a loss of business for Belmont Village and crowded conditions on neighbouring streets. This will prevail with an 8 storey building, and will be very much magnified with anything higher.

Subject: 660 Belmont

I am not in favour of the proposed amendment. The current designation is for an 8 storey structure. I am very much against allowing the building to be any higher, as it will negatively impact the surroundings as well as set a precedent for future planned buildings in the area.

There is quite a bit of information missing from this letter, namely supporting materials such as what the building will look like, traffic study, environmental impact, sewage system etc.

I also find that the September 7th due date for comments is unreasonable and rushed, in that many residents are either away or getting prepared for school, work, etc.

Letters have been mailed to very few homeowners. However, please know that what happens in the Belmont Village area affects a far greater number of people than the residents living in close proximity to the proposed building. I hope that their comments will be taken into consideration as well.

Further comments were requested before your January 11th deadline. Here are mine:

Height: The scale of the proposed development is extremely disproportionate with the buildings in the rest of Belmont Village, which you know are either one or two storeys high. The proposed height of 13 storeys will profoundly affect the surrounding neighbourhoods and future development in the village in a negative manner. One should also refer to metres, rather than storeys, since each condo unit will have higher ceilings than normal. As a result the structure will be markedly taller than a typical 13 storey building.

The current bylaw allows for a structure no higher than 8 storeys. This bylaw was recently changed from 4 storeys to 8 storeys...a doubling of height from what it was previously. Even at 8 storeys, a structure would be much higher than the current buildings in Belmont Village.

Appropriate development fits in with its surroundings. This building certainly would not. Many of us are concerned that the village atmosphere and charm will be lost. As you may be aware, there is also a developer (Lexington Park) who owns multiple buildings from Rexall PharmaPlus to a tattoo removal business. He is now purchasing buildings on the opposite side of Belmont. Mr. Zehr also owns the property next door to 660 Belmont. If the plans for 660 Belmont are approved, the floodgates will be open for yet further developments of great height to follow suit. Belmont Village will become an area of high buildings and will lose its unique and attractive atmosphere.

Traffic and Parking: I find it difficult to believe that traffic will be less than it currently is with Dettmers Tire, as stated by the traffic study. (We are still waiting to learn when this traffic study was conducted.) In a contact with Dettmers Tire it was determined that the maximum number of cars daily is 40, and this only during their busy times of year (fall and spring). One simply can't envision there being less traffic with a 13-storey building. This traffic will also be increased because of the proposed businesses on the main floor. Do not assume that everyone walks or cycles. The parking areas of Belmont Village are already full at this time, as are the streets which adjoin it (Rock, Claremont and often Earl). Also, with the lack of surface parking on the property, where will 660 Belmont visitors for the 168 units park? It will be challenging enough to find parking with an 8 storey building.

Conclusion: If the developer feels that a structure of reduced height is unprofitable, an alternate site is the only sensible path.

Subject: RE: [EXTERNAL] Re: 660 Belmont Avenue West

Hello,

I am following up to confirm that I have received your comments and they will form part of the engagement record for these applications.

I am now scheduling small resident meetings to discuss this application. Within 3 weeks of the final small resident meeting, a comprehensive engagement report will be prepared that will include responses to all questions received through the Q&A function from both Neighbourhood Information Meetings. The report will include summarize the small groups discussions. I have confirmed you were on my email invitation yesterday regarding the small meetings. Please let me know if you have not received it.

The decision of whether or not to sell Belmont Lane will be determined by Kitchener City Council. Generally, the process for sell City-owned land is as follows:

- A potential purchaser contacts the City of Kitchener with a request to the purchase land
- City internally circulates the request to City Departments to determine if the land is to be retained or if it could be sold
- If the lands are required to be retained (current/future City use, infrastructure) the applicant is advised that the request cannot proceed
- If the City deems that the land is surplus and can be sold to the applicant subject to Council approval then the following takes place:
    - The City engages an AACI Appraiser to value the land
    - A Staff report is prepared recommending the land be declared surplus, notice be given to close the road and staff be directed to negotiate the sale of the land to the applicant at a price which shall be the Fair Market Value including any conditions
    - The Staff Report is tabled at a public meeting of Council where the public can provide their input regarding the sale – in this case the development applications and lane sale would be the same staff report so no timing is known at this time
    - Public notification is typically through the Staff Report and the agenda and meeting date posted on the City's website – in this case everyone who participated in the process will be made aware of any public meetings on these applications
    - Council will vote on the request and if they agree to sell the land will enter into an Agreement of Purchase with the applicant
    - On the closing date the applicant will provide the City with the sale proceeds and title will be transferred to the applicant

Section 42 of the Planning Act gives the City the authority to require parkland dedication as a condition of certain types of development. Local approval authorities, like the City of Kitchener, are responsible for preparing a Parkland Dedication Policy which outlines the criteria for requiring parkland dedication (as land or a cash payment) and to plan future park needs. The current Parks Strategic Plan outlines where parkland is needed and provides strategies for acquiring the needed parks. Recent and future investments in the Iron Horse Trail are also intended to strengthen a key active transportation corridor to connect residents to trails and parks throughout the City. The provision of parkland to support growing communities occurs at both a macro (City-wide scale) through the Parks Strategic Plan and also at a micro scale, through site specific developments, where appropriate and feasible. Additionally, every development is required to provide private amenity space to accommodate the occupants of the a building.

Thanks,

Garett

I am in receipt of the "What We Heard" summary, which was issued by you on Friday, February 19th. In some aspects it is somewhat inadequate. It is practically an exact copy of the "What We've Heard So Far" slides shown at the first NIM on December 17, 2020, with one difference being the inclusion of several spelling mistakes or 'typos'.

Following the first NIM, the commitment was made to *"...prepare a summary of What We've Heard.... and will also include the answers to the questions raised at the NIM, as we were not able to answer all questions during the allotted time"*. Much was promised, but delivery of these commitments fell short. Participants and members of the community had been given the opportunity to forward additional questions to you before a deadline, which many residents did. A number of these questions are still unanswered as of today and/or not acknowledged. It was rather unfortunate to have highlighted only 15 comments based on multiple responses for the "What We Heard" document, with the consequence of there being omissions re single comments, some of which carried great importance.

For example, questions such as:

What is the status of negotiations regarding the possible sale, by the City of Kitchener, of a portion of Belmont Lane East to the developer? When will the public have an opportunity to speak to City staff and Council regarding this transaction?

Where will green space be added based on the provincial requirement to provide additional green space when the population density is increased?

I recognize that there are other questions raised by community members which need responding to and/or clarification.

Thank you for your attention to these concerns.

> THE RECORD'S VIEW

Let's deal with our region's growing pains

Welcome to Waterloo Region, the second-fastest growing urban area in Canada.

It's the best of times if you're a developer racing to build housing and workplaces for the thousands of people streaming in here every year to join a red-hot economy. But it may be the worst of times for many longtime residents who despair that the neighbourhoods they've loved are literally being bulldozed before their eyes.

For proof of this tale of two regions, look no further than recent Record headlines. On Thursday, worried Cambridge residents grilled a developer who plans to build a massive warehouse that could create 1,400 jobs. Just days before, the province's planning tribunal approved a 10-storey highrise in east Kitchener — despite the fierce objections of neighbours in single-detached homes who'd fought the development for years. The week prior witnessed the official green light for a project in downtown Kitchener that, in the face of concerted opposition, had been pared back from a 12-storey, 176-unit complex to a four-storey stacked-townhouse venture with 76 units. Even that will forever change an elegant old residential neighbourhood.

Nor has the countryside been spared its own upheavals. Residents of Wilmot and Woolwich townships are currently protesting the opening of gravel pits that would create traffic woes even while mining the aggregate needed for the local construction going on. And that's how it is in 2021. Not a day passes without the region changing in a new way. Barely a day goes by without someone shouting "Stop!"

To be sure, Waterloo Region is not unique for having residents who want to halt, slow or simply influence growth. It is unique, however, for the sheer amount of growth it's experiencing. In the five years that ended in 2020, the region's three cities grew by 50,000 new residents. In the entire country, the region's annual two-per-cent population growth rate is exceeded by just one city — Oshawa.

In so many demonstrable ways, this growth is a boon. An urban renaissance is happening in our city cores. Directing development into existing and more densely populated neighbourhoods uses infrastructure more efficiently while protecting our countryside. We're growing up — in every way.

Yet a substantial proportion of the people already living here feel they've lost control of their own communities. If it's no consolation, it's at least worthwhile to realize provincial and municipal planning policies, approved by elected leaders, are all responsible for the rate and concentration of this growth.

But even if our future means growth, developers and municipal politicians can become more attuned to the public's wishes. Perhaps there should be fewer skyscrapers and more three- or four-storey condo and apartment complexes. Surely our local governments could do more to ensure new developments, large or small, are more architecturally and esthetically compatible with existing neighbourhoods. And our cities could be far more active in creating new parkland.

Meanwhile, we must more than ever commit to addressing the housing needs of lower-income residents being displaced by urban gentrification and intensification.

These are merely suggestions for an overdue, regionwide discussion. Growth is here. It can, managed with greater sensitivity and public participation, be a blessing. But it all depends on whether we harness this engine of change to build something better for everyone in Waterloo Region or allow it to run amok and demolish more of the priceless inheritance that's already here. This region is experiencing growing pains. Let's heal them.

Hello, Juliane. Due to my compromised immune system, my husband and I are unable to attend any kind of public meeting, so we're sending our thoughts by email to you, copying our City Councillor and the Mayor.

We live in the Belmont/Glasgow neighbourhood known as old Westmount, and we strenuously object to the addition of a high-rise building to Belmont Village. Kitchener already has a dismal record with respect to preserving historically valuable neighbourhoods and buildings. In other cities, it is such areas such that give irreplaceable charm, character, and soul to a city, attracting both new residents and tourists. This section of the city is one of those gems.

The name Belmont Village says it all -- high-rises have no place in a village. I understand the motivation for profit and a wish to increase population density in the city core as a deterrent to urban sprawl. However, liveability has, or should have, equal weight in terms of public health and attracting businesses to an area. High rise locations should be chosen with great care so that already eminently liveable communities like ours are saved from destruction.

The goals set out in Kitchener's Strategic Plan include health and well-being as well as maintaining a caring community. That's what Belmont Village contributes to all who live within range of its small-town feel. It nurtures citizens such as recently deceased Irma Kadela, whose life was chronicled in *The Record*: https://www.therecord.com/life/2020/08/17/lifetimes-brilliant-librarian-brought-many-luminaries-to-region.html The article and those who spoke at her funeral referred to the importance of Belmont Village in her life. Her story is far from unique. And if you still prefer to rank profits above people, you might want to consider what effect high-rise enterprises will have on the desirability of nearby homes and their associated market and tax value.

We beg you to protect our neighbourhood from high-rise infringement.

Thank you

From Margaret Johnston
January 9, 2021

Hello

Thanks so much for taking the time to send in your thoughts regarding the proposed development at 660 Belmont Ave. I appreciate you copying me in. It is important for me to hear the community concerns as well as seeing the questions that residents have.

Juliane will address your questions below. There will be further follow up after the questions and comments are in next week.

Thanks again.

Kind Regards,

Margaret

Margaret Johnston

Subject: [EXTERNAL] Re: 660 Belmont

Hi, Juliane. Thanks for your email.

In response to your invitation to provide additional feedback and to ask questions about the proposed development at 660 Belmont Ave., I would like to offer these thoughts.

1. First, I would like to describe our reaction to the meeting on December 17, 2020. I would have to say that we were most distressingly dismayed and disillusioned by our overall impression that the development certainly appears to be a done deal. The only people who had the opportunity to speak at the meeting were representatives of the City and the developer, all of whom seemed to support the exception that would allow the building to be constructed. Any community members' questions that were read were responded to with what I can only describe as "spin," including skewing the usual and customary definition of "compatible." Even what appears to be a superior high-rise building cannot realistically be considered to be "fitting in" with its neighbours. There is no way any reasonable person could contemplate the architect's rendering of the proposed streetscape and call a 13-storey building compatible with the surroundings.

   A further impression from the meeting was the enormous credibility gap between Don Zehr's words and actions. It was difficult to maintain a straight face while listening to him describe his sentimental attachment to Belmont Village and his purported great desire to preserve its character, all the while promoting what is undoubtedly a profit-motivated enterprise that will assuredly destroy that very character.

   I have never been involved in this kind of event before, and I naively supposed that it would be a somewhat democratic process in which the viewpoint of the community would be listened to, valued, and acted upon. I realize now that once again, just as at the provincial level, it seems to be a foregone conclusion that the developers will have their way. In the case of the province, so-called progress is at the expense of the natural environment, and here, to the detriment of the built environment.

   I submitted this question at the meeting, but since we are not to receive responses to in-meeting questions until after the deadline to send in our further thoughts, I'll ask again. In the history of Kitchener, has any development ever been successfully prevented by community action? Or is this entire process simply an exercise in futility?

2. I've been told that I just don't want change, but that is not the case. As I've said before, I realize that an important goal is to help prevent urban sprawl by increasing population density in the core areas. I am fine with high-rises being constructed along Belmont on the south side of Glasgow, where some already exist and where there is no village atmosphere. At the meeting, I heard repeatedly that the official plan designates Belmont as an urban corridor. To me, that description doesn't necessarily mandate high-rises, and I would suggest that if that is the meaning of the plan, then it is flawed, at least with regard to Belmont Village. Once again, I'll say that this area represents a livable, close-knit community gem that should be preserved. And we're not talking about a large area – just the block between Union and Glasgow. In other words, the urban corridor designation should end at Glasgow. Surely the Official Plan could be modified to allow the preservation of such a localized valuable community asset. How would we go about having that happen, not just for Belmont Village, but for other areas that might fall under the same umbrella?

Here are the follow-up items from the meeting:

- Studies submitted with this application, as well as the video presentation from the applicant can be retrieved through this link.
- The City's website has been updated to include the presentation material from the meeting for your reference. Please note that this does not include a recording of the meeting, which was the original intention, as staff was not able to resolve the logistics regarding privacy procedures prior to hosting the meeting.
- Please share your comments and additional questions on the application by emailing me or calling me by January 11, 2021.
- Please share your general feedback on this meeting through this survey

After January 11th:

- I will prepare a summary of What We've Heard and forward it to you
- I will also include the answers to the questions raised at the NIM, as we were not able to answer all questions during the allotted time.

This was not your last opportunity to participate or provide me with comments. Staff will evaluate the feedback received to date and, in consultation with Councilor Johnston, will determine the next steps for engagement.

You are always welcome to call me at the number below if you wish to chat. I look forward to hearing from you soon. In the meantime, I would like to take this time to thank you once again for your interest in this file and wish you and your family Happy Holidays and a healthy and prosperous New Year in 2021!

Sincerely,

Juliane

Juliane von Westerholt , Senior Planner| Planning Division | City of Kitchener
519-741-2200 x 7157 | TTY 1-866-969-9994 | juliane.vonwesterholt@kitchener.ca

3. I realize that the zoning cannot be changed in time to affect the building at 660 Belmont, but I believe that a height of even 8 stories is far too high for that side of Belmont. I would like to know how the zoning could be changed to match the 4-storey limit on the other side of Belmont. In any case, and hopefully without what I feel is underhandedly redefining words, the 50% higher application should most definitely be turned down on the basis of incompatibility. Please let me know how to have the rest of that side of the street rezoned.

4. I would also like to ask about the provincial requirement to provide additional green space every time the population density is increased. Where will you add green space? The only area that seems to me to be available is the now-vacant lot at the corner of Union and Belmont. What are the plans for that land? Will another 13-storey building be permitted, and then others be allowed to fill in the remainder of that side of the street to create a "canyon" effect, as is happening on King and Albert in Waterloo? I believe we need areas like Belmont Village as "breathing space" in such a soul-shrinking, dehumanizing landscape.

5. I'd also like an explanation about the ratio of four that seemed to be the underlying rationale governing the height of the building. What is it, how was it established, and why should it be allowed to overrule reasonable considerations of aesthetics that would ensure the preservation of such a civilizing and eminently livable area as Belmont Village?

6. One other smaller point I would like to raise is the parking allowance. Surely, each unit in a high-rise must be allocated at least one space? The numbers cited at the meeting didn't seem to adhere to that concept. To me, it doesn't seem reasonable to assume that there will be enough occupants with no vehicles to compensate for the ones who will have more than one. Commercial units, in particular, along with some residents, would require multiple spaces.

Thank you so much for coordinating all of the organization details, and I look forward to your response.

The only people who had the opportunity to speak at the meeting were representatives of the City and the developer, all of whom seemed to support the exception that would allow the building to be constructed. Any community members' questions that were read were responded to with what I can only describe as "spin," including skewing the usual and customary definition of "compatible." Even what appears to be a superior high-rise building cannot realistically be considered to be "fitting in" with its neighbours. There is no way any

reasonable person could contemplate the architect's rendering of the proposed streetscape and call a 13-storey building compatible with the surroundings.

A further impression from the meeting was the enormous credibility gap between Don Zehr's words and actions. It was difficult to maintain a straight face while listening to him describe his sentimental attachment to Belmont Village and his purported great desire to preserve its character, all the while promoting what is undoubtedly a profit-motivated enterprise that will assuredly destroy that very character.

I have never been involved in this kind of event before, and I naively supposed that it would be a somewhat democratic process in which the viewpoint of the community would be listened to, valued, and acted upon. I realize now that once again, just as at the provincial level, it seems to be a foregone conclusion that the developers will have their way. In the case of the province, so-called progress is at the expense of the natural environment, and here, to the detriment of the built environment.

I submitted this question at the meeting, but since we are not to receive responses to in-meeting questions until after the deadline to send in our further thoughts, I'll ask again. In the history of Kitchener, has any development ever been successfully prevented by community action? Or is this entire process simply an exercise in futility?

2. I've been told that I just don't want change, but that is not the case. As I've said before, I realize that an important goal is to help prevent urban sprawl by increasing population density in the core areas. I am fine with high-rises being constructed along Belmont on the south side of Glasgow, where some already exist and where there is no village atmosphere. At the meeting, I heard repeatedly that the official plan designates Belmont as an urban corridor. To me, that description doesn't necessarily mandate high-rises, and I would suggest that if that is the meaning of the plan, then it is flawed, at least with regard to Belmont Village. Once again, I'll say that this area represents a livable, close-knit community gem that should be preserved. And we're not talking about a large area – just the block between Union and Glasgow. In other words, the urban corridor designation should end at Glasgow. Surely the Official Plan could be modified to allow the preservation of such a localized valuable community asset. How would we go about having that happen, not just for Belmont Village, but for other areas that might fall under the same umbrella?

3. I realize that the zoning cannot be changed in time to affect the building at 660 Belmont, but I believe that a height of even 8 stories is far too high for that side of Belmont. I would like to know how the zoning could be changed to match the 4-storey limit on the other side of Belmont. In any case, and hopefully without what I feel is underhandedly redefining words, the 50% higher application should most definitely be turned down on the basis of incompatibility. Please let me know how to have the rest of that side of the street rezoned.

4. I would also like to ask about the provincial requirement to provide additional green space every time the population density is increased. Where will you add green space?

The only area that seems to me to be available is the now-vacant lot at the corner of Union and Belmont. What are the plans for that land? Will another 13-storey building be permitted, and then others be allowed to fill in the remainder of that side of the street to create a "canyon" effect, as is happening on King and Albert in Waterloo? I believe we need areas like Belmont Village as "breathing space" in such a soul-shrinking, dehumanizing landscape.

5. I'd also like an explanation about the ratio of four that seemed to be the underlying rationale governing the height of the building. What is it, how was it established, and why should it be allowed to overrule reasonable considerations of aesthetics that would ensure the preservation of such a civilizing and eminently livable area as Belmont Village?

6. One other smaller point I would like to raise is the parking allowance. Surely, each unit in a high-rise must be allocated at least one space? The numbers cited at the meeting didn't seem to adhere to that concept. To me, it doesn't seem reasonable to assume that there will be enough occupants with no vehicles to compensate for the ones who will have more than one. Commercial units, in particular, along with some residents, would require multiple spaces.

Thank you so much for coordinating all of the organization details, and I look forward to your response.

3. Email March 20, 2021 to Garett Stevenson

I have just come from standing on King Street North between University and Columbia in front of the row of high-rises. I was dismayed to realize that the height of two of the buildings is roughly the equivalent of the 49-metre building proposed for 660 Belmont, and I found it highly disturbing to see the reality in front of me. I know you repeated your previous statements about the design being less wall-like for the Belmont building, but as I, too, kept saying, the design is irrelevant in the face of the height. As a result of our conversation about this issue yesterday, I have managed to distill what I believe is the fundamental problem for me. In addition to the shading concerns, I've now seen in person that the building would block the sky, constituting what I would consider a visual assault. And it would become an integral part of my view, even from Avondale. An entire streetscape of such buildings, which will surely follow, will feel soul-draining and overwhelmingly looming and oppressive, like being at the bottom of a canyon with no way out. And the applied-for height is indeed the depth of the deepest canyon in the Canadian Rockies! The result would be that our unique, friendly, comforting, neighbourhood Belmont Village would look like a street in downtown Toronto and no longer bear any resemblance to a village at all.

When we've discussed the likelihood of this building setting a precedent for the rest of the block, what I've understood you to say is that you review all applications on an individual basis, and that there must be compelling and unique reasons for supporting an exception to the 25 metres. I'd very much appreciate an explanation of what you would deem to be these types of reasons for recommending acceptance of the application for 660 Belmont Ave.

Response to the answer you provided, which quoted the Official Plan: I would add that buildings of such an inappropriate height in this area would constitute visual clutter and obstruction of views in what is otherwise a village atmosphere, and for the people whose gardens would be negatively affected, including the community garden, it would constitute loss of enjoyment of normal use of property. The destruction of the trees along the Iron Horse would be injury or damage to plant life

4. Small group meeting March 16, 2021, at 2:30

Missing from the notes in the Comprehensive Engagement Report:

My question about giving me an example of a 16-storey building (equivalent of 49m with 8-foot ceilings) that would be considered compatible with 2-storey buildings.

Comment from resident on Earl Street about cars driving on the lawns and a motorcycle driving on the sidewalk during summer 2019 construction and that the addition of the 49m building would have that kind of negative effect on traffic.

My comment about seeing the sign on Rexall's door in winter 2020 that it was moving.

Garett Stevenson

Subject: [EXTERNAL] Questions prior to the February 25th meeting

Hello, Juliane and Joanne. Thanks for adding us to tomorrow night's meeting. We have some questions we'd like answers to prior to or at tomorrow night's meeting:

1. At the December 17th meeting and in the follow-up email after the meeting, attendees were promised the full text of questions and answers. This information has yet to be provided despite further requests for it. When will we receive it? And when can we expect to receive the complete text of tomorrow's meeting?
2. As City of Kitchener employees, how can Planning Department staff one-sidedly support the profit goals of developers while ignoring the quality-of-life concerns raised by community members whose taxes pay their salaries?
3. Why are zoning height restrictions still expressed in stories? Surely the original restrictions were based on an expectation of 8-foot ceilings. When these are replaced with 12-foot ceilings, the height of the building is already effectively increased by 50%. When will you revise the zoning restrictions for the entire city by expressing height restrictions in metres rather than stories?
4. The depiction of the proposed building clearly demonstrates the ruinous effect on the Belmont Village streetscape. How can any reasonable person deem it to be compatible with its surroundings?
5. If this application is approved, would it constitute a precedent for the automatic approval of other high-rise development along Belmont Avenue, thus opening the door to replacing the village atmosphere with a concrete canyon?
6. Regarding Belmont Lane East, if it is closed, as would be required for the current design, what is the benefit to the City? Have you established how its closure would affect truck and other supply traffic? Have you examined the effect on parking/stopping on Belmont Avenue, and how it might interrupt the flow of traffic on Belmont?
7. Where would the required additional green space be located, or is the City simply looking for payment from the developer in lieu of green space? If the latter, why is this alternative considered acceptable, given the negative effect on public health and welfare, in contravention of the City's stated mission of developing liveable communities?
8. Why is there not a requirement for at least a one-to-one parking space/unit ratio? Surely the necessity for additional parking that will accompany the increased density on this site will have a negative impact on traffic flow, congestion, noise, and excessive speed, not just on Belmont, but on overflow side streets in the surrounding area.

We look forward to hearing from you.

Many thanks

Subject: RE: [EXTERNAL] Survey about the Feb. 25th meeting

Good afternoon Barb,

Thank you for your email and sharing your concerns.

Participation in our post-engagement survey is completely voluntary. Our goal with collecting socio-demographic data is to ensure that every resident has access to the highest quality services that we can provide – in this case, community engagement. The Ontario Human Rights Code encourages the collection of this kind of data when the purpose is to monitor discrimination and promote equity.

Answers to the survey questions will help us understand who is utilizing our services, and who may be underutilizing the services available to them. We know that sometimes people experience discrimination, due to many different factors, when it comes to service delivery (e.g. age, income, race, language, disability, or gender identity). If we don't ask, then we won't know if discrimination or exclusion is happening, and if we don't know who is utilizing the services, then we cannot develop strategies to correct any existing barriers.

Data is foundational for the creation of equity-informed engagement opportunities that are accessible to all of our citizens – this is our end goal.

Kind regards,
Margaret Love

Subject: [EXTERNAL] Survey about the Feb. 25th meeting

Hello. I've just completed the survey Garrett sent about our response to the February 25th public meeting, and I'd like to provide feedback.

First of all, the survey wouldn't let us select the correct date of the meeting.

Second, I find the demographic questions at the end highly offensive, totally inappropriate, and completely irrelevant to the topic of the Feb. 25th meeting. I was very glad to see the option not to answer any of them. However, I don't believe they have any place in the survey and should definitely be omitted from future ones.

Thank you for reading.

Garett Stevenson

Subject: RE: [EXTERNAL] Questions prior to the February 25th meeting

Hello,

I am following up on your questions regarding the consideration of sale of the laneway. No commitments have been made to sell the lane.

1. Within 3 weeks of the final small resident meeting, a comprehensive engagement report will be prepared that will include responses to all questions received through the Q&A function from both Neighbourhood Information Meetings. The report will include summarize the small groups discussions.

2. City Planning Staff have not taken a position on these applications at this time.

3. The Official Plan and the Zoning By-law both regulate maximum building height by storeys and metres. Currently, the Official Plan permits a maximum building height of 8 storeys (and 25 metres) on lands designated Mixed Use as an Urban Corridor. However, increases in building height, up to 50%, are permitted for mixed-use buildings without an Official Plan Amendment (in this case, 12 storeys and 37.5 metres). The Official Plan Amendment requests to increase the maximum building height to 13 storeys and a height of 49 metres. The current zoning is MIX-2: Mixed Use Two which permits a maximum height of 25 metres and 8 storeys. The Zoning By-law Amendment Application also requests to increase the maximum height to 13 Storeys (49 metres).

4. The City's Official Plan defies compatibility as *land uses and building forms that are mutually tolerant and capable of existing together in harmony within an area without causing unacceptable adverse effects, adverse environmental impacts or adverse impacts. Compatibility or compatible should not be narrowly interpreted to mean "the same as" or even as "being similar to".*

   Adverse impacts may include but will not be limited to: shadows over private amenity areas or on building façades for an unacceptable duration, issues of privacy, overlook conditions, negative microclimatic impacts, light pollution (such as light trespass or glare), odour, vibration, noise pollution urban heat island effects, visual clutter or obstruction of views and/or vistas.

   Adverse Effects, as defined in the Environmental Protection Act, means one or more of: a) impairment of the quality of the natural environment for any use that can be made of it; b) injury or damage to property or plant or animal life; c) harm or material discomfort to any person; d) an adverse effect on the health of any person; e) impairment of the safety of any person; f) rendering any property or plant or animal life unfit for human use; g) loss of enjoyment of normal use of property; and, h) interference with normal conduct of business.

   Adverse Environmental Impacts are changes likely to arise directly or indirectly from development, redevelopment or site alteration within or lands adjacent to a Natural Heritage System feature that result in widespread, long-term, or irreversible degradation of the significant features or impairment of the natural functions of the designated area.

   The City requires studies and plans to demonstrate impacts of a development and compares those results against acceptable standards in the City's Official Plan, Zoning By-law, and Urban Design Manual.

5. Each application is reviewed individually based on the merits of the proposal.

6. If the lane is sold, the City would no longer be responsible to maintain the lane. We have received a revised site plan that shows greater detail of how the loading is proposed to function. I have uploaded that document to the City's Fileshare program. This plan is still under review and has not been approved. https://kitchener.sharefile.com/share/view/s6fc65bd2a4d64df4afc9a1113d4dfbf1

7. Operations staff have identified that in addition to the parkland dedication to be paid an cash in lieu of land dedication, there is a possibility to improve the adjacent section of the Iron Horse Trail and establish a publicly accessible mid-block connection from Belmont Avenue West to the trail over these lands ("The Mews" concept that the developer presented at the meeting).

8. The City's Zoning By-law has geographic specific parking requirements based on established and planned public transportation routes. Generally, the more public and active transportation options available to a community, the less parking is required. For an Urban Corridor such as Belmont Avenue West, the required parking for a mixed-use building in the MIX-2 zone is 0.9 spaces per dwelling unit. The application requests to reduce the parking required to 0.8 spaces per dwelling unit. No reductions are being sought for commercial parking requirements. The Zoning By-law allows commercial and residential visitor parking to be shared for mixed-use buildings.

   Section 42 of the Planning Act gives the City the authority to require parkland dedication as a condition of certain types of development. Local approval authorities, like the City of Kitchener, are responsible for preparing a Parkland Dedication Policy which outlines the criteria for requiring parkland dedication (as land or a cash payment) and to plan future park needs. The current Parks Strategic Plan outlines where parkland is needed and provides strategies for acquiring the needed parks. Recent and future investments in the Iron Horse Trail are also intended to strengthen a key active transportation corridor to connect residents to trails and parks throughout the City. The provision of parkland to support growing communities occurs at both a macro (City-wide scale) through the Parks Strategic Plan and also at a micro scale, through site specific developments, where appropriate and feasible.

Thanks,

Garett

Follow Up Flag: Follow up
Flag Status: Flagged

Hello,

It is a bit confusing because the Zoning By-law and Official Plan deal with height differently. I have copied some of the Official Plan (high level policy document) policies that speak to height as follows: https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_City_of_Kitchener_Official_Plan_2014.pdf#page=190

> Policy 15.D.4.22.
>
> Generally no building will exceed:
> b) 8 storeys or 25 metres in height, whichever is greater at the highest grade elevation, on lands designated Mixed Use as a Urban Corridor on Map 2.
>
> Policy 15.D.4.23.
>
> Notwithstanding Policy 15.D.4.22, the City may consider increases to the permitted building height of up to 50 percent of the permitted building height where a development or redevelopment provides a mixed use building containing residential units. It must be demonstrated that a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied.
>
> The MIX-2 zone in the Zoning By-law has a maximum height of 8 storeys **and** 25 metres. The height limit of 8 storeys and 25 metres are both absolute.
> https://app2.kitchener.ca/appdocs/Zonebylaw2019/PublishedCurrentText/SECTION%208%20-%20Mixed%20Use%20(MIX)%20Zones//Section%208.pdf#page=3
>
> An Official Plan Amendment would not be required for a 12 storey or 37.5 metre tall building.

The zoning by-law (more detailed document with regulations) does not have the "whichever is greater" language so the maximum height is 8 storeys and 25.metres.

In this case, 13 storeys and 49 metres requires both an Official Plan Amendment and Zoning By-law Amendment. As you note, if interior floor heights are taller, the building could be same number of storeys but be taller – which is why the Zoning By-law regulates both the number of storeys and height in metres.

When we consider the appropriateness of up to 50 percent more of the permitted building height, we have to look to the OP Policy direction where it must be "demonstrated that a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied."

The City's Official Plan defies compatibility as *land uses and building forms that are mutually tolerant and capable of existing together in harmony within an area without causing unacceptable adverse effects, adverse*

environmental impacts or adverse impacts. Compatibility or compatible should not be narrowly interpreted to mean "the same as" or even as "being similar to".

Adverse impacts may include but will not be limited to: shadows over private amenity areas or on building façades for an unacceptable duration, issues of privacy, overlook conditions, negative microclimatic impacts, light pollution (such as light trespass or glare), odour, vibration, noise pollution urban heat island effects, visual clutter or obstruction of views and/or vistas.

Adverse Effects, as defined in the Environmental Protection Act, means one or more of: a) impairment of the quality of the natural environment for any use that can be made of it; b) injury or damage to property or plant or animal life; c) harm or material discomfort to any person; d) an adverse effect on the health of any person; e) impairment of the safety of any person; f) rendering any property or plant or animal life unfit for human use; g) loss of enjoyment of normal use of property; and, h) interference with normal conduct of business.

Adverse Environmental Impacts are changes likely to arise directly or indirectly from development, redevelopment or site alteration within or lands adjacent to a Natural Heritage System feature that result in widespread, long-term, or irreversible degradation of the significant features or impairment of the natural functions of the designated area.

Hope this helps clarify.

Thanks,

Garett

Subject: [EXTERNAL] Afterthoughts

Hi, Garett. Thanks for talking with me yesterday. I hope you don't mind if I follow up with this email – I find that, for me, discussions usually lead to afterthoughts. Sorry about the piecemeal process!

I appreciate your further efforts to clarify the restrictions for me, and I'm hoping you won't mind confirming my current understanding! The restrictions say a maximum of 25 metres or 8 storeys, but if I'm understanding correctly, the 25 metres is absolute. With 8-foot ceilings, that would allow 8 storeys. But if the building has a commercial main floor, the ceiling of that floor will be 4 ½ metres, which means that the 25 metres cannot accommodate 8 storeys. The 25 metres therefore takes precedence over the number of storeys. Have I finally got it right?

The second thing I'd like to do is apologize for getting a bit upset yesterday. I had just come from standing on King Street North between University and Columbia in front of the row of high-rises. I was dismayed to realize that the height of two of the buildings is roughly the equivalent of the 49-metre building proposed for 660 Belmont, and I found it highly disturbing to see the reality in front of me. I know you repeated your previous statements about the design being less wall-like for the Belmont building, but as I, too, kept saying, the design is irrelevant in the face of the height. As a result of our conversation about this issue yesterday, I have managed to distill what I believe is the fundamental problem for me. In addition to the shading concerns, I've now seen in person that the building would block the sky, constituting what I would consider a visual assault. And it would become an integral part of my view, even from Avondale. An entire streetscape of such buildings, which will surely follow, will feel soul-draining and overwhelmingly looming and oppressive, like being at the bottom of a canyon with no way out. And the applied-for height is indeed the depth of the deepest canyon in the Canadian Rockies! The result would be that our unique, friendly, comforting, neighbourhood Belmont Village would look like a street in downtown Toronto and no longer bear any resemblance to a village at all.

When we've discussed the likelihood of this building setting a precedent for the rest of the block, what I've understood you to say is that you review all applications on an individual basis, and that there must be compelling and unique reasons for supporting an exception to the 25 metres. I'd very much appreciate an explanation of what you would deem to be these types of reasons for recommending acceptance of the application for 660 Belmont Ave.

My final comment is to say again how much I value your patience and good humour in all of this.

Many thanks

Garett Stevenson

Oh, Garett. Now I'm confused again. When I spoke with you, you indicated that if you had our names, you could look up our mailing addresses and that you would therefore be able to send notifications in the Canada Post mail to anyone who signed up for a small group meeting. Now it seems that we have to give you our physical mailing addresses to get a hard copy delivered.

I'm hoping you can clarify.

Thanks

Hello,

Yes, I will email everyone who provided their email address and mail to everyone within 120 metres (plus anyone else that provided their mailing address through this process).

There will also be a notice in the Record newspaper and the property sign will be updated as well.

Thanks,

Garett

Hi, Garett. Sorry to bother you again, but I realized I have one more piece of information to confirm from our conversation on Friday.

My understanding is that you'll send notification about the Planning Committee meeting one month prior to the meeting. The notification will be sent by both email and Canada Post mail to everyone within 120 metres of the site and also to everyone who participated in the small group meetings. You'll be able to find the correct postal addresses from the data available to you through the City.

Please let me know whether I've understood correctly.

Thanks so much for your ongoing help.

Garett Stevenson

Subject: RE: [EXTERNAL] RE: Afterthoughts

Hello,

The OP policy specifically says that "it must be demonstrated that a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied."

The pedestrian scaled base refers to the design of the building at the street. This is what I was referring to when we talked about using building techniques like a podium – where the tower portion of a building is set back further from a street. This make a more pedestrian scaled building at the street, and that type of design helps to mitigate impacts. We talked about how some of the buildings on University do not have a pedestrian scaled base, which is why some people on the call were talking about the cannon effect along the street.

We use the Urban Design Manual (UDM) to evaluate a development proposal for adverse impacts as outlined in the Official Plan definition of *Compatible*. The UDM outlines the City's standards and guidelines to evaluate those impacts.
https://www.kitchener.ca/en/development-and-construction/urban-design.aspx

Thanks,

Garett

Subject: [EXTERNAL] RE: Afterthoughts

Thanks Garett. This still leaves me wondering what specific features in this particular building would be deemed sufficient to support a height greater than 25 metres. It sounds from what's below that as long as there's commercial use on the first floor, you'll grant the 50% increase, especially given the seeming ability to stretch the limits of the definition of compatible, which even at 25 metres is most certainly not similar to or the same as a 2-storey building.

Sorry to keep bothering you, but I'm still not feeling like I have clear answers to my questions.

Thanks so much for your ongoing patience.

Hello,

It is a bit confusing because the Zoning By-law and Official Plan deal with height differently. I have copied some of the Official Plan (high level policy document) policies that speak to height as follows:

https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_City_of_Kitchener_Official_Plan_2014.pdf#page=190

Policy 15.D.4.22.

Generally no building will exceed:

b) 8 storeys or 25 metres in height, whichever is greater at the highest grade elevation, on lands designated Mixed Use as a Urban Corridor on Map 2.

Policy 15.D.4.23.

Notwithstanding Policy 15.D.4.22, the City may consider increases to the permitted building height of up to 50 percent of the permitted building height where a development or redevelopment provides a mixed use building containing residential units. It must be demonstrated that a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied.

The MIX-2 zone in the Zoning By-law has a maximum height of 8 storeys **and** 25 metres. The height limit of 8 storeys and 25 metres are both absolute.

https://app2.kitchener.ca/appdocs/Zonebylaw2019/PublishedCurrentText/SECTION%208%20-%20Mixed%20Use%20(MIX)%20Zones//Section%208.pdf#page=3

An Official Plan Amendment would not be required for a 12 storey or 37.5 metre tall building.

The zoning by-law (more detailed document with regulations) does not have the "whichever is greater" language so the maximum height is 8 storeys and 25.metres.

In this case, 13 storeys and 49 metres requires both an Official Plan Amendment and Zoning By-law Amendment. As you note, if interior floor heights are taller, the building could be same number of storeys but be taller – which is why the Zoning By-law regulates both the number of storeys and height in metres.

When we consider the appropriateness of up to 50 percent more of the permitted building height, we have to look to the OP Policy direction where it must be "demonstrated that a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied."

The City's Official Plan defies compatibility as *land uses and building forms that are mutually tolerant and capable of existing together in harmony within an area without causing unacceptable adverse effects, adverse environmental impacts or adverse impacts. Compatibility or compatible should not be narrowly interpreted to mean "the same as" or even as "being similar to".*

Adverse impacts may include but will not be limited to: shadows over private amenity areas or on building façades for an unacceptable duration, issues of privacy, overlook conditions, negative microclimatic impacts, light pollution (such as light trespass or glare), odour, vibration, noise pollution urban heat island effects, visual clutter or obstruction of views and/or vistas.

Adverse Effects, as defined in the Environmental Protection Act, means one or more of: a) impairment of the quality of the natural environment for any use that can be made of it; b) injury or damage to property or plant or animal life; c) harm or material discomfort to any person; d) an adverse effect on the health of any person; e) impairment of the safety of any person; f) rendering any property or plant or animal life unfit for human use; g) loss of enjoyment of normal use of property; and, h) interference with normal conduct of business.

Adverse Environmental Impacts are changes likely to arise directly or indirectly from development, redevelopment or site alteration within or lands adjacent to a Natural Heritage System feature that result in widespread, long-term, or irreversible degradation of the significant features or impairment of the natural functions of the designated area.

Hope this helps clarify.

Thanks,

Garett

Subject: [EXTERNAL] Afterthoughts

Hi, Garett. Thanks for talking with me yesterday. I hope you don't mind if I follow up with this email – I find that, for me, discussions usually lead to afterthoughts. Sorry about the piecemeal process!

I appreciate your further efforts to clarify the restrictions for me, and I'm hoping you won't mind confirming my current understanding! The restrictions say a maximum of 25 metres or 8 storeys, but if I'm understanding correctly, the 25 metres is absolute. With 8-foot ceilings, that would allow 8 storeys. But if the building has a commercial main floor, the ceiling of that floor will be 4 1/2 metres, which means that the 25 metres cannot accommodate 8 storeys. The 25 metres therefore takes precedence over the number of storeys. Have I finally got it right?

The second thing I'd like to do is apologize for getting a bit upset yesterday. I had just come from standing on King Street North between University and Columbia in front of the row of high-rises. I was dismayed to realize that the height of two of the buildings is roughly the equivalent of the 49-metre building proposed for 660 Belmont, and I found it highly disturbing to see the reality in front of me. I know you repeated your previous statements about the design being less wall-like for the Belmont building, but as I, too, kept saying, the design is irrelevant in the face of the height. As a result of our conversation about this issue yesterday, I have managed to distill what I believe is the fundamental problem for me. In addition to the shading concerns, I've now seen in person that the building would block the sky, constituting what I would consider a visual assault. And it would become an integral part of my view, even from Avondale. An entire streetscape of such buildings, which will surely follow, will feel soul-draining and overwhelmingly looming and oppressive, like being at the bottom of a canyon with no way out. And the applied-for height is indeed the depth of the deepest canyon in the Canadian Rockies! The result would be that our unique, friendly, comforting, neighbourhood Belmont Village would look like a street in downtown Toronto and no longer bear any resemblance to a village at all.

When we've discussed the likelihood of this building setting a precedent for the rest of the block, what I've understood you to say is that you review all applications on an individual basis, and that there must be compelling and unique reasons for supporting an exception to the 25 metres. I'd very much appreciate an explanation of what you would deem to be these types of reasons for recommending acceptance of the application for 660 Belmont Ave.

My final comment is to say again how much I value your patience and good humour in all of this.

Many thanks

Garett Stevenson

Subject: [EXTERNAL] Comprehensive Engagement Report

Hi, Garret. Thanks so much for sending us the Comprehensive Engagement Report. It certainly represents a lot of work on your part!

As you might expect from me by now :), I have a couple of comments and questions. My initial comment is that I'm not sure about the "comprehensive" part, since I know that not all of my own questions were reported in the small group section. I can't tell whether others were omitted from reports of other sessions. I also sent in questions prior to the second NIM meeting, which I don't believe were included. Possibly others did the same. Have their questions been incorporated, or are the NIM questions only the ones submitted during the actual meetings?

This report also fails to include email submissions. I personally sent in one in September and one in January as requested by Juliane following the December 17th NIM. The content of these emails was most certainly not reflected in the "What We Heard" document, and I think what your responses indicate in the Comprehensive Engagement Report is that they will be included in the staff report rather than being presented in this Report. I would like what I submitted to be shared, at the very least, with the other participants in the small group information meetings, and I would also like to know what other people submitted.

So my questions are as follows:

1. Will you please share the staff report with the community? Will it be posted on the file share site?

2. Will it be available to the public and/or to the participants in the public consultation process prior to the Planning and Strategic Initiatives Committee meeting?

Thanks for your efforts and your ongoing patience (I hope!).

Subject: RE: [EXTERNAL] Process questions

Hello,

Yes, you can still submit comments at any time. The cutoff date will be when the staff report is prepared.

If there are missed comments, they can be submitted directly to the Planning and Strategic Initiatives Committee before a decision is made.

Clerks will post the staff report online with the agenda about a week and a half before the Committee meeting.

Thanks,

Garett

Subject: [EXTERNAL] Process questions

Hi, Garret. Sorry to bother you yet again. I have a couple more questions about the process. I talked to Margaret Johnston yesterday, and she suggested I ask you.

You've indicated that all of the other email submissions that were not included in the Comprehensive Engagement Report would be attached to the Staff Report. What I'd like to know is whether we can still send additional comments, questions, etc., that will also be added to the Staff Report. When is the cut-off for further submissions? What happens if it turns out that the Staff Report is missing previous ones?

My second question is whether the Staff Report will be made available to the public at the time when the meeting of the Planning and Strategic Initiatives Committee is announced. I would imagine that the Staff Report will be quite lengthy and contain planning language that the public is likely to struggle with, so I for one, will need ample time to read and digest the contents prior to the meeting.

I hope your store of patience hasn't run out!

Thanks for your help with this.

Subject: [EXTERNAL] Another addition for the Staff Report

Hi, Garett. Hope you're doing well on this damp day! I thought I'd have one more kick at the can and send another submission for consideration by you and the Planning Department. I'd also like it to be added to the Staff Report.

In the Comprehensive Engagement Report, I noticed that you alluded to what I'll call the "doubling" principle for transitioning from one structural height to another. I'm sure it has a formal name. My understanding of it is that, for example, in this instance, the buildings go from 6-7 metres (2 storeys) in residential Old Westmount, to 12.5 metres (4 storeys) on the west side of Belmont Village, to 25 metres (8 storeys) on the east side of the Village, thus providing a gradual, stepped transition to the relatively higher buildings rather than a radical, abrupt increase in height, as will happen if the 49 metres is approved. I would think that's what the drafters of the Zoning By-law had in mind when they set the maximum limits on the heights for both sides of Belmont.

If you apply this principle, it would help preserve the character of Belmont Village, and that's what most of the objections to this project are about. I know you're operating under a requirement to increase density, but 25 metres would still satisfy that obligation, since it could provide around 100 residential units. That's a considerable increase in density: 10,000 % over no residential units at all, as is currently the case on the Dettmer Tire site. Intensification is a city-wide consideration, and Belmont Village is just one small section of two short blocks in the entire city. Surely you could locate higher buildings elsewhere, such as Belmont on the south side of Glasgow. You must have the leeway to treat Belmont Village as an exception.

And that is the overriding point. It is exceptional -- utterly unique in the city. In fact, in the whole of Waterloo Region, there is nothing else that comes close. It is not only one-of-a-kind – it is also the last of its kind. Once it's destroyed, it can't be replaced. I know it's not a designated heritage site, but that doesn't mean it isn't an important part of our heritage. The Environmental Protection Act includes protection for areas of social and cultural significance, which most certainly describes Belmont Village and its significant role in preserving our historical fabric, not just for the local community, but also for the city as a whole – for the many people in Kitchener-Waterloo and beyond who cherish it as a comforting and beloved destination.

The desire to preserve it is quite evident in the *Urban Design Manual*, which treated upper Belmont (the Village) differently, recommending lower building heights than are now specified in the Zoning By-Law. The Manual also provides photos of examples of what are identified as great streets, with all of the buildings appearing to be 7-8 storeys. I know that you keep saying that the Manual is just a guide, but it is actually mentioned 38 times in the Official Plan, with words such as "adheres to," "conforms to," "in accordance with," "consistent with," "implementation of," and "follow." Here are three examples:

11.C.1.26. The City will ensure that the design of...redevelopment within existing neighbourhoods...adheres to a high standard of neighbourhood design in accordance with the City's *Urban Design Manual*.

15.D.2.31. The City may withhold Site Plan Approval until such time as developments and redevelopments demonstrate adherence to the City's *Urban Design Manual*... Such guidelines could include...preferred building massing.

15.D.4.12. The City may: d) require that buildings maintain a human-scaled form of development along the street by imposing façade and building height regulations in the Zoning By-law and the City's *Urban Design Manual*...

The bottom line is that all of these considerations surely provide you with ample latitude and more than enough justification to permit you to enforce the 25-metre maximum specified in the Zoning By-Law. I implore you to don your livability superhero capes and use your powers to save the village character of Belmont Village.

Thank you for reading.

Subject: [EXTERNAL] Re: City of Kitchener Heritage Districts

Hi, Victoria. As you are already aware, Margaret Johnston has given me your contact information.

I'm afraid there's been a bit of a misunderstanding because I know that not all Old Westmount residents are totally on board with acquiring a formal Heritage Conservation District designation. However, the Westmount Neighbourhood is listed in Kitchener's Cultural Heritage Landscapes report as meeting the qualifications for that category.

I have a few questions:

1. Is Westmount now formally designated a Cultural Heritage Landscape? The Westmount Neighbourhood Cultural Heritage Landscape (CHL) is identified as a significant CHL in the 2014 CHL Study, prepared by The Landplan Collaborative Ltd. and approved by Council in 2015. The CHL Study serves to establish an inventory of CHLs, and the Study identified 55 CHLs across the City. The CHL inventory does not have formal status under the Ontario Heritage, and the Westmount Neighbourhood CHL is not designated under the Ontario Heritage Act. Our conservation plans for the identified CHLs is a two-part process. The first part is complete, with the establishment of an inventory. The next phase involves a re-examination of each of the 55 CHLs to identify measures that should be undertaken to address conservation objectives. Staff's focus to date has been on the CHLs located within the central neighbourhoods within the Secondary Plan areas. Timing to undertake a review of the Westmount area is not known at this time, and will be dependent on staff resourcing and budget.

2. If it is, what are the boundaries of the Westmount Neighbourhood for the purposes of the Cultural Heritage Landscape designation? I have attached to this email an excerpt from the 2014 CHL Study which delineates the boundaries of the Westmount Neighbourhood CHL, as identified in the Study. As part of the re-examination noted above, the boundaries of the CHL may be subject to change. To clarify, the Westmount Neighbourhood CHL is not designated under the Ontario Heritage Act.

3. What, if any, parts of Belmont Village are included? Belmont Village is not included in the current boundaries of the Westmount Neighbourhood CHL.

4. What, if any, are the restrictions with respect to construction, demolition, renovations, development, etc., that accompany a Cultural Heritage Landscape designation? There are currently no CHL-specific policies or guidelines in place within the Westmount Neighbourhood that would restrict new construction, demolition or alterations to existing buildings.

Let me know if I need to clarify any of my questions.

Many thanks in advance for your help!

Hi

Here is the list of City of Kitchener Heritage Districts: Heritage properties and districts - City of Kitchener

The Westmount neighbourhood is not listed there.

I have copied in Victoria Grohn who is our Heritage Planner. Victoria, Barb Trotter lives in the Westmount neighbourhood. She had some questions regarding heritage districts. Back in 2019, Westmount neighbourhood had a plaque unveiling from the Heritage committee noting Westmount being one of the first planned suburbs.

Barb, you have Victoria's contact information to follow up with further questions about what these designations mean and what their implications are.

Thanks!

Kind Regards,

Margaret

Hello Barb,

Transportation staff have reviewed the various reports and based on the projected AM and PM peak times, which are based on the number of units, they do not have concerns. That being said, they are other considerations with respect to height that we have already discussed.

I will touch base with you and the FOBV when we get an update from Zehr Group on a revised proposal.

Thanks,

Garett

Thanks for all of this, Garett. This time, I'm the one taking a while to get back to you!!

I think the only thing I'd like to clarify is that I'm not at all concerned about Trio. What does concern me is why traffic isn't being taken into consideration with the 660 Belmont development, when it seems apparent to me that it will only exacerbate what was already judged a problem 7 years ago and could only have become worse since then. Why is that not a consideration that would preclude increasing the number of units and consequently the traffic issues well beyond what would be associated with the 25 m allowed in the by-law.

Thanks yet again!

Subject: [EXTERNAL] RE: More questions

Hi, Garett. Thanks again for this. I'm likely misunderstanding, and I'm sorry to keep bothering you, but here are my additional questions:

1. Thanks for the report for the Trios buildings. As I understand an am-pm-trips traffic study, it should show the number of outgoing and incoming trips for those periods. While the Trios report is interesting from the perspective of strategies to limit single-passenger vehicle trips, I'm not seeing any statistics about the number of trips at Belmont and Glasgow, which to me is the relevant data. The Trios report is also 7 years out of date. Is the information in the other studies more on point? If so, could I see them as well? And I would also mention that I haven't seen any plans on the part of the Zehr Group to implement the programs mentioned in the study?

I apologize, I looked at my email and I only attached the TDM Plan for Belmont Trio and not the traffic study. Attached now. PDF Page 13 (Report page 5) has the traffic volumes counts for the intersections in the area for the AM and PM Peak hours.

As for TDM implementation, the measures are implemented in different ways. Where possible, we implement through development agreements, on the site plan, and in zoning. For example,

- The City reviews and approves floors plans at the site plan stage that show interior bicycle parking stalls and that becomes part of the registered development agreement, and then through the condominium agreement we require the condominium corporation to maintain those elements,
- Minimum bicycle parking is also regulated in the Zoning By-law,
- The location of the car share space is shown on the site plan,
- The City has provisions in the Zoning By-law for shared parking, etc.

Thanks for providing the am/pm trip information. I've had a quick look, and a number of things bother me. One is that this report is still 7 years out of date, including especially the part that describes lower Belmont as being 4 lanes, which it hasn't been since the bike lanes were added. Even the forecast period is now out of date as well, since it was only up to 2020. I also note that at least some of the trips at the Belmont and Glasgow intersection were already designated as the worst level of service (F), for which I found a definition describing it as meaning that drivers will experience severe congestion, long queues, and significant delays. The vehicle-to-capacity ratio is also greater than 1, which I take to mean that there are more vehicles than the intersection has the capacity to handle. So, given the intervening changes that would only exacerbate those already-unacceptable traffic conditions, what I don't understand is why this study can reasonably be used to arrive at the conclusion that no traffic study would be required for a large influx of residents that the 660 Belmont development will create right at the intersection during what is likely to be beyond 2022? Surely the associated negative effect on neighbouring residential streets should be taken into consideration and acted upon?

This report is 7 years old, but it was current when it was submitted for Belmont Trio application. This report evaluated the impact of Belmont Trio onto existing streets, and yes it was noted that some intersections were performing at LOS F. The City also routinely conducts our own traffic assessments and makes adjustments to increase intersection performances (lengthening a left turn lane, adjusting signal light timing, etc.). This is not under the Planning Divisions responsibility so I will check to see if there is more current information from when the bikes lanes were added.

I also noted that there was to be a survey about vehicle use conducted following occupancy of the Trios buildings. Was this survey conducted, and if so, could you send me the results?

I am waiting to hear back from my colleagues in Transportation and will advise. Thanks. I'll look forward to seeing it.

I understand now that a follow up monitoring report was not submitted. Again I will see what study/work we may have done that is more recent.

2. I noticed this at the NIM, but haven't asked about it. Now that I'm seeing this map again, I'll ask. It looks to me as if the urban corridor edge is right around Glasgow, and therefore shouldn't affect the rest of Belmont Village? I realize that the MTSA covers that area but 660 Belmont Ave is within the 800 m only if you measure as the crow flies rather than taking any of the routes you would have to use to walk it, all of which are 1000 m or more. What am I missing?

In the 2014 Official Plan, 660 Belmont Ave is within the conceptual MTSA (grey hatching). However, the City and Region we have since completed work since then and know that the western boundary of the KW Hospital/Midtown MTSA will be Iron Horse Trail. As such, the Urban Structure Map in the Official Plan will be updated by removing the conceptual circles, and showing the actual boundaries that have been endorsed by Region Council. This map, prepared as part of the Midtown Neighbourhood Planning Reviews, shows the limit of the change to Belmont Village. Thanks for the clarification. I'm assuming that means that the MTSA considerations are irrelevant for all of Belmont Village?

I would not say irrelevant because the updated plans are not yet approved, but the planned direction is to treat Belmont Village as an Urban Corridor.

https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_NPR_Map_2_Urban_Structure.pdf

3. I managed to find Table 5-3 on the City of Kitchener website (I feel quietly proud!), (please reach out if you need something, I can provide a link quite easily - thanks -- I'll do that in the future!) but I don't see anything in it about grocery stores. I did find the retail section, which seems to indicate that fewer spaces would be required if it's classified that way. I can't imagine that I'm reading that correctly since if the entire ground floor were a grocery store, surely more spaces would be required?

A *grocery store / food store* is included in the definition of *retail*. The retail rate applies.

Retail – means the use of a premises where goods and/or materials are displayed, rented, or sold. Retail can include a pharmacy, food store, home improvement store, and convenience retail, but does not include large merchandise retail; building material and decorating supply establishment; garden centre, nursery, and/or landscaping supply; or retail of motor vehicles and major recreation equipment. OK, that clarifies that part.

Regardless, my understanding is that a Vincenzo's-type food store is planned, and as we all know, parking at Vincenzo's is a nightmare. Is it not possible to take that into consideration?

When the parking rates were established for retail, all permitted "retail" uses were considered including food stores. From your perspective, what were the specific issues with Vincenzo's parking? Lack of parking, traffic, parking lot design, all of

that? All of those. My experience there is that you have to be what I call a "vulture" in order to get a parking space -- that is, wait/circle until someone leaves. The spacing feels quite tight, and it is extremely busy.

And it looks as if a restaurant is required to have more spaces if the GFA (which I'm assuming is ground floor area?) exceeds 30% of the total GFA. What if there are multiple restaurants whose total GFA exceeds 30%? Then would you require the greater number of parking spaces?

Yes, we would count the total floor area of all restaurant(s). If that is the case, then if the 3 smaller spaces are all restaurants, the total would be 358 sq. m., and if I'm reading the chart correctly, that means that the minimum rate for Mixed Use would be 7.5 sq. m., so rounded up it would be 48 spaces just for those restaurants, which they're not providing. Of course, they might not all be restaurants, but If you decide that not all of them would be restaurants, then there's no plan B if the use changes to restaurants later on, which doesn't seem reasonable to me. But I'm likely misunderstanding?

The City requires an Occupancy Permit for commercial uses because as you note, things do change over time. An Occupancy Permit is required for a business license. When we review the Occupancy Permit request, we look to see what the updated parking requirement would be for all existing uses plus the proposed use, and how much parking is not already counted towards those existing uses. There has to be enough uncommitted parking for the new use, as required by the zoning, in order to get an Occupancy Permit. So basically, we check that parking is met every time a new user is proposed.

If you want to check out the form, it is online here: https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_2021_Application_for_Zoning_Occupancy_Certificate.pdf

And I guess, again, my main overall question is what is it that is preventing you from making exceptions in order to preserve the character of Belmont Village as a village based on the Official Plan stipulation that the Urban Design Manual be applied as a guide, and at least attempt to mitigate what seems to me to be reasonable expectations of exacerbated parking and traffic problems?

I am not sure I understand this question. There are permissions in place to permit growth already – are you asking why don't we remove those permissions to retain the built form that is there now? Nope. I realize that what is there now is not in line with the Official Plan and the Zoning By-law and might not be the best use of space. Even though I believe that less than 25 m would be more in keeping with the Village atmosphere, what I am asking is why you can't at least enforce the 25 m maximum height according to the zoning by-law, and use your discretion to refuse consideration of the additional 50% or any other increase on the grounds that upper Belmont (the Village) should be treated differently from lower Belmont as stipulated in the Urban Design Manual. As I said, the Official Plan says the Manual should be used as a guide, which you would be doing, and you could interpret the conditions that accompany the 50% clause in such a way as to uphold that perspective.

I think we talked about this a bit this week – I will make a recommendation and that will be outlined in my staff report. Until then, we will continue to see what adjustments can be made to the proposal.

Thanks again for your seemingly unending supply of patience! Let me know if you'd prefer to discuss by phone? Still grateful for the patience and good humour, and also still available by phone. And we'll "see" you tomorrow night?

Always happy to chat and answer your emails, sometimes it just takes a few days as email volume is quite high in our digital world.

Hello,

I hope you are well.

1. The Parking Study and TDM Plan that was completed for 660 Belmont Avenue West discussed observations from proxy sites for comparison, which include 61-65 Highland Crescent, 57 Queen Street North, and 460 Belmont Avenue West (Belmont Trio). I have attached the traffic study that was completed for the Belmont Trio project.
2. Portions of Belmont Village are identified as either within a Major Transit Station Area (MTSAs) or Urban Corridor – as shown on the City's Urban Structure Map. The City's intensification areas include Downtown, MTSAs and nodes and corridors as shown on this map:

https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_OP_Map_2_Urban_Structure.pdf

3. The Zoning By-law requires different parking regulations for mixed-use buildings depending whether or not the ground floor use is a single unit, or if the multiple unit rate applies. And certain uses (screen capture below) require a higher parking rate, or have maximum floor area caps.

If the whole ground floor is a grocery store, we would apply the *Retail* parking rate.

Have a lovely weekend.

Thanks,

Garett

Subject: [EXTERNAL] More questions

Hi, Garett. Hope you're doing well these days and that you have at least your nose above water!!

I'm realizing there are a few more questions I'd appreciate answers for.

1. When I asked about traffic in our small group meeting, what I understood you to say was that no traffic study was required for the 660 Belmont development because the am and pm peak flow information that was extrapolated from other studies was deemed to be sufficient. I would like to know the areas where those studies were conducted, and I would also like to obtain copies of the results. Or am I misunderstanding? If I am, it would be great if you could explain further.
2. In the article in the *Kitchener Citizen*, you were quoted as saying that "Belmont Village is an area targeted for 'intensification.'" However, our understanding is that Belmont Village is not, in fact, one of the six areas targeted for intensification by the Region. I was hoping you could please clarify?
3. Since the Zehr Group certainly seems to be planning to include some kind of grocery outlet on the main floor, I was wondering

whether the fact that a grocery store is included in the commercial space would have an impact on or change the parking requirements for the commercial space? And if not, then why not?

Thanks so much once more for your patience, and I hope you have an enjoyable day off tomorrow!!

Garett Stevenson

Subject: [EXTERNAL] One last thought

Hi, Garett. Hope you're keeping sane these days -- but not enough so that life is boring? :)

Sorry to be bothering you yet again, but I thought I'd take one last kick at the can.

I was thinking about how you said several times that you considered each case individually, and I thought I'd try to express a bit more clearly what I was trying to say at the last meeting you attended.

I wasn't trying to find out what your decision would be. I just thought that the individual characteristics of a project might include its location in an area of outstanding cultural and social significance not just to the local community but also to the City and Region as a whole. Possibly that would be a rationale for keeping the height at 25 m. I guess my bottom line is that villages don't have high-rises.

There! Now I think I'm truly finished -- I'm sure you'll be relieved!

Thanks again for your patience and good humour.

Garett Stevenson

Subject: RE: [EXTERNAL] Belmont Laneway

Hello,

The notice of the statutory meeting (Planning and Strategic Initiatives Committee meeting) and mailout will specifically note that the sale of the laneway is on the agenda to be considered. Any interested person can register as a delegation to speak at that meeting, regarding the lane and/or the applications. Consideration of whether to sell the laneway will be at a public meeting (at the same time as the OPA and ZBA). For more information on how to register as a delegation, please see: https://www.kitchener.ca/en/council-and-city-administration/appear-as-a-delegation.aspx

To clarify, only Kitchener City Council can decide to sell the lane - the Ontario Land Tribunal (OLT) can determine the final outcome of the Official Plan Amendment and Zoning By-law Amendment applications if appealed, but he OLT can not decide on the lane sale.

- If the laneway sale is not approved, the developer will have to redesign their proposal as the current design assume the lane will be sold.
- If the laneway sale is approved, then the lands can be sold consolidated once any conditions of the transaction are completed (every transaction will have conditions – price, timing, easements, etc).

I have not heard from the owner of the Tim Horton's lands.

Thanks,

Garett

Subject: [EXTERNAL] Belmont Laneway

Hi, Garett. Hope you're doing well these days!

I was hoping you could tell me what's happening with Belmont Laneway. I have a number of questions:

1. Have you heard from Tim Hortons, and if so, what was their response?

2. At what point does the public have a say in what happens to publicly owned property?

3. It seems to me that this roadway can't really be considered surplus since it's not abandoned or out of use? How does that work?

4. When will the public even be notified that the sale of the laneway is under consideration?

5. You said that the council will decide on the laneway purchase at the same meeting when they decide on the amendments to the by-law and official plan. What happens to those a) if the laneway purchase is approved and b) if the laneway purchase is not approved. I'd appreciate details about how the process will work. My understanding from what you said previously is that the laneway purchase is the only thing preventing the Zehr Group from going to OLT, what happens if the laneway sale is approved? Will there then be no consideration of the amendments since OLT will then decide?

Thanks so much

Garett Stevenson

Subject: RE: [EXTERNAL] Re: RE: Traffic study for 660 Belmont Avenue development

Hi Barb,

Sorry it's taken me so long to get back to you on this one. I have provided answers to your specific questions below. IF you need further clarification, please let me know.

1. For site specific Transportation Impact assessments, a study is not required if the site generates less than 100 vehicle trips. What you have alluded to is corridor analysis. Corridor analysis is done at a regional scale and takes into account projected growth and development so that the Region/City can better understand future total traffic conditions.
2. The Comparison of Dettmer tire is only peak hour trips, yes.
3. The two projects are comparable in understanding residential trips generated by high rise buildings in the same corridor. The locations/conditions may be different, but the trip analysis is a fair comparison to understand the traffic that would be generated at 660 Belmont Ave
4. Turning movement counts were conducted at 460 Belmont (Trio) in February 2019. That study demonstrated that in the AM and PM peak hours, 0.21 and 0.27 trips were generated per unit respectively. Additional information can be found in the following study that I believe you may have reviewed prior: https://app2.kitchener.ca/AppDocs/OpenData/AMANDADataSets/593437_Parking%20Study%20and%20TDM%20Plan.pdf

Should you have any additional questions or concerns, please let me know.

Subject: [EXTERNAL] Re: RE: Traffic study for 660 Belmont Avenue development

Hi, Barry. I'm sorry it's taken me so long to get back to you with my additional questions.

Here's what I still don't quite understand:

1. Would the 100-added-trip threshold apply to other development projects in adjacent locations? In other words, if the 660 Belmont project is approved, and the expected additional developments along the east side of Belmont were to be proposed, would that mean 100 trips allowed for each of them, for a possible total of 400-500 additional trips, depending on the number of buildings, all without a traffic study?

2. When you're deducting what would have been trips for Dettmer Tires, were they only peak hour trips? I certainly don't have data about this, but my sense is that, except for the staff who worked there, trips to that kind of business would be more likely to be spread more evenly throughout the day?

3. I've checked the address of the comparable study you indicated, and yes, it is the Trio project, which is the one I have the study for from more than 7 years ago. In addition to the factors I've already mentioned that have changed since then, which don't seem to be deemed relevant, I'd like to point out that I wouldn't consider the 2 projects to be exactly comparable:

- Trio is residential -- 660 Belmont has commercial space as well, which means additional visitor and deliveries, especially for the planned grocery store.
- Trio is set back from Belmont and has sufficient parking -- 660 Dettmer has a streetside location and a small surface parking lot that must accommodate visitors and deliveries to both the commercial and residential components of the structure.
- Vehicle access to the building at 660 Belmont will be only a stone's throw from the Belmont/Glasgow intersection, which as I noted, already had identified problems 7 years ago, but which sometimes now has what I would consider describable as grid lock, since traffic is sometimes backed up along Glasgow from Belmont all the way to Westmount. In these kinds of conditions, people use the residential side streets as alternative routes. In the past, when Glasgow has been unavailable, neighbours on Earl Street have observed vehicles driving up over front lawns and motorcycles driving down the sidewalk, in an area with small children. Surely, these conditions can't be deemed acceptable, and an examination of how the new project will impact them should be undertaken.

4. In the Trio report, it mentions that further studies will be conducted following occupancy of the project. This is the second time I'm asking, and I believe Garett has also asked twice before. Could you please address this question and tell me whether such studies have indeed ever been conducted, and if they were, how I can obtain a copy.

Many thanks for your help and your patience.

Subject: RE: Traffic study for 660 Belmont Avenue development

Hi Barb,

Regional standards require that a development generate at least 100 new trips in either the AM or PM peak for the formal requirement of a Transportation Impact Study. Generally a site that generates less than 100 vehicle trips in the peak hour has limited impact on the surrounding street network.

When reviewing transportation impacts, it is important to note that height doesn't generate traffic, but rather the intended use of the site. In this case, traffic studies were collected by a third part at a nearby comparable condo site (460 Belmont Ave – this may be the study that you are referring to related to Trio) to better determine anticipated peak hour traffic volume that could be expected at 660 Belmont Avenue. Through that study, it was determined that that site generated 0.21 and 0.27 vehicle trips per unit during the am and pm peak hours respectively. These rates were then applied to the proposed site (163 units at the time of comparison) and it was determined that 34 and 44 vehicle trips can be expected in the AM and PM peak hours respectively. The next step is to understand current use. The existing site would generate traffic (if still in operation of course), and that needs to be taken into account as well. A typical 5-bay Tire Store (such as Dettmer Tire) would be expected to generate 11 vehicle trips in the AM and 18 trips in the PM. These totals can be subtracted from the anticipated volume to give total NEW traffic anticipated; 23 vehicle trips in the AM peak hour and 26 vehicle trips in the PM peak hour (roughly one new vehicle trip every 2 to 2 and a half minutes). This then gets broken down further by entering/exiting traffic and direction. Assuming even distribution, this site results in one new vehicle trip every 4-5 minutes in the peak hour at the intersection of Belmont and Glasgow. This type of negligible volume increase is anticipated to have minimal if any noticeable impact on the surrounding street network.

All of the above does not begin to take into consideration the improvements to transit and active transportation infrastructure that has also resulted in changing traffic patterns and would also generally be applied in a transportation impact study. Nor does it take into account any traffic signal improvements that were implemented as a result of the changes to Belmont Avenue.

I hope that this provides additional context to staff's position regarding traffic impact related to 660 Belmont, but feel free to contact me should you have additional questions/concerns.

Subject: [EXTERNAL] Traffic study for 660 Belmont Avenue development

Hello, Barry. I've received information from Garett Stevenson with respect to a traffic study for the Belmont and Glasgow intersection, especially in regard to the likely effects of the proposed high-rise development at 660 Belmont Avenue. Here's what he's told me:

"Transportation staff have reviewed the various reports and based on the projected AM and PM peak times, which are based on the number of units, they do not have concerns."

I've also had a look at the traffic study that was completed 7 years ago for the Trio development farther down Belmont toward Highland Road. Here's what I found about Belmont and Glasgow:

"The eastbound through and right-turn movements on Glasgow Street at Belmont Avenue West currently operate at LOS F during the AM peak hour (an increase from LOS E at the 2020 background horizon). The V/C is estimated to exceed 1.0."

When I investigated LOS F and V/C in excess of 1.0, it seems that that intersection was already exhibiting the worst level of service (F), for which I found a definition describing it as meaning that drivers will experience severe congestion, long queues, and significant delays. I also found that a vehicle-to-capacity ratio greater than 1 would mean that there are more vehicles than the intersection has the capacity to handle. As a lay person, I do recognize that I might be misinterpreting this information, and I'd be glad of clarification.

This report was produced before Belmont Avenue was narrowed to allow the bike lanes and before the Catalyst137 complex was in operation. Recently there has also been a further increase in traffic on Glasgow because of the massive construction at King and Wellington. Even when the construction has been completed, there will be substantial number of occupants who will use Glasgow for egress from and access to that site.

I also noted that there was to be a survey about vehicle use conducted following occupancy of the Trio buildings. When I asked Garett about this additional survey, he said he had inquired with your department about it but on 2 subsequent occasions he hadn't heard back about any more recent studies.

Given the intervening changes which would only exacerbate what I take to have been deemed already-unacceptable traffic conditions 7 years ago, what I don't understand is why this study can reasonably be used to arrive at the conclusion that no further traffic study would be required for a large influx of residents that the 660 Belmont development will create right at a problematic intersection? Surely the associated negative effect on both the main-street intersection and the neighbouring residential streets should be taken into consideration and acted upon? In particular, why would traffic not be a consideration that would preclude increasing the number of units and consequently the traffic issues well beyond what would be associated with the 25 m maximum height specified in the by-law.

I'm hoping you'll be able to address my confusion by shedding some light on this matter. I would very much appreciate your assistance. Let me know if you have questions.

Many thanks

Garett Stevenson

Subject: [EXTERNAL] Response to revised application for 660 Belmont Ave. W. (copied to the Mayor and City Council)

Hi, Garett. Hope you're doing well these days.

I wanted to touch base with you in regard to the revised plans for 660 Belmont Ave. W., and especially the versions of the changes recently reported in the *Record* – initially on November 6, 2021, with further comments this week as a result of some community members' attempts to correct the one-sided slant of the November 6th article. To say that I'm dismayed by the interpretations of both sides of the controversy doesn't begin to express how I feel. I would also point out that many of the quotes ascribed to me in the articles were either misquoted or inaccurately attributed to me and that many of the crucial points we made during the interview, some of which are indicated below, were omitted altogether.

As has been mentioned in the *Record* at least three times now, the Zehr Group is claiming to have addressed the concerns of the residents – which is patently and egregiously a misleading overstatement. Instead, I found the long-awaited revisions enormously disappointing.

1. In the first place, in spite of numerous conversations with you about the requirement for a project to meet the height stipulations in both storeys AND metres, only storeys are mentioned. In itself this is still misleading, since the original 13 storeys included the mechanical rooftop as a storey, whereas the 11 storeys does not, and also fails to account for ceilings that are higher than 8 feet. I understand that from your perspective the amenities that were previously to be included on the 13th floor meant that it was considered in the number of storeys, whereas those amenities are missing from the 12th storey of the current plan. However, the effect on the overall height of the building is the same, so calling them 13 and 11 storeys is like comparing apples and oranges. The effective drop is all of one storey.

2. In metres, the total height of the building appears to have gone from 48.4 metres to 43.7 – a reduction of only 4.7 metres, or just under 10%, which doesn't come close to the 25 metres or just over 48% reduction we'd like to see so that it meets the maximum height specified in the by-law. If I've understood previous conversations correctly, one principle is that the impact of height is reduced by setbacks and stepbacks. It also appears from my non-expert interpretation of the new plans that both the setback and the stepback have been reduced, thus increasing the looming streetside presence of the structure. In my view, the revised building is still massively (pun intended!) unacceptable.

3. In the editorial this week, it was suggested that the community should collaborate with the developer to come up with a solution. As you already know, we did meet with the developer and our offer to work together was met with a flat-out refusal.

4. With respect to sustainability, the majority of the features listed in the letter submitted by the developer are phrased in non-committal terms such as "It is our intention…," "…will contribute to promote sustainable development…," "provisions may be provided," "may be designed," "will

consider," "will assess feasibility," "we will strive to," and "wherever possible." Hardly confidence-inspiring promises. Many of the ones that are expressed in definite terms, while laudable, are features that are commonly incorporated in most new builds in any case.

5. And the contribution to Menno Homes is again very laudable, and something the City should consider requiring from all developers. However, in relative terms, I've discovered that that amount will cover either not quite the total cost of one affordable unit, or serve as a basis for funding the construction of 4-6 units. The overwhelming City housing need is for affordable rental housing rather than luxury condos.

6. And then there's the laneway. It is my understanding that land that is to be declared surplus by the City is usually abandoned or is such a small sliver that it would not be of use for any purpose. Belmont Lane East falls into neither of those categories. Indeed, the only reason I can see for allowing it to be declared surplus is to increase the amount of profit that ends up in the developer's pocket. Like permitting the height of the building to far exceed 25 metres, this decision will also set a dangerous precedent. The possibilities of increasing green space to meet the physical and mental health needs of the rapidly expanding downtown core population are severely limited. Numerous studies have shown that these health needs are exponentially greater for residents of high-rises. Developers are able to buy their way out of their obligation to meet the requirement to provide green space with their projects, meaning that the City must purchase other land with that money. Given this scenario, for the City to relinquish ownership of ANY land in this area seems shortsighted to me. And surely the motivation should never be the financial benefit of one single entity rather than the overall good of the community.

7. And my final point is that opposition to the 660 Belmont proposal is repeatedly painted as resistance to change, a wish to live in the past, and a lack of desire to support the preservation of farmland and green space. Nothing could be farther from the truth, as I trust you know from previous conversations. Constructing 25-metre buildings most certainly represents substantial residential intensification. The points that everyone seems to be missing are the unique quality-of-life and economic tourist-magnet benefits that Belmont Village provides for the entire City and Region. Yes, we are inexorably becoming a big city, but the greater the number of overwhelming high-rises that pepper our urban landscape, the more our psyches need our municipal caretakers to preserve human-scale oases to nourish our souls as an antidote to the arrival of the monoliths.

Thanks for reading. I'd appreciate it if my points were added to the staff report. Is this still possible?

Many thanks for your still (I hope) ongoing patience.

Garett Stevenson

Subject: RE: [EXTERNAL] Re: 660 Belmont Avenue West - Small Group Meetings

Hello,

The Official Plan and the Zoning By-law both regulate maximum building height by storeys and metres. Currently, the Official Plan permits a maximum building height of 8 storeys (and 25 metres) on lands designated Mixed Use as an Urban Corridor. However, increases in building height, up to 50%, are permitted for mixed-use buildings without an Official Plan Amendment (in this case, 12 storeys and 37.5 metres). The Official Plan Amendment requests to increase the maximum building height to 13 storeys and a height of 49 metres.

The current zoning is MIX-2: Mixed Use Two which permits a maximum height of 25 metres and 8 storeys. The Zoning By-law Amendment Application also requests to increase the maximum height to 13 Storeys (49 metres).

Mixed Use (MU) Corridor zones were applied to the entire Belmont Mixed Use Corridor in early 2012. All properties in the corridor were zoned as either Low Intensity Mixed Use Corridor (MU-1) or Medium Intensity Mixed Use Corridor (MU-2). No parcels were changed to High Intensity Mixed Use Corridor (MU-3). In assigning the Mixed Use Corridor zone categories staff had regard for the Official Plan designation for Mixed Use Corridors which emphasizes the importance of achieving a built form that is compatible with surrounding residential neighbourhoods. Generally, the MU-1 zone was applied in areas that abut low rise residential development. The MU-2 zone is proposed where development could be adequately separated from low rise residential development (along the east side of Belmont Avenue or larger development sites) or to recognize existing conditions (existing apartment buildings). The new MIX zones that were applied recently as part of the City's new Zoning By-law essentially brought forward similar permissions as the MU zones.

Thanks,

Garett

Subject: [EXTERNAL] Re: 660 Belmont Avenue West - Small Group Meetings

Garrett,

Thanks so much for the email. It must be a great challenge trying to do this during a pandemic!

Firstly, I am *totally* in support of this development. What a perfect place for folks who don't want to drive (cycling!). Although I resent you taking away my handy mechanic :).

My only question is around the height. Let me ask here and you can let me know if I need to attend the small group meet (I'd rather not; busy busy).

Please confirm this planning stuff (my planning background is weak).

Height requirements aren't in the Official Plan, but probably in Zoning? Or neighbourhoods? OP would be too broad.

So how were the height requirements in each area decided? By broad public consultation, etc.? It appears to me that most infill developments appear to ask for 10 or 15 stories higher than allowed, and then the City negotiates down to something less than that, but still higher than allowed. This obviously increases the developer's profit. If I have this correctly, my question is, why do we bother setting height restrictions, if we can't enforce them? The process is my concern, not this particular site. It seems to me that if we are willing to increase his profit, he should be willing to provide some low income units...

I may not understand this completely, kindly elucidate. Thanks Garrett!

On Wednesday, March 3, 2021, 03:22:08 p.m. EST, Garett Stevenson <garett.stevenson@kitchener.ca> wrote:

Hello,

As mentioned during the Neighbourhood Information Meeting last Thursday, I am going to be facilitating small group discussions regarding the development applications for 660 Belmont Avenue West.

We acknowledge that the large scale digital meetings clearly have had some unintended consequences that we want to opportunity to address. While large scale meetings like the two already held in December and last week are efficient in sharing information, we know they need to be supplemented with opportunities for two way dialogue between City staff and yourselves.

I am reaching out today to invite you to RSVP for one of the small group sessions. I kindly ask that you identify your top 3 preferred timeslots. These meetings will have a maximum attendance of 15 people each to ensure that everyone will have an opportunity to speak and share their perspectives and ask questions. Additional meetings may be scheduled to accommodate everyone's availability if the 10 scheduled sessions below fill up, or if you cannot attend at these times.

To register, I kindly ask that you respond to me by email with the following information:

1. **Please select up to three sessions that you are available to attend.**

Session	Date	Time
Session 1	March 16	1:00pm - 2:00pm
Session 2	March 16	2:30pm - 3:30pm
Session 3	March 16	6:30pm - 7:30pm
Session 4	March 17	9:30am - 10:30am
Session 5	March 17	12:00pm - 1:00pm
Session 6	March 18	12:30pm - 1:30pm
Session 7	March 18	2:00pm - 3:00pm
Session 8	March 18	6:30pm - 7:30pm
Session 9	March 19	8:00am - 9:00am
Session 10	March 19	3:30pm – 4:30pm

2. Please identify the main topics you would like to discuss during the meeting.

3. Please confirm how many people will be attending with you.

I commit to:

- Confirm which session you have been scheduled for within 3 business days of receiving your request.
- Provide the Zoom link for your session the day before it is scheduled.
- Prepare a consultation report within 3 weeks of the last small group discussion that will include a summary of our discussions, as well as answers to the questions from the Q&A chat function during the two meetings.

I look forward to virtually meeting with you all in a few weeks. In the meantime, the City's consultation website has been updated with additional information from our meeting last week. For more information, please see www.kitchener.ca/planningapplications.

Thanks,

Garett

Subject: RE: [EXTERNAL] Request for information regarding 660 Belmont Avenue West

Hi

Thanks for your email. I have tried to respond in the order of your questions as follows:

1. Circulation distance. The Planning Act requires that notice be provided to properties located within 120 metres of a development application and the City has followed this practice for this application. As part of the City's recent Development Services Review which included a review of opportunities to improve our public engagement practices, the City is exploring opportunities to expand the circulation radius for notice of development applications in order to provide more broad notice of future development proposals. A large neighbourhood notice sign was installed on site for passers-by to be made aware of the applications and there will be a newspaper notice when the statutory public meeting is scheduled. The date of the meeting will also be posted on the sign. In addition to statutory requirements, the City also provides current information on the City's Planning Application webpage. Councillor Johnston shares updates on her social media and in publications (Kitchener Citizen column, etc). Planning staff also provide information to interested media representatives and have conducted interviews for these applications.

2. The Official Plan and the Zoning By-law both regulate maximum building height by storeys and metres.

   Currently, the **Official Plan** permits a maximum building height of 8 storeys and 25 metres, whichever is greater, on lands designated Mixed Use as an Urban Corridor. However, increases in building height, up to 50%, are permitted for mixed-use buildings without an Official Plan Amendment (in this case, 12 storeys or 37.5 metres). The applicant's Official Plan Amendment requests to increase the maximum building height to 13 storeys and a height of 49 metres.

   Official Plan policy 15.D.4.23 allows the City to consider increases to the permitted building height of up to 50 percent of the permitted building height where a development or redevelopment provides a mixed use building containing residential units. It must be demonstrated that a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied. A Zoning By-law Amendment application is still required to increase the building height.

   The current **zoning** is MIX-2: Mixed Use Two which permits a maximum height of 25 metres and 8 storeys. The applicant's Zoning By-law Amendment Application requests to increase the maximum height to 13 Storeys (49 metres).

3. Traffic study. The Applicant submitted a Parking Study and Transportation Demand Management (TDM) Plan was dated July 2020, however the data was collected earlier. There were two types of data collected by the consultant. On-street parking which was collected on March 5 & 7, 2020 and development traffic which was collected in Kitchener in 2017 to 2019. A traffic study was not required.

4. Planning staff review every application based on its own merit. The overall development proposal will be considered including aspects such as additional height, and any future application would be subject to the same review. Planning policies, zoning regulations, and design guidelines apply to all development applications.

We have a new map-based consultation webpage at www.kitchener.ca/PlanningApplications that has all the information for an application all in one place. For the 660 Belmont application, there is a Comprehensive Engagement Report that summarizes the discussions of the 12 meetings as well as answers to questions asked. I know that Councilor Johnston also provides updates on this application in her Kitchener Citizen newspaper column and through social media.

Please let me know if you have any other questions or feedback to share with us.

Regards,

Janine Oosterveld, MCIP RPP

Subject: [EXTERNAL] Request for information regarding 660 Belmont Avenue West

Hello Janine, I hope you and your family are safe and hanging in there.

I only recently found out about the development at 660 Belmont, from neighbours. I just joined Friends of Belmont Village. I haven't taken the time to review the file in detail, so I may not have my facts precisely correct, but I do have a couple of process questions. I asked Garett a while ago (see below), but I didn't understand his answer (I'm not a planner), and I didn't have time to follow up with him, so I'll ask again a different way :).

Thank you so much.

1. I understand that the distribution of notices about this project extended by a radius of 110m. I presume this is a Planning Act stipulation. Is this requirement the *minimum* required, or are you only allowed to distribute 110m? It would seem to me that a decision of this magnitude (not to build according to existing rules, but to ask to be able to exceed them), would suggest a need to look further. I live half a block down on Glasgow, and only heard about this recently. Since the whole Belmont Village community will be affected, as well as Iron Horse Trail users (shadows), I wonder why City Planning staff would not decide to extend the notification area? In order to consult the public that will actually be affected (me, for example).

   When we do public consultation on engineering projects, we consider the group likely to be impacted, and decide on distribution based on that. Our EA requirements do not specify a "distance". Sometimes I choose a wide distribution area, and sometimes a modest one. Depends on my interpretation of the likely interest.

2. I understand that the Official Plan and the Zoning allow a height of 8m. I know that these documents are developed based on extensive consultation, and I presume it has been concluded that 8m is a good maximum height for Belmont Village.

Under what circumstances would the City decide to allow a developer to exceed carefully prepared and vetted City planning rules? Since it appears that the requested increase in height will negatively affect the surrounding area (well beyond 110 m), including the Iron Horse, what is the City's reason for permitting it?

Garett said, *"The MU-2 zone is proposed where development could be adequately separated from low rise residential development (along the east side of Belmont Avenue or larger development sites) or to recognize existing conditions (existing apartment buildings)".* There are no apartment buildings in Belmont Village: the buildings on on the other side of the Iron Horse are absolutely not part of Belmont Village. The highest building in Belmont Village now is 3 stories. So is the MU-2 Zoning is being proposed, or does it exist now? Or is this decided on a case by case basis?

Is there some kind of simple table that summarizes the existing OP designation, and part of Zoning that is fixed and the part that is interpretive, and what requests are being made by the developer to change? I was going to do one up myself to try to understand this, but I have a busy day job. It would help residents to clearly and simple understand what is proposed.

3. Has a traffic study been done?

My concern around question 2 is that if you allow this development to exceed allowable height requirements, then the next guys will do the same, and soon we have a tower jungle instead of Belmont Village. Are we sure Kitchener residents would be in favour of that? It seems to me they wouldn't be. I am certainly not.

I am thrilled to have infill development so we can get away from cars and spend less money on infrastructure in green field developments. At the price point these condos will be sold, are we expecting no car or one car families? I presume developers/planners have data to support that condos at this price point don't need as much parking? We obviously aren't allowing a reduction in parking spaces just hoping they won't be needed. I am a big fan of reducing parking requirements where it makes sense. Just so long as we are making data-driven decisions.

Just a friendly reminder to City staff - residents are very busy. I don't have time to comb the papers or look up Council Agendas every second week and study the Planning Act. I have a pretty good baseline knowledge of this stuff and it's not clear to me what is being asked of Council. The City has recently started a weekly newsletter. Perhaps items like this could just be included in there, so folks can stay informed. I presume residents do not have to be in the 110m radius to comment?

Thanks Janine.

Hello,

The Official Plan and the Zoning By-law both regulate maximum building height by storeys and metres. Currently, the Official Plan permits a maximum building height of 8 storeys (and 25 metres) on lands designated Mixed Use as an Urban Corridor. However, increases in building height, up to 50%, are permitted for mixed-use buildings without an Official Plan Amendment (in this case, 12 storeys and 37.5 metres). The Official Plan Amendment requests to increase the maximum building height to 13 storeys and a height of 49 metres.

The current zoning is MIX-2: Mixed Use Two which permits a maximum height of 25 metres and 8 storeys. The Zoning By-law Amendment Application also requests to increase the maximum height to 13 Storeys (49 metres).

Mixed Use (MU) Corridor zones were applied to the entire Belmont Mixed Use Corridor in early 2012. All properties in the corridor were zoned as either Low Intensity Mixed Use Corridor (MU-1) or Medium Intensity Mixed Use Corridor (MU-2). No parcels were changed to High Intensity Mixed Use Corridor (MU-3). In assigning the Mixed Use Corridor zone categories staff had regard for the Official Plan designation for Mixed Use Corridors which emphasizes the importance of achieving a built form that is compatible with surrounding residential neighbourhoods. Generally, the MU-1 zone was applied in areas that abut low rise residential development. The MU-2 zone is proposed where development could be adequately separated from low rise residential development (along the east side of Belmont Avenue or larger development sites) or to recognize existing conditions (existing apartment buildings). The new MIX zones that were applied recently as part of the City's new Zoning By-law essentially brought forward similar permissions as the MU zones.

Thanks,

Garett

Subject: [EXTERNAL] Re: 660 Belmont Avenue West - Small Group Meetings

Garrett,

Thanks so much for the email. It must be a great challenge trying to do this during a pandemic!

Firstly, I am *totally* in support of this development. What a perfect place for folks who don't want to drive (cycling!). Although I resent you taking away my handy mechanic :).

My only question is around the height. Let me ask here and you can let me know if I need to attend the small group meet (I'd rather not; busy busy).

Please confirm this planning stuff (my planning background is weak).

Height requirements aren't in the Official Plan, but probably in Zoning? Or neighbourhoods? OP would be too broad.

So how were the height requirements in each area decided? By broad public consultation, etc.? It appears to me that most infill developments appear to ask for 10 or 15 stories higher than allowed, and then the City negotiates down to something less than that, but still higher than allowed. This obviously increases the developer's profit. If I have this correctly, my question is, why do we bother setting height restrictions, if we can't enforce them? The process is my concern, not this particular site. It seems to me that if we are willing to increase his profit, he should be willing to provide some low income units...

I may not understand this completely, kindly elucidate. Thanks Garrett!

Hello,

As mentioned during the Neighbourhood Information Meeting last Thursday, I am going to be facilitating small group discussions regarding the development applications for 660 Belmont Avenue West.

We acknowledge that the large scale digital meetings clearly have had some unintended consequences that we want to opportunity to address. While large scale meetings like the two already held in December and last week are efficient in sharing information, we know they need to be supplemented with opportunities for two way dialogue between City staff and yourselves.

I am reaching out today to invite you to RSVP for one of the small group sessions. I kindly ask that you identify your top 3 preferred timeslots. These meetings will have a maximum attendance of 15 people each to ensure that everyone will have an opportunity to speak and share their perspectives and ask questions. Additional meetings may be scheduled to accommodate everyone's availability if the 10 scheduled sessions below fill up, or if you cannot attend at these times.

To register, I kindly ask that you respond to me by email with the following information:

1. **Please select up to three sessions that you are available to attend.**

Session	Date	Time
Session 1	March 16	1:00pm - 2:00pm
Session 2	March 16	2:30pm - 3:30pm
Session 3	March 16	6:30pm - 7:30pm
Session 4	March 17	9:30am - 10:30am
Session 5	March 17	12:00pm - 1:00pm
Session 6	March 18	12:30pm - 1:30pm
Session 7	March 18	2:00pm - 3:00pm
Session 8	March 18	6:30pm - 7:30pm
Session 9	March 19	8:00am - 9:00am
Session 10	March 19	3:30pm – 4:30pm

2. Please identify the main topics you would like to discuss during the meeting.

3. Please confirm how many people will be attending with you.

I commit to:

- Confirm which session you have been scheduled for within 3 business days of receiving your request.
- Provide the Zoom link for your session the day before it is scheduled.
- Prepare a consultation report within 3 weeks of the last small group discussion that will include a summary of our discussions, as well as answers to the questions from the Q&A chat function during the two meetings.

I look forward to virtually meeting with you all in a few weeks. In the meantime, the City's consultation website has been updated with additional information from our meeting last week. For more information, please see www.kitchener.ca/planningapplications.

Thanks,

Garett

Subject: [EXTERNAL] Zoning at 660 Belmont

Janine,

Further to my earlier email, I've been wondering about the following.

I think I understand that the current Zoning is MU-2.

Belmont Village would otherwise be absolutely be MU-1. However, a decision was made to include the apartment tower on Mt. Hope as part of Belmont Village. This is a puzzling decision to me. Belmont Village is:

- Almost exclusively retail (a few apts.): not residential at all
- No higher than 3 stories, most shorter

- Contiguous - there are no "breaks" or gaps between buildings/parking
- On Belmont Avenue between Glasgow and Union (except one business on Rock immediately adjacent to Belmont).

The tower does not have any of these characteristics. I doubt one person in 100 in Kitchener would consider this tower as part of Belmont Village. The decision to include the tower, thus kicking the zoning up to MU-2, was essentially a decision to allow towers in Belmont Village.

Can you advise if the Zoning has always been MU-2, or has it changed in recent memory? If so, when?

By the way, I joined FOBV, but am not participating particularly. The questions are probably obviously my own.

Thank you Janine.

*Debbie, I'm sorry, I should have included you in my email yesterday.

Subject: [EXTERNAL] Re: Re: Zoning at 660 Belmont

Thanks Janine.

Would you kindly direct me to the staff report wherein the rationale and recommendation was made to designate Belmont Village as MU-2, along with the associated By-law that was passed in support of it? That will provide the explanation as to the thinking and rationale that went into it the Council decision to build towers in the Village. That will also confirm what public consultation was associated with the recommendation and decision.

I tried to find these online (Kitchener's website has improved remarkably in the past few years!), but wasn't able to locate them.

Thanks so much.

Hi

I have provided a link to the KW Hospital Secondary Plan (current plan) which includes the lands I think you are referring to (the apartment building on Mt. Hope Street). Those lands are shown coloured orange, and are designated as High Density Multiple Residential. This land use designation still applies as updates to that secondary plan (the new KW Hospital / Midtown Secondary Plan which is part of the Neighbourhood Planning Reviews project) has not been approved yet. However, the draft land use designation in the new secondary plan for the Mr. Hope apartment buildings is also High Rise Residential.

The zoning for Belmont Village changed in 2012 when the Mixed Use Corridor Zoning was applied. The City changed the zoning of the all the Mixed Use Corridors across the City. The 2012 zoning amendments only applied new zoning to the Belmont Mixed Use Corridor – there was not an associated Official Plan amendment as no land use designations were changed (i.e. did not change the boundary of the Belmont Mixed Use corridor). The apartment building on Mount Hope is not part of the Mixed Use Corridor.

Portions of the Belmont Mixed Use Corridor are identified as part of the Major Transit Station Area (MTSA) which is a shown as a conceptual 800 metre circle in the City's Urban Structure in the 2014 Official Plan. However, please reference the station area planning processes completed since the 2014 Official Plan which further delineate the MTSA boundary, which shows Belmont Avenue as an Urban Corridor and not a MTSA in the draft Urban Structure proposed as part of the Neighbourhood Planning Reviews.

The Region has recently reviewed MTSA boundaries, and in this case also identifies the Iron Horse Trail as the MTSA boundary.

I hope that helps to clarify given all the various proposed changes to the planning framework. Please let me know if you have any other questions.

Regards,

Janine Oosterveld, MCIP RPP

Subject: [EXTERNAL] Re: Zoning at 660 Belmont

Thank you Janine.

What specifically was the trigger that occasioned the inclusion of the apartment building on Mt. Hope into the Belmont Village area in 2012? Things don't change in an OP without a reason.

Given the significance of the inclusion of this tower, was it highlighted in the draft OP public consultation? City Planners would want to make sure the public were well aware of such a proposal I would think. Was this change highlighted in presentations to Council?

I was Director of Engineering at the time and reviewed the OP; I don't recall anything about Belmont Village being redefined.

So to clarify, my understanding is this:

- The definition of Belmont Village was changed in 2012
- This re-definition will completely change the character of Belmont Village
- The public at large do not appear to be aware of this, and the local community certainly was not until recently (the community around Belmont Village that just mobilized would have mobilized in 2012 if they had been aware, I should think).

I had a quick look at the 2014 OP (I'm really trying to stay out of the weeds on this), and Belmont Village falls within the Major Transit Station Area, but when I read the description of what this means I would conclude that the existing, stable neighbourhood of Belmont Village would be protected. There were a lot of exercises planning development around LRT stations (PARTS), but I don't recall Belmont Village ever coming up in these exercises.

Kindly confirm that I have understood correctly, thank you.

Major Transit Station Area

3.C.2.16. Major Transit Station Areas are designated in the Regional Official Plan, are ide on Map 2 and are a conceptual representation of the area of a ten minute v radius centered around the location of *Rapid Transit* Station Stops.

3.C.2.17. The *planned function* of Major Transit Station Areas, in order to support tran *rapid transit,* is to:

a) provide a focus for accommodating growth through development to s existing and planned transit and *rapid transit* service levels;

b) provide connectivity of various modes of transportation to the transit syst

c) achieve a mix of residential, office (including *major office*), institutional (in *major institutional*) and commercial development (including *retail com centres*), wherever appropriate; and,

d) have streetscapes and a *built form* that is pedestrian-friendly and oriented.

Notwithstanding a) through d) above, Major Transit Station Areas may include within stable residential neighbourhoods which are not the primary foc *intensification*. The *planned function* of these areas will be reviewed and cor through the course of future Station Area Planning exercises.

Kindly confirm that I have understood correctly, thank you.

Subject: 660 Belmont Ave W

Good morning, Barbara,

I have received follow up from our transportation team to assist in responding to your questions:

- Transportation didn't identify the need for a traffic study in 2012, but rather that the proposed intensification of the entire corridor presents potential traffic-related parking and traffic infiltration. At that time, Transportation staff were referring to intensification of the entire Belmont Ave corridor.
- 660 Belmont Ave is one specific element within the entire corridor. In staff's analysis of this particular site, they took into account the existing approved use and compared with what is proposed. In going through that transportation analysis exercise, staff determined that the proposed site would not generate enough traffic and certainly not enough "new" traffic to warrant a full scale transportation impact study. In order to access potential parking infiltration concerns, parking studies were conducted.
- Consistent with 2012, one of the objectives of the Mixed Use Corridor land use designation and zoning is to achieve a transit and active transportation supportive urban form. This means a change in the type of uses (away from auto-oriented uses that generate high volumes of traffic) to uses that are more conducive to pedestrians and transit users. There have been vast improvements in both transit and active transportation that were not fully contemplated in 2012 and therefore it is even more probable that trips generated within the corridor will be shorter trips and vehicle use will be that much more limited.
- In summary, staff's approach to analysis of 660 Belmont is consistent with comments from 2012. However, the transportation landscape has changed substantially since that time and is much more conducive to supporting new development while limiting the overall impacting to adjacent residential neighbourhoods.

The Parking Study and Transportation Demand Management Plan document are attached to the application information at www.kitchener.ca/PlanningApplications

Please let me know if you have any other questions.

Sincerely,

Janine Oosterveld, MCIP RPP

Subject: [EXTERNAL] Traffic Study for 880 Belmont

Janine,

You have mentioned several times that a traffic study was not required. Kitchener Transportation department, in their comments on the 2012 staff report, mentioned that they had concerns about traffic.

I also have concerns about traffic. I don't know what population you expect but you could calculate it using book values for condos (2.2 pph?). At least one car per condo, plus all of the food deliveries, Amazon deliveries, contractors, painters, plumbers, all the usual folks who go into homes. Then the owners visitors. Remember, nobody lives there now. And after the first condo, more are coming.

Would you kindly advise what has taken place between 2012 and now that has obviated the need for a traffic study?

Is it that a Zone Change Amendment process cannot require a traffic study? Also a Zone Change Amendment process looks at one site at a time, rather than areas as a whole. So, even if a traffic study were done it would only look at traffic from the first condo. This is surely an Official Plan decision.

Kindly confirm what has been done to satisfy the concerns of the traffic folks as expressed in the appendices of the report. Counting existing cars twice (which I think is what was done) does not appear to me to be an adequate means of assessing the traffic impacts for this development.

Kindly provide whatever study, assessment, calculations, etc. that were done to assess traffic impacts, and confirm why a traffic study was not done.

Thank you.

Hi

As you may recall, City staff do not stamp/seal professional opinion for staff reports to Council. Your request for public documents following the 2012 report should be submitted through a Freedom of information request that specifies what information you are seeking so that the appropriate division can conduct a records search. Since 2012, the transportation network has changed with LRT now in operation. It will be helpful for you to clarify the information you are seeking through the formal request.

I have copied Kathleen Standring, Access and Privacy specialist in the event you have questions about submitting a formal request.

Sincerely,

Janine Oosterveld, MCIP RPP

- Transportation didn't identify the need for a traffic study in 2012, but rather that the proposed intensification of the entire corridor presents potential traffic-related parking and traffic infiltration. At that time, Transportation staff were referring to intensification of the entire Belmont Ave corridor.
- 660 Belmont Ave is one specific element within the entire corridor. In staff's analysis of this particular site, they took into account the existing approved use and compared with what is proposed. In going through that transportation analysis exercise, staff determined that the proposed site would not generate enough traffic and certainly not enough "new" traffic to warrant a full scale transportation impact study. In order to access potential parking infiltration concerns, parking studies were conducted.
- Consistent with 2012, one of the objectives of the Mixed Use Corridor land use designation and zoning is to achieve a transit and active transportation supportive urban form. This means a change in the type of uses (away from auto-oriented uses that generate high volumes of traffic) to uses that are more conducive to pedestrians and transit users. There have been vast improvements in both transit and active transportation that were not fully contemplated in 2012 and therefore it is even more probable that trips generated within the corridor will be shorter trips and vehicle use will be that much more limited.
- In summary, staff's approach to analysis of 660 Belmont is consistent with comments from 2012. However, the transportation landscape has changed substantially since that time and is much more conducive to supporting new development while limiting the overall impacting to adjacent residential neighbourhoods.

The Parking Study and Transportation Demand Management Plan document are attached to the application information at www.kitchener.ca/PlanningApplications

Please let me know if you have any other questions.

Sincerely,

Janine Oosterveld, MCIP RPP

Subject: [EXTERNAL] Traffic Study for 880 Belmont

Janine,

You have mentioned several times that a traffic study was not required. Kitchener Transportation department, in their comments on the 2012 staff report, mentioned that they had concerns about traffic.

I also have concerns about traffic. I don't know what population you expect but you could calculate it using book values for condos (2.2 pph?). At least one car per condo, plus all of the food deliveries, Amazon deliveries, contractors, painters, plumbers, all the usual folks who go into homes. Then the owners visitors. Remember, nobody lives there now. And after the first condo, more are coming.

Would you kindly advise what has taken place between 2012 and now that has obviated the need for a traffic study?

Is it that a Zone Change Amendment process cannot require a traffic study? Also a Zone Change Amendment process looks at one site at a time, rather than areas as a whole. So, even if a traffic study were done it would only look at traffic from the first condo. This is surely an Official Plan decision.

Kindly confirm what has been done to satisfy the concerns of the traffic folks as expressed in the appendices of the report. Counting existing cars twice (which I think is what was done) does not appear to me to be an adequate means of assessing the traffic impacts for this development.

Kindly provide whatever study, assessment, calculations, etc. that were done to assess traffic impacts, and confirm why a traffic study was not done.

Thank you.

Subject: RE: [EXTERNAL] Belmont Towers Height vs. OP 2014

Hello,

In the 2014 Official Plan, the Mixed Use land use designation notes "*Generally no building will exceed:…8 storeys or 25 metres in height, whichever is greater at the highest grade elevation, on lands designated Mixed Use as a Urban Corridor on Map 2*".

The MIX-2 zoning, approved in 2019, permits a maximum building height of 25.0 metres and 8 storeys. Only the OP includes "whichever is greater" language.

The PowerPoint from the first NIM notes that OP permits up to 8 storeys and 25 metres (slide 12) and the existing zoning permits 8 storeys and 15 metres (slide 14).

I think that perhaps the 24 metres may have been in reference to the older MU-2 zoning that used to apply to the site.

Thanks,

Garett

Subject: [EXTERNAL] Belmont Towers Height vs. OP 2014

Garett,

The OP says

b) 8 storeys or 25 metres in height, whichever is greater at the highest grade elevation, on lands designated Mixed Use as a Urban Corridor on Map 2.

At the first public meeting in 2021 you guys are referencing 24m (see below), and you don't add "whichever is greater". Did these change in the OP or were they overwritten by a more recent document?

Thanks.

- Generally, maximum height of 8 storeys or 24m for lands designated Mixed Use in an Urban Corridor

Hello,

There are different.

The Official Plan allows 50% more in terms of storeys and 50% more in terms of storeys, can be either or, "whichever is greater".

The zoning by-law is more restrictive than the Official Plan, the height is limited to 8 storeys and 25 metres.

Thanks,

Garett

Thanks Garett.

Doesn't the OP language ("whichever is greater") take seniority over the MIX-2 (old MU-2) Zoning? I don't know how to interpret "and".

Thanks.

To:
Subject: RE: [EXTERNAL] Feb 25 meeting on 660 Belmont

Hello,

I am assisting Juliane with responding to the email questions received to date.

The Shadow Study can be found in the Urban Design Report which is posted to the City's Fileshare website which you can access by clicking here:
https://kitchener.sharefile.com/share/view/s6fc65bd2a4d64df4afc9a1113d4dfbf1

The City's criteria for shadows for tall buildings can be found on Page 18 of the Design for Tall Buildings Guidelines. The City's standard is that daily access of at least 5 hours of cumulative direct sunlight is maintained to nearby sidewalks and open spaces under equinox conditions, beginning with sidewalks located on the opposite site of adjacent ROWs.
https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_Tall_Building_Urban_Design_Guidelines.pdf

The Official Plan Amendment requests to increase the maximum building height to 13 storeys and a height of 49 metres. The Official Plan and the Zoning By-law both regulate maximum building height by storeys and metres. Currently, the Official Plan permits a maximum building height of 8 storeys (and 25 metres) on lands designated Mixed Use as an Urban Corridor. However, increases in building height, up to 50%, are permitted for mixed-use buildings without an Official Plan Amendment (in this case, 12 storeys and 37.5 metres).

The current zoning is MIX-2: Mixed Use Two which permits a maximum height of 25 metres and 8 storeys. The Zoning By-law Amendment Application also requests to increase the maximum height to 13 Storeys (49 metres).

Mixed Use (MU) Corridor zones were applied to the entire Belmont Mixed Use Corridor in early 2012. All properties in the corridor were zoned as either Low Intensity Mixed Use Corridor (MU-1) or Medium Intensity Mixed Use Corridor (MU-2). No parcels were changed to High Intensity Mixed Use Corridor (MU-3). In assigning the Mixed Use Corridor zone categories staff had regard for the Official Plan designation for Mixed Use Corridors which emphasizes the importance of achieving a built form that is compatible with surrounding residential neighbourhoods. Generally, the MU-1 zone was applied in areas that abut low rise residential development. The MU-2 zone is proposed where development could be adequately separated from low rise residential development (along the east side of Belmont Avenue or larger development sites) or to recognize existing conditions (existing apartment buildings). The new MIX zones that were applied recently as part of the City's new Zoning By-law essentially brought forward similar permissions as the MU zones.

The City has received a wind assessment which is located in the Fileshare folder. Wind mitigation measures are often designed at the site planning stage to determine what design features need to be included in a building design to break or block wind. The Design for Tall Buildings Guidelines (same link as above) provide direction for wind analysis as well.

Thanks,

Garett

Subject: [EXTERNAL] Feb 25 meeting on 660 Belmont

Hello,

That was quite a meeting. I have a few comments and questions. They are not in any order of priority.

The presentation on the shadow pattern on Sept 21 was a bit hard to take. The presenter had obviously done their homework. The impact of shadows at that time of year is obviously going to be minimal since the path of the sun is further south than during the summer months. We need this presentation for May 21,June 21,July 21 and August 21 to get a realistic pattern since the path of the sun is further north and will have a much greater impact on the surrounding neighbourhoods. Since this development is already a few meters above the trail there will be a greater impact on the neighbourhood to the East.

I am confused about many things regarding the height of buildings in the code. If I understand correctly there is a correlation between the number of floors and the height of a building. However it appears that previous councils and the planning department have cow toed to the builders by increasing the allowable height per floor because buyers of new condos want higher ceilings. I don't care how high each floor is but that should be incorporated within the existing height allowance.
Changing the height allowed per floor appears to me that it is the developers that are actually planning the city and the planning department follows along and then council rubber stamps the process.

I may have misunderstood so could someone tell me what the current maximum height for 8 stories is. Also; why is the current allowable height 8 stories for the East side of Belmont Ave and 4 for the West side? If eight is the allowable height why can that be increased to 12 if requested?

I have to question the impact on wind intensity. I don't know how this building will impact the wind but the fact that the wind is becoming stronger and more frequent I am sure there will be a bigger impact than was presented.

I have more to discuss and will continue with my concerns later. Please pass this on to anyone who can address the above.

Sincerely,

Subject: RE: [EXTERNAL] Re: Feb 25 meeting on 660 Belmont

Hello,

The City has a planned Urban Structure – meaning that every property has policies and regulations that guide existing and future uses. The City's Intensification Areas are identified in a hierarchical manner. The hierarchy is intended to establish priority areas for intensification. These intensification areas serve different city, community and neighbourhood scaled planned functions and may be different in terms of character, scale, function, and potential to accommodate growth.
https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_OP-Map-2-Urban-Structure.pdf

The City is planned with intensification areas including a series of nodes and corridors and Belmont Village is planned to accommodate additional growth as an Urban Corridor. The nodes and corridors are part of the City-wide approach to accommodating growth, and any changes would have to be considered comprehensively through future reviews of the Official Plan.

The City's Official Plan includes policies that permit buildings designated as Mixed Use in Urban Corridors to be up to 8 – 12 storeys in height subject to the applicable policies.

Mixed Use (MU) Corridor zones were applied to the entire Belmont Mixed Use Corridor in early 2012. All properties in the corridor were zoned as either Low Intensity Mixed Use Corridor (MU-1) or Medium Intensity Mixed Use Corridor (MU-2). No parcels were changed to High Intensity Mixed Use Corridor (MU-3). In assigning the Mixed Use Corridor zone categories staff had regard for the Official Plan designation for Mixed Use Corridors which emphasizes the importance of achieving a built form that is compatible with surrounding residential neighbourhoods. Generally, the MU-1 zone was applied in areas that abut low rise residential development. The MU-2 zone is proposed where development could be adequately separated from low rise residential development (along the east side of Belmont Avenue or larger development sites) or to recognize existing conditions (existing apartment buildings). The new MIX zones that were applied recently as part of the City's new Zoning By-law essentially brought forward similar permissions as the MU zones.

The Official Plan and the Zoning By-law both regulate maximum building height by storeys and metres. Currently, the Official Plan permits a maximum building height of 8 storeys (and 25 metres) on lands designated Mixed Use as an Urban Corridor. However, increases in building height, up to 50%, are permitted for mixed-use buildings without an Official Plan Amendment (in this case, 12 storeys and 37.5 metres). The Official Plan Amendment requests to increase the maximum building height to 13 storeys and a height of 49 metres. The current zoning is MIX-2: Mixed Use Two which permits a maximum height of 25 metres and 8 storeys. The Zoning By-law Amendment Application also requests to increase the maximum height to 13 Storeys (49 metres).

The scale of development envisioned in different parts of the City varies from the types of heights and densities permitted in the Downtown area, to the heights and densities for Urban Corridors, to the heights and densities in lower density, established neighbourhood as shown on the Urban Structure map linked above.

Thanks,

Garett

Hello,

I have a few of questions.

What is the criteria that makes up the MU designations?

Why is this development allowed to apply for any variances to the building code when they are outside of the official plan with respect to the ION stations?

Why does the the code allow eight stories but can have 50% added and then a developer can apply for even more floors and height?

Why have a planning department when a developer can request and usually get what they want?

Thank You,

Subject:

Good morning,
This is in regards to the proposed development at 660 Belmont. I feel strongly that this section of Belmont Ave. is not the appropriate location for this size of development. The developer claims that this will be good for the area but in reality it will be the end of Belmont Village since more massive buildings will be built along both sides of the street.
I understand that new development will always be a part of the city's growth but I think that there needs to to be a better vision created in order to preserve some of the heritage of the city. My opinion is not about NIMBY or intensification but about preserving a special area of the city.
I know that each request for development is handled individually but I strongly feel that in this case that is not appropriate. Wind and sun patterns done for one building may show no major impact -although I don't agree with that- the impact of development of the same scope will have a major impact. Wind patterns have been changing. They are getting stronger and more frequent. Based on my experience walking around the cities of K-W with all the current new towers, I suspect that there will be a wind tunnel down this section of Belmont

Ave. This could lead to a shutdown of outdoor patios. I understand that that is personal opinion but I believe that more studies need to be done before any decisions are made for this site.

One thig I have learned through this process is that a lot of criteria for development appears to be arbitrary. M1/M2/M3 designations in this case are based on distances from other structures which is arbitrary. I understand that the acceptable amount of continuous direct sun is five hours. I live on the East side of this new development and although this single proposal will not impact this I calculate that when the adjoining properties are developed we will lose direct sunlight after 4pm to 5pm depending on the time of year except for maybe Dec and Jan.

Thank you.

Subject: RE: 660 Belmont Ave

Hello

Thank you for your comments.

In response to your question, the current zoning permits a maximum of 8 storeys and 25 metres and any additional height requires a Zoning By-law Amendment which Council has authority to consider. Zoning By-law Amendments cannot be approved at a staff level in Kitchener.

Thanks,

Subject: 660 Belmont Ave

Hello again,
This is a continuation of my previous email from this morning.
I feel that the maximum height for structures on the North side of Glasgow St along Belmont should be four stories on both sides. This would not be out of line with the surrounding area. Those of us living on the East side of Belmont already have a grade disadvantage of about two stories.
I cannot understand why there is a code stating the height is four or eight stories but can be increased by 50% if the developer proposes a mixed use building. This seems like a developer created plan ,not a planning department code. To me it appeared that developer was not clear on what businesses might occupy the main floor so this should be a red flag. I found it interesting that another developer developing a site on Queen St in the downtown core claims that it is difficult getting retail to commit to the main floor of residential towers. That should be something else to consider.
I understand that other developers are buying up the other properties along this section of Belmont Ave. so I am sure this will lead to higher rents and eventually to the loss of some of the existing shops. I find it hard to believe that with condo towers along this section of Belmont that small business shops like there is now will be able to afford the even higher rents. There will be no Belmont Village as we know it. It will become just another row of massively invasive towers.
As I said earlier there will be a major impact on the area with regards to sun and wind but also light pollution.
The developer should not be allowed to have fewer parking spaces than are currently required in the code since this will lead to more parking issues in the area.
I have more comments that I will convey at a later time.

I know that it has been stated that no decision has been made but can all of you verify that no one employed by the city has guaranteed this developer a minimum number of stories/height.

Subject: [EXTERNAL] Re: 660 Belmont Ave

Hello Garett,

I understand the current height numbers. What I would like to know is the methodology that was used to establish a height of 8 stories on the East side of Belmont between Glasgow and Union but 4 for the West side. I do not understand how that difference in height is justified-particularly when the height can be increased by 50%. This could potentially become a difference of six or more stories.

I know the official plan says there is a buffer on the East side of Belmont that allows enough distance between any new development and existing structures but that distance diminishes as you proceed North on Belmont. Gilder Green Park is pie shaped. I realize that for this potential development that the criteria used may apply but I am also concerned about the rest of the street that will be developed if this project is allowed to proceed.

I would also like to know if this developer has been given any indication about a minimum height that will be allowed.

Thank you,

Subject: 660 Belmont Ave

Hello again,

This is a continuation of my previous email from this morning.

I feel that the maximum height for structures on the North side of Glasgow St along Belmont should be four stories on both sides. This would not be out of line with the surrounding area. Those of us living on the East side of Belmont already have a grade disadvantage of about two stories.

I cannot understand why there is a code stating the height is four or eight stories but can be increased by 50% if the developer proposes a mixed use building. This seems like a developer created plan ,not a planning department code. To me it appeared that developer was not clear on what businesses might occupy the main floor so this should be a red flag. I found it interesting that another developer developing a site on Queen St in the downtown core claims that it is difficult getting retail to commit to the main floor of residential towers. That should be something else to consider.

I understand that other developers are buying up the other properties along this section of Belmont Ave. so I am sure this will lead to higher rents and eventually to the loss of some of the existing shops. I find it hard to believe that with condo towers along this section of Belmont that small business shops like there is now will be able to afford the even higher rents. There will be no Belmont Village as we know it. It will become just another row of massively invasive towers.

As I said earlier there will be a major impact on the area with regards to sun and wind but also light pollution.

The developer should not be allowed to have fewer parking spaces than are currently required in the code since this will lead to more parking issues in the area.

I have more comments that I will convey at a later time.

I know that it has been stated that no decision has been made but can all of you verify that no one employed by the city has guaranteed this developer a minimum number of stories/height.

Subject: 660 Belmont Ave

Good afternoon,
Since I have not received a response from any councilor, nor from Garett Stevenson, I take it that a minimum height of over eight stories has been promised to this developer. I hope I am wrong. If this has happened then it shows a complete lack of transparency. Another case of one developer outweighing an neighborhood. This unique area will be lost. I am very disappointed in the process and you who are supposed to represent us the citizens.
I still think that at the very least, wind and sun patterns should be required based on the near future new development on both sides of the street.
Thank you,

Subject: [EXTERNAL] Re: 660 Belmont Ave

Hello.

I realize that no "official" decision has been made but I would suggest that at the very least the planning department will recommend the minimum height that the developer is requesting. I believe that the Official Plan that allows eight stories on the East side of this stretch of Belmont Ave. and four stories on the West side is flawed. I know that that is based on the distance between new development and existing residential homes but I would suggest that is a an arbitrary plan. It is as though the decision is based on a thought that there is a major difference from one side of a two lane street to the other. To add to the arbitrary decision making the developer can apply for mixed use and then be allowed a 50% increase in height. So now there is a height of six stories on one side of a street and twelve on the other. Double the height. Explain to me the logic in that.

Can you explain to me why there is an "Official Plan" but a developer can buy property knowing what the the codes are but then "request" multiple variances and generally get them. As I have said in previous emails, I understand intensification and that politicians at the local level are trying to get people out of cars but the developers should not be allowed to dictate how this is done.

There have been articles written in the Record-one on November 21,2009 amongst others- about the uniqueness of Belmont Village that this and future developers want to destroy for their own benefit.

Please pass this on to council.

Thanks for getting back to me.

Sincerely,

Subject: 660 Belmont Ave

Hello,
I have heard that at least one business has been approved for occupancy on street level for 660 Belmont Ave. If this is true then does it mean that the developer has gotten approval to build? I would suspect that he has gotten approval for more than the eight stories that is allowed. If this development is allowed to go ahead then it would tell me that this council is not interested in preserving any historically significant districts or historical buildings with in the city if a developer wants to line their pockets.
As a tax payer that contributes to your salary/benefits and pension I would suggest a downsizing of the planning, code and bylaw departments as well as city council since a developer can override almost any criteria that is part of the "official plan". In this case he wants more density with less parking as well as other concessions. You could set up a one off committee of developers to come up with a vision of what the city should look like. I am sure it would only take a few hours since it would be one sentence. '"What ever we think is best." It is too bad that it appears that no one that works for the city-including this and previous councils- has any vision of what the city could look like I can predict that no one who buys into these high end condos will be walking to the nearest Ion station in front of Grand River Hospital. Instead there will be more illegal parking in the area. I sure hope the two councilors that represent this area are listening to the Friends of Belmont Village because this project is only the start of the end of the village. This project is outside of the "official plan" yet the developer wants to be included. Another variance!
Transparency!

Sincerely,

Subject: RE: [EXTERNAL] Re: 660 Belmont Ave

Hello,

I have received your comments.

Both sides of Belmont Avenue are designated in the Official Plan as Mixed Use. The current zoning on the west side permits up to 14 metres and 4 storeys. The zoning on the east side of Belmont permit 8 storeys and 25 metres.

Mixed Use (MU) Corridor zones were applied to the entire Belmont Mixed Use Corridor in early 2012. All properties in the corridor were zoned as either Low Intensity Mixed Use Corridor (MU-1) or Medium Intensity Mixed Use Corridor (MU-2). No parcels were changed to High Intensity Mixed Use Corridor (MU-3). In assigning the Mixed Use Corridor zone categories staff had regard for the Official Plan designation for Mixed Use Corridors which emphasizes the importance of achieving a built form that is compatible with surrounding residential neighbourhoods. Generally, the MU-1 zone was applied in areas that abut low rise residential development. The MU-2 zone is proposed where development could be adequately separated from low rise residential development (along the east side of Belmont Avenue or larger development sites) or to recognize existing conditions (existing apartment buildings). The new MIX zones that were applied recently as part of the City's new Zoning By-law essentially brought forward similar permissions as the MU zones.

Official Plan policy 15.D.4.23 allows the City to consider increases to the permitted building height of up to 50 percent of the permitted building height where a development or redevelopment provides a mixed use building containing residential units. It must be demonstrated that a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied.

Thanks,

Garett

Re: 660 Belmont Ave

Dear Mr. Stevenson,

I was totally amazed at your reaction to the dog and pony show published in the Record on Nov. 6. The developer of this property presents his plan B which still does not meet all criteria of the zoning but you are giving them credit for listening to the residents plus making a $250,000 donation for affordable housing. If he is a BFF of Belmont Village as he says he is then I would suggest he propose a design of eight stories max. I am under the impression that you are supposed to be working for the city and therefor the residents, not the developer. We pay your wages/benefits and pension but you seem to completely ignore us. This latest proposal does nothing to address our concerns. We are not against development-that is inevitable- but the sheer scope is problematic. I understand that the developer owns the adjoining property to the North. Maybe he could come up with a plan to develop both properties at the same time with a total height of six stories. The city could fast track the approvals. It would be nice to have official plans that are adhered to.

You have to realize that this will destroy the village since this is only the beginning of redevelopment for this section of Belmont. This is a well-established and well known area that will lose its charm because the smaller businesses will be forced out when these high rises are built.

On another note; I am wondering if the planners for this city are allowing these developers to discriminate against families with children since they all seem to be building one and two bedroom living spaces.

Would you please explain again how the official plan has a height of four stories on one side of Belmont Ave in this section but the other side has eight? I know you said it is because of the distance from existing development but I would like to know what the criteria is. If the developer's property runs to the Iron Horse Trail then I would suggest the criteria is flawed. Also; why is there a clause that allows a developer 50% more for mixed use? Maybe you do not understand that this means that a starting difference of four stories becomes six. This mixed use clause is an automatic green light for developers since they will take advantage of it.

Sincerely

Garett Stevenson

Hi Juliane,

Belmont Village is a great place with lots of commercial businesses, that will benefit from a development on this site. That said I think limiting the development to the zoned eight stories, similar to at least one of the buildings in the Trio-on-Bemont development. The higher units at that site are overly high and caused gusts of wind down the rail trail, as well as shadowing that caused ice to form regularly which is a safety concern. This is a much bigger site and can somewhat accommodate the high building, this is not the cause for the Dettmer site, which is contained. I believe the development should be maintained within the bylaw height.

Either way I believe the following are required:

1. Wind study for Belmont and the rail trail, gusts along rail trail by Tri on Belmont are problematic.
2. Shade review, as this will impact the rail trail
3. Traffic study, not sure where the driveway of this site will come out, assume on Belmont, the intersection of Belmont and Gage is poor now with the Tim Hortons and its drive through, this development will make problem worse.

Regards

Hi Juliane

Thanks for the detailed information, there is a lot. I had assumed the City had already summarized some of the highlights but I guess not. One might think the City is trying to bury us in reports. In terms of areas/files I have looked at:

1. Architect Design Package - I think the drawing on page 13 of this package is most telling, the proposed structure will be huge and over shadow the entire neighbourhood, I believe this is a mistake and probably why the usual restriction is 8 stores is in place. The height is to be almost 50 m above the street. As nice as the presentation was, this will never fit into the streetscape.
2. OPA application - application indicates no waste stored on site, but I believe used tires have often been stored onsite. Also like most garages I would think there is oil/fuels about the site and hence contamination.
3. Pedestrian Wind assessment - the proposed building will impact wind in particular in the autumn and winter and although the levels based on study are at standing.walking levels, they seem to be well above current levels, and if your development at Gage street is any example the wind will be significant on Belmont and the rail trail.
4. Tree management - it appears that a significant number of trees on the one side of the rail trail will be removed - this is unacceptable, and I don't see a plan to replant similar number and size.
5. Salt Management - the City performance on salt management is not good and Belmont VIllage is not a good example (or the rail trail) of use and hence this report is useless
6. Urban Design Report - the shadow analysis indicates non-impacted times, but does not provide the base case or current conditions, it is obvious from this that the building will impact the area in terms of shadow from current conditions and where does "3 to 4 hours of sunlight ..." is ok come from, This is cherry picking results, the base case needs to be shown to show how much sunlight we will lose.

I still don't see a traffic study, but maybe its buried in the mass of reports. Overall I think the City is making a mistake to promote this development. Our Planning department seems a little too taken with the development so I don't have high hopes. A new residential unit would be great for this property but the height should be contained to 6 to 8 levels, something in keeping with the character of the area.

Regards

Subject: RE: [EXTERNAL] Re: Post Engagement Survey - 660 Belmont Avenue West

Hello

Thank you for your email and sharing your concerns.

Participation in our post-engagement survey is completely voluntary. Our goal with collecting socio-demographic data is to ensure that every resident has access to the highest quality services that we can provide – in this case, community engagement. The Ontario Human Rights Code encourages the collection of this kind of data when the purpose is to monitor discrimination and promote equity.

Answers to the survey questions will help us understand who is utilizing our services, and who may be underutilizing the services available to them. We know that sometimes people experience discrimination, due to many different factors, when it comes to service delivery (e.g. age, income, race, language, disability, or gender identity). If we don't ask, then we won't know if discrimination or exclusion is happening, and if we don't know who is utilizing the services, then we cannot develop strategies to correct any existing barriers.

Data is foundational for the creation of equity-informed engagement opportunities that are accessible to all of our citizens – this is our end goal.

Thanks,

Garett

Hi Garett,

I didn't think much of your survey, asking if comfortable, convenient and satisfied - but pretty vague and self-serving questions. Then the rest of the survey wants to conduct a census of the submitter. I found these questions intrusive and unrelated to the survey's purpose. I will not participate in future city surveys if this format is maintained.

Subject: [EXTERNAL] Re: 660 Belmont Avenue West - Comprehensive Engagement Report

Hi Garett,

Thanks for this, its a big document, seems like a lot of concern, I hope the City will consider it wisely. I didnt realize there was a site visit for concerned people - I don't recall that invite. As was raised in all the sessions I believe the height of the proposed building is an issue and given the status of other properties (I understand some have been puchased by developers) along upper Belmont could lead to a drastic change in the character of the village. Which as discussed in my session was the basis for an earlier review by the City which raised Belmont Village as an example for other areas in the City. I believe this is captured in the Urban Design Manual - Design Briefs document (2014), which indicates:

" The Belmont Avenue corridor is a unique commercial corridor in the city. The corridor has two distinct sections separated at Glasgow Street. Upper Belmont is located north of Glasgow, and includes Belmont Village, a compact urban village centrally located in the Westmount neighbourhood. The Village provides a range of specialty shops and commercial uses serviced by rear laneways. Lower Belmont is located south of Glasgow, and contains a range of office uses and higher density housing. Both sections have access to public parks and are bounded by the Iron Horse Trail to the east"

So much for the unique corridor - not sure why the City develops this concept then allows for inappropriate development.

Strategy continues with:

" - Land Use: Encourage mixed use buildings (retail and residential), specialty shops and restaurants in Upper Belmont. Encourage higher density housing, office uses and mixed use buildings in Lower Belmont.

- Built Form: Maintain low-rise, compact urban form in Upper Belmont (2-5 storeys with step backs for increased height). Encourage mid-rise forms (3-8 storeys) in Lower Belmont with opportunity for high-rise forms (10 storeys)."

This would indicate City intended to maintain upper Belmont as mixed use with speciality stores and restaurants and maintain low-rise (2-5 storey) buildings - not 13 storey condos, with cathedral ceilings.

To maintain the City's vision for the area I think the City needs to push back and significantly reduce the height of this and any future developments in Belmont Village, otherwise the character that this development seems to think will draw people to his building will be lost anyway.

Regards

Hello

That application was approved in 2014 before our current Official Plan and Urban Design Manual so we did not have the ability to require the same level of studies as part of a development application. That site was subject to site plan approval and did not require an Official Plan or Zoning By-law Amendment.

I know that a Transportation Impact Study was required, but I do not see a requirement for a shadow or wind analysis in the file.

When I am in the office next week, I will track down and scan a copy of the TIS and send you a copy (I do not have a digital copy).

Thanks,

Garett

Good morning Garett

From my previous questions concerning the 660 Belmont development proposal, I have often thought to compare this development with the recent development at 460 Belmont W (Trio on Belmont). In particular in terms of the wind, shade and parking. Would it be possible to get any studies undertaken for that development (Trio on Belmont) in particular concerning wind, shade or parking studies? This would help me in my review of the new development site.

Thanks .

Subject: RE: 660 Belmont Questions

1a. Policy 15.D.4.23 applies to any property that is designated as Mixed Use and identified as a City Node, Community Node, Urban Corridor, or Neighbourhood Node. The policy is approved and is applicable (approved with the 2014 Official Plan). The policy is implemented through a Zoning By-law Amendment, which Kitchener City Council is the approval authority of. That application has not been considered by Council yet.

1b. Zoning By-law 2019-051 applies to 660 Belmont Avenue West. The zoning of the lands is MIX-2 (128), (142), (49)

1c: In the 2014 Official Plan, 660 Belmont Ave is within the conceptual MTSA (grey hatching). However, the City and Region we have since completed work and know that the western boundary of the KW Hospital/Midtown MTSA will be Iron Horse Trail. As such, the Urban Structure Map in the Official Plan will be updated by removing the conceptual circles, and showing the actual boundaries that have been endorsed by Region Council. This map, prepared as part of the Midtown Neighbourhood Planning Reviews, shows the limit of the change to Belmont Village. DSD_PLAN_NPR_Map_2_Urban_Structure.pdf (kitchener.ca)

1d: Density bonusing is a different permission from the policy direction for additional height reference above. The Planning Act, under Section 37, allowed for increased density in exchange for community benefits. The

Province has eliminated the current Bonusing provisions in the Planning Act (applicable only until September 2022) which is why we have *Reserved* new bonusing regulations in the new Zoning By-law. We will update the new Zoning By-law with Inclusionary Zoning regulations and develop a Community Benefits Charge By-law (both projects are not yet completed) to replace density bonusing.

2 Belmont Lane Ownership;

2a: Yes, if the lane is purchased by the developer they would own the lands and consolidate all lands together.

2b: The lane can be technically sold if Council should choose to do so. Services would need to be relocated or protected with an easement.

2c. The decision of whether or not to sell Belmont Lane will be determined by Kitchener City Council. Generally, the process for sell City-owned land is as follows:

- A potential purchaser contacts the City of Kitchener with a request to the purchase land
- City internally circulates the request to City Departments to determine if the land is to be retained or if it could be sold
- If the lands are required to be retained (current/future City use, infrastructure) the applicant is advised that the request cannot proceed
- If the City deems that the land is surplus and can be sold to the applicant subject to Council approval then the following takes place:
    - The City engages an AACI Appraiser to value the land
    - A Staff report is prepared recommending the land be declared surplus, notice be given to close the road and staff be directed to negotiate the sale of the land to the applicant at a price which shall be the Fair Market Value including any conditions
    - The Staff Report is tabled at a public meeting of Council where the public can provide their input regarding the sale – in this case the development applications and lane sale would be the same staff report but no timing is known at this time
    - Public notification is typically through the Staff Report and the agenda and meeting date posted on the City's website – in this case everyone who participated in the process will be made aware of any public meetings on these applications
    - Council will vote on the request and if they agree to sell the land will enter into an Agreement of Purchase with the applicant
    - On the closing date the applicant will provide the City with the sale proceeds and title will be transferred to the applicant

2d: The sale of the lane will be considered at the same meeting as the Official Plan and Zoning Amendment applications. Council does have a right to obtain legal and financial advice in camera in advance of the consideration of the lane sale, but the decision to sell the lane must be in a public meeting.

3 Environment;

3a: The City, Region and other partners have conducted a phase 1 feasibility study and have determined that a District Energy system centered in the Innovation District (King/Victoria, Bramm Yards area) is viable. Belmont Village was not identified as a viable location. The City, or other prime investor, is scheduled to make a business decision on whether to develop a district energy system in late 2021, with design and construction shortly their after. If that is successful, there may be an opportunity to reconsider other locations.

3b: The applicant has advised that the proposed building would not be seeking a LEED certification; however, a number of the site and building elements that form part of the LEED rating system will be incorporated into the building design as part of normal practice. Planning staff have asked for confirmation of what elements will be included, including a grey water reuse system, and are awaiting a response.

Thanks,

Garett Stevenson

Subject: RE: [EXTERNAL] My Technical Vision For Belmont Avenue - 660 and More

Hello,

Thank you for providing - I will attach this to my staff report as well.

I will keep you posted once we receive an update from the Developer and when meetings are scheduled (neither has happened yet).

Thanks,

Garett

Subject: [EXTERNAL] My Technical Vision For Belmont Avenue - 660 and More

Hello Garett,

I thank you for your in-depth replies to my prior inquiries that began when I first looked deeply into the documents related to the 660 Belmont developer's proposal submission.

Subsequently, I took a wider looked at the development process around the application I observed serious obstacles to well reasoned development; 1) developer submits a complex proposal twice the height and more beyond current zoning ignoring current planning guidelines with many missing details and aspects, 2) planning department spends valuable hours upon hours reviewing documentation only to have to ask for more information by asking for a response to eighteen undisclosed questions,
3) community notification area is very small in relation to the scale and wider community impact of the application hence my late engagement,
4) developers appear to run the clock perhaps hoping to get a pass due to delays in the approval process, 5) developers submit further information requested by the planning department at the eleventh hour just before approval meetings leaving the planning department and local communities insufficient time for well reasoned consideration and comment, 6) committee of adjustment and council vote on city wide precedent setting applications with seemingly limited or nil guidance taken from the extant Urban Planning Guidelines, zoning

bylaws, and other forward thinking planning documents, nor demand sustainable technologies, 7) planning department does the best they can with insufficient staff necessary for case-by-case review of the current volume of applications leaving little time for both broader community and future-focused planning, 9) local communities initially became enraged well after the application process begins, and 10) then after much reflective and community discussion residents become engaged simply asking for reasonable and sustainable development in their neighborhoods.

I spent a lot of time during high school having great fun on Belmont. My children have greatly enjoyed the Belmont area. Our grand children have had fun times this summer on Belmont. I personally ask that the proposed development consideration be well reasoned in a manner that both preserves and enhances the intangible social, cultural, heritage, small business, and village-community aspects for the benefit of future generations.

So, I offer the attached, my intended council presentation, that speaks to the broader aspects of the 660 Belmont application for your perusal.
An earlier draft was read at a Friends of Belmont Village meeting, discussed with my brother Dave for technical aspects, discussed in wider aspects with my friend Mario, forwarded to my Councillor Debbie Chapman, and emailed to John Thomson at Kitchener Utilities after we had a technical discussion about my personal heating needs (leaking rental hot water tank and an old furnace) and how a nearby district heating plant would save me a lot of money. Councilor Margret Chapman is now also receiving this close to final version of my presentation.

Regards,

86 York Street, Kitchener

Belmont Village - A Technically Enhanced Future Rev1.3.1 October 5, 2021

1. Environmentally sustainable, culturally sensitive, and socially enhancing urban intensification is technically feasible. Ad hoc development plans like those submitted to the City of Kitchener by the Zehr Group does none of these. The set of documents and zoning change request submitted for 660 Belmont mostly ignores the new councilor approved Urban Planning Guideline that clearly outlines how visionary development should be done.
2. Here is a technical vision for the Belmont Lane area. City of Kitchener appropriates the vacant property, the old ESSO gas station, at the corner of Belmont and Union. Kitchener Utilities puts in a district heating plant, similar what is in planning stages for the city core, to reduce pollution and increase energy efficiency. Kitchener-Wilmont Hydro installs, in the same underground facility, a utility scale battery storage facility charged by roof-top, canopy, and window generated solar power from any new development. Kitchener Utilities collects all gray water and treats it, again in the same facility, for discharging into a re-established creek along Gilder Park for water table recharge of the Westmont Drain, a geological sand and organic silt feature, thereby enhancing tree growth and environmental restoration along the Iron Horse trail to Raddatz Park. As a bonus the businesses and surrounding neighborhoods gain a parkette at Union and Belmont atop this world class technical infrastructure envisioned as the Belmont Improvement Area (BIA) District Utility Plant.
3. Belmont Lanes East and West becomes a contiguous underground building access and service corridor loop connected to the underground District Utility Plant. The first level below the lanes (East, West and both North, South connectors) becomes a pedestrian mall and small electric delivery vehicle corridor for all the adjacent property basements. The new underground people and small independent business oriented Belmont Mews is directly below Belmont Lanes. Underneath the existing trail side parking becomes new multi-function small scale commercial condominium space for all properties from 660 to the District Utility Plant with some units offering trail level and mews mall storefronts.
4. The private owned parking next to the Iron Horse Trail becomes green space adjoining the BIA Utility Park. The BIA parking lot goes multi-story underground and atop becomes an open area with a half soccer field in front of a band shell for public concerts like this summer's stage focused, but a quieter, Bestival. The first underground parking level is high enough to support delivery trucks for the year round open market. Business intensification takes place in the basements of all properties adjacent to the existing city owned lanes, under the green space, formerly private parking, next to the Iron Horse Trail, and in the west side BIA/City underground market/parking lot.
5. All the Belmont Lane adjacent property owners would have basement level access to publically owned and operated heating, cooling, water, gas, separated brown sanitary and gray waste water disposal, recycling facilities, electricity, and world class telecommunications. Energy is aggregated from sustainable photovoltaic, wood biomass, deep well geothermal heat pumps, and utility scale electricity storage batteries. The city owned and operated Belmont North District Energy Utility co-ordinates and manages the underground facility and generates a revenue stream through energy and service billings plus carbon credits for the City of Kitchener. The BIA manages and CofK operates an ultra fast communications hub served from District Utility Plant for all. Belmont property owners have the benefits of not having to run polluting roof top heating units, neighbourhoods have reduced air pollution by removing private low efficiency gas heaters and boilers, Victoria Park feeder Sandrock Creek gets a fresh year round water source, children in Gilder Park get a naturalized pond for fogs, turtles, birds and much more!
6. How to implement this technology vision? Political will to implement the Planning Guidelines and stick to existing zoning bylaws. Ceasing zone changing ad hoc development for short term and short sighted private profit. Engage your invested citizens, Belmont Improvement Area Board of Management, and city planners now. Get coordinating the resources of the Federal, Provincial and Regional governments, the local College, our two Universities, and local engineering firms into a forward thinking sustainability focused steering group. Well reasoned development now builds a better future!

Hello all,

In the attached written proposal and site plan/map pdfs I offer my best effort vision for enhancing the future of Belmont Village as my response to the *660 Belmont Avenue Zone Change Application*. Four pages detail pathways to better implement the City of Kitchener's *Urban Planning Design Manual* and to move forward the Region of Waterloo's *Community Energy Investment Strategy*. The map outlines the posited development area, a district utility facility, an underground Belmont Lane Mews, and much more.

Respectfully,

Garett Stevenson

Subject: [EXTERNAL] Visioning Property Redevelopment
Attachments: Belmont Technical Vision 2.4.3.pdf

Hello ;

I have looked at the the properties around Central and see a lot of potential especially if adjacent property owners are interested in mutually beneficial collaborative planning. The City has in their Urban Design Guidelines many visionary aspects however in a single property redevelopment they are difficult to economically implement. For example a District Energy Plant that serves a whole block will provide lower site capital and heating and cooling operating costs to each property owner. Parking Requirements takes a large percentage of land area however if a large shared parking faculty can accommodate multiple owners' needs much more valuable redevelopment land becomes available to each property owner. Opening communal places for people to enjoy in a whole block, as Central is located in, can make the whole area become a destination like Belmont Village. There is much more to collaborative development that affords economical feasible and sustainable community alternatives available though property by property redevelopment. Take a look at the attached alternative development proposal I have envisioned and let me know if you would like to know more.

Cheers,

86 York Street
Kitchener, ON

December 5, 2021

City of Kitchener
PO Box 1118 Kitchener, ON
Canada N2G 4G7

Dear Mayor Vrbanovic and Kitchener City Councillors Debbie Chapman, Scott Davey, Kelly Galloway-Sealock, John Gazzola, Bil Ioannidis, Margaret Johnston, Sarah Marsh, Christine Michaud, Dave Schnider, Paul Singh:

My name is Norman Emptage, and I am a retired Professional Engineer. I am writing to introduce, as an alternative enhancement to the proposed and precedent-setting 660 Belmont development, a future vision similar to one currently being studied for a district energy system in the Innovation District near King and Victoria streets. My interest in this project stems from my recent involvement with community members who have been closely following the proposed 660 Belmont Avenue West project since its announcement last year. I bring to the issues a higher level of technical understanding and acuity in reviewing the developer's documents.

It seems to me that the current development approval process fails to address the City's stated goal of promoting sustainability within a liveable community and offers little opportunity for careful thought about the wider impact of development on the community now and for coming generations. In the case of the 660 Belmont site, my own fond memories of Belmont Village have ignited a desire to ensure that development considerations be well reasoned, and that, for the benefit of future generations, any proposal commit to the preservation and enhancement of the social, cultural, heritage, small business, entrepreneurial and village-like atmosphere that will be affected by this development.

This background information offers a vision of a reimagined Belmont Village and an opportunity for City Council to breathe sustainable, future-oriented life into the current development process. It also speaks to broader considerations with respect to the 660 Belmont application. An earlier draft was shared with several others. Copied on this email are WR Community Energy, Belmont Improvemnt Area Board of Management and John Thomson of Kitchener Utilities, with whom I have had an early, formative technical discussion.

Please note that this is a vision, not a professional opinion. Implementation will require detailed broad engineering and architecture input, similar to the requirements for those currently being assessed with regard to the Innovation District energy system and its overall planning and design.

I will deliver this proposal at a future meeting of the Planning and Strategic Initiatives Committee. In providing you with this advance draft, I hope you will have ample time to reflect upon and consider this tailor-made opportunity for Kitchener to solidify a leadership role in adopting cutting-edge, sustainable technology. Doing so will help ensure a liveable Kitchener well into the future.

Should you have questions prior to the PSIC meeting, I would be happy to answer them.

Respectfully and with much thought,

Cc:

BIA DISTRICT – Mews & Utility Plant Proposal

Belmont Village – A Technically Enhanced Future

Introduction

Environmentally sustainable, culturally sensitive, and socially enhancing urban intensification is technically feasible. Ad hoc development plans like those submitted to the City of Kitchener by the Zehr Group do nothing to accomplish that goal. The documents and zoning change applications submitted for 660 Belmont mostly ignore the maximums set out in the Zoning By-Law and the direction of the **Urban Design Manual** – identified in the Official Plan as a guide for decision making – which clearly outlines how visionary development should be accomplished.

The following is my technical vision of what Belmont Lane could become.

Underground District Utility Plant Site – Belmont and Union

The City of Kitchener would reduce air pollution and increase overall energy efficiency in Belmont Village by acquiring the vacant property on the south-east corner of Belmont and Union and enabling Kitchener Utilities to run an underground district heating plant similar to the one planned for the City's Innovation District. In the same underground facility, Kitchener-Wilmot Hydro would install a utility-scale battery storage facility charged by rooftop, canopy, and window-generated solar power obtained from any new development within Belmont Village and its surroundings. A very large backup electricity generator would supplement the battery storage to support any critical services in this underground facility and the local area.

In the same facilities, Kitchener Utilities would collect all resultant grey water and treat it so it can be discharged into a re-established creek along Gildner Green. The goal would be recharging the water table of the Westmount Drain, a geological sand and organic silt feature. This would enhance tree growth and environmental restoration along the Iron Horse Trail from Union Avenue to Raddatz Park.

As a bonus, local businesses and surrounding neighbourhoods would gain a parkette at the corner of Union and Belmont, which would sit atop this world-class, cutting-edge technical infrastructure that I envision as the **Belmont Improvement Area (BIA) District Utility Plant**.

Belmont Lane Two-Level Structure

Belmont Lanes East and West would become a contiguous underground building access and service corridor loop connected to the underground **BIA District Utility Plant**. All properties adjacent to Belmont Lane would benefit from

- basement-level access to publicly owned and operated heating, cooling, water, gas;
- separated brown sanitary and grey wastewater disposal;
- recycling facilities;
- electricity; and
- world-class telecommunications.

The first level below the east and west lanes as well as their north and south connectors would become a pedestrian mall, possibly called **Belmont Mews**, and also a corridor for small electric delivery vehicles to serve the basements of adjacent properties. The new underground Belmont Mews, located directly below both Belmont Lanes would be people-oriented and focussed on small independent businesses.

For additional community green space and small business development, the City of Kitchener would acquire the privately owned parking lots between Belmont Lane West and the Iron Horse Trail. New, multifunctional, small-scale condominium-style commercial space would extend from the rear of 660 Belmont to the **BIA District Utility Plant** below the current trailside parking. Some condo units would offer both trail-level and Mews mall storefronts, and there would be green rooftop space along its length. The Belmont BIA would manage this new green space and the business condominiums on behalf of the City.

BIA Parking Lot on the West Wide of Belmont

The current BIA parking lot on the west side of Belmont would become a multi-level underground structure providing parking for business and residence intensification. The flat open space atop the parking structure would feature a small playing field that becomes a community ice rink in winter. At the south end of this new green space, a permanent stage and bandshell would host public concerts, various forms of entertainment, an expanded Bestival, and public discourse venues. The first parking level below ground would have clearance high enough to support access by delivery trucks for a year-round open market run by the BIA.

Logistics

- The BIA or another entity would manage parcel services to the basement-level business entrances.
- Energy would be aggregated by Kitchener Utilities from sustainable photovoltaic, wood biomass, deep well geothermal heat pumps, utility-scale electricity storage batteries, and natural gas.
- A City-owned and operated entity, possibly called the **Belmont North District Energy Utility**, would co-ordinate and manage the underground facility.
- The City of Kitchener would collect an ongoing revenue stream through energy, telecommunications, and service billings ***and*** gain carbon credits from the various green energy sources.
- The Region of Waterloo would operate the new autonomous **MEWS (Magical Electric Wagon System)**. This people- and goods-moving vehicle system would be developed by the University of Waterloo and be locally manufactured. Nearly all the underground Mews-level and most of the at-grade-level Belmont Lane East and West traffic would be **MEWS** vehicles.
- The City of Kitchener would operate and the BIA would assist with the management of an ultra-fast communications hub for everyone connected to the **BIA District Utility Plant** thus facilitating local digital business development and high-speed access for residents in the local **ION** intensification area.

Benefits

1. Business intensification would expand to encompass the basements of all properties adjacent to the existing City-owned lanes, the former private parking lots next to the Iron Horse Trail, and the west-side BIA/City underground market/parking lot.
2. Meaningful residential intensification can take place in Belmont Village by simply adhering to the current zoning by-law categories. These zoning categories allow up to three storeys or seven storeys of residential units, on the westerly and easterly sides of Belmont Avenue, respectively.
3. Belmont Village, growing upon the existing social, culture, and heritage characteristics of "old" Belmont, would become a more vibrant live, work, and play destination.
4. Belmont property owners, no longer running polluting rooftop heating/cooling units, would benefit from a more reliable and efficient energy system and lower operating and maintenance costs.
5. Air pollution in the neighborhood would be reduced with the removal of private low-efficiency gas heaters and boilers.
6. Additional emergency electricity would be supplied to Grand River Hospital through a high voltage feeder line connected to the **BIA District Utility Plant**.

7. Over 0.7 hectares of public green space would be added to Belmont Village.
8. New amenities would include a combination bandshell and stage, a speakers corner, a small playing field, a combination ice rink/splash pad, pollinator gardens, picnic tables, and benches.
9. The Victoria Park feeder, Sandrock Creek, would have year-round freshwater from the recycled grey water, roof top collection systems, and local storm drains.
10. The naturalized long narrow pond at the trail side of Gildner Green would become a treasured place to find fish, frogs, turtles, birds, and small animals.
11. WR Community Energy would have a low-risk medium-scale district energy plant to design and implement, and Kitchener Utilities would gain valuable experience operating it.

Implementing this Innovative Sustainable Technology Vision

Achieving this vision requires a shift in focus and a willingness to undertake the following initiatives:

- Recognize that current development processes are failing to serve us well and are not carved in stone.
- Activate political will to implement the vision set out in the **Urban Design Manual**.
- Stick to maximums specified in the appropriate Council-approved Zoning By-Laws.
- End approval of zoning amendments for ad hoc development that serves only short-term and short-sighted private profit.
- Sufficiently staff the Development Services Department so the City is able to guide developer's integration of their places into the global aspects of place making, and
- Engage invested citizens, the BIA Board of Management, and city planners now.

The following will further move this and <u>similar</u> projects forward:

- Tapping into and coordinating resources from the Federal, Provincial, and Regional governments; the local college and both universities; and local engineering and architectural firms in order to assemble and mobilize a forward-thinking sustainability-focussed steering group.

Remember that it is within the power of City Council to take action that will progress us closer to the City's stated goal of promoting sustainability in the community.

Well-reasoned development today will build a better future for everyone tomorrow!

Subject: [EXTERNAL] Why the BIA Should Manage Public Spaces in The Village and How?

Hello

The following article presents a case study for why the BIA should manage all the posited public and green spaces in my Belmont Village Vision. The underground mall, The Mews, would provide The Village with an additional 0.6 hectare of public space. The additional at grade green space provided in my response to the 660 Belmont Zone Change Application is 0.7 hectare. Measured in the older unit, the acre, my vision would afford the BIA an opportunity manage an additional 3.2 acres of public and green spaces to enhance The Village through its oversight.

https://www.theburningplatform.com/2021/12/08/a-different-park/#more-254468

How to make these posited public and green spaces come to fruit? The BIA, the City, citizen groups, like the Friends of Belmont Village, and other community invested parties like, The Canadian Alliance to End Homelessness, would need to engage all Mews adjacent property owners and potential developers a keenness to carry out my vision, that is, generating an alternative, competitive, financial, places and place making proposal that provides future benefit to all.

With humility and respect,

Garett Stevenson

Subject: RE: [EXTERNAL] 660 Belmont Avenue Revised Site Plan - OBC Access Route Design - Fire Lane Decreased Dimemsions - Horse in the Cart Procedure

Hello,

Thank you for your email. The City's Fire Prevention Officer reviews all site plan drawings in accordance with the Ontario Building Code and the City's Emergency Services Policy at the site planning process.

For larger buildings, sprinklers are requested and firefighting occurs largely from within the building. Through the site plan process, the Applicant will have to identify the location of the Siamese connection (fire department pumper connection). The proximity of that connection to the street is carefully reviewed so that fire trucks can be within the required distance (those connections are often facing the public street like Belmont Avenue West). If this criteria can be met from the street, the rear lane does not need to meet the Fire Access Route standards.

https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_Emergency_Service_Policy.pdf

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont Avenue Revised Site Plan - OBC Access Route Design - Fire Lane Decreased Dimemsions - Horse in the Cart Procedure

Hello Garett,

I have recently taken a deep look into the new documents submitted for the 660 Belmont Avenue zone change application has raised two design concerns and some procedural observations.

The first concern is with the revised site plan found in this folder respect to the requirements of The Ontario Building Code | Access Route Design. Specifically, I look at this map of the publicly owned Belmont Lane East and find extant

dimensions to be a width of 30 feet with a 10 by 10 foot 45 degree 14.12 foot diagonal corner cut out. In the revised application the easterly side width is reduced to 8.65 meters (27.75 feet), the southerly side with is reduced to 6.10 meters (20.00 feet) with a bollard on the diagonal that will not permit any front or middle of vehicle curb overrun. The new drawings page 6 (Truck Movement) for a mid size delivery truck, and page 7 (Car Movement) exhibit tight turning radii due to the developer's proposed privately owned lane reductions of 2.75 feet on the east side and 10 feet on the south side. I note there is no drawing for Fire Vehicle Movement or for a 53 foot trailer and tractor in this new document set. I remind you the Ontario Building Code provides the minimum acceptable standards and from the new documents I can not readily see if the proposed lane geometry meets or exceeds Access Route Design standards. Has the Fire Department reviewed these new documents and confirmed that the largest fire vehicles will be able to easily navigate through this newly proposed lane geometry? Will these reduced widths impact the fire insurance cost for upper floor tenants and their potential safety, and permit goods delivery via a maximum legal sized transport truck throughout the rear and side of the lane and whole Belmont Lane East?

A second concern I have deals with large fire vehicles and the extended width of stabilizer, pads and load bearing capacity of the proposed parking garage underneath the lane and ease . A large fire vehicle with extended stabilizers supported on four load distribution pads has an overall width of about 7.5 meters. A 30 tonne ladder truck supported on its four stabilizer will have point loading of approximately 5 tonnes on each front pad and 10 tonnes on each rear pad. Has the Planning Department confirmed that the developer's proposal plans will support the operational width and physical mass of the largest available ladder truck?

The existing Belmont Lane East has ample width and turning radii and to be deemed purchasable by a developer has to become a privately owned lane that has reduced widths of 2.25 and 10 feet. I find concerning in two ways. Prior to the sale of the lane the City and its concerned citizens spend tremendous efforts reviewing and commenting on the developers proposal, a proposal that is only contingent upon the developer actually securing title to the lane and the City obtaining and easement for the lane. It seems to me that the *Horse(property title)* has been put into the *Cart(highrise*) and without the *Horse* before the *Cart* effective and efficient progress is impeded. That is to say there should sufficient time for the public to review and comment on any posited privatization prior to any public land sale well before any potential development application is deemed acceptable. Is it proper or legal for the City to accept a formal Zone Change Application that 1) to meet the developer's intentions has to assume prior privatization of an existing publicly owned lane, 2) de facto acceptance of a reduced the width easement on a public lane not titled by the applicant, and 3) not provide sufficient public and city council notice of a potential public lane sale before voting on a Zone Change Application contingent upon legal title change to and easement on said lane?

Respectfully,

RECEIVED
SEP - 8 2020
CITY OF KITCHENER

Dear Juliana Von Westerholt.

Recently, a neighbour informed me of the application for a zoning amendment to 660 Belmont Avenue, currently Dettmer Tire. My understanding is the property is currently zone H, which means a maximum 8 storey building. The amendment is proposing a 13 storey building.

The current by-law requires those within a 1000 ft. radius to be notified. I feel it should be a wider radius. I would have liked to have been notified.

I'm concerned and alarmed with the speed and transformation of development in Kitchener/Waterloo. The building being proposed is wildly out of proportion with the buildings in Belmont Village — even an 8 storey building will be an eyesore. In a time where housing costs are increasingly out of reach for most people, this building is not an affordable housing building. It will no doubt bring more people to Belmont Village, so local businesses will be unopposed. I suspect the usual barter for a few affordable housing units in exchange for a few extra floors will take place.

I've lived in many places in this country, in big cities and small villages. I like the KW area because it's a small city area with farming communities close by. It's well known for its community involvement. If this massive growth and push for high end/high density housing persists, we're going to lose the heart of our communities. The midtown area is quickly transforming into a monoculture where only the well off can afford to live.

A lot of people in my neighbourhood are upset by the erosion of their community. They feel powerless and will not respond to you or city council because it's pointless. Money wins. When you shove this kind of high end high density housing into a neighbourhood, the community fragments. People become less kind as a result.

I would like to see greater diversity and development on a <u>human</u> scale. When people are secure in housing, food and friendships, you have a much safer city.

I am opposed to this amendment.

Subject: [EXTERNAL] What We Heard Summary regarding 660 Belmont Ave.

Follow Up Flag: Follow up
Flag Status: Flagged

The current 'What We Heard Summary' is disappointing. You've received a lot of feedback about the proposed development at 660 Belmont Ave., both at the December NIM, and from mail, email, texts, etc. This summary is cursory at best. It doesn't look like you've devoted much consideration to the concerns of the community. From 81 comments (according to your summary, presumably from the December NIM) you've chosen the top 15 based on frequency. People have put a lot of thought and care into their concerns. We will have to live with the consequences of this development for a very long time, should it proceed. You are being disrespectful by reducing our concerns to 15 speech balloons.

Participants of the December NIM were led to believe they would be receiving comprehensive documentation of the NIM; ie., questions and answers, narratives by city staff and the developer's consulting team. Also, they understood they would receive supplementary information to round out the questions that weren't adequately responded to due to time constraints. None of this was included.

Urban development has an unfortunate history of racing headlong into the latest fad, often to discover much later that it is dysfunctional. The impacts of intensification on services and infrastructure have never been properly studied.

Smart cities are realizing that engaging the broader public in the city-making process leads to better answers and a deeper public ownership of our future. Even something obvious such as the right to sunlight and views has not been embraced by our Country. According to 'Canadian Architect', foreign planners and architects are astonished that a country this large and open does not enshrine solar access rights in its planning framework.

I urge you to stop blindly following the developers and start leading. We have an opportunity to create an inclusive, innovative, and integrative space. As they discovered much too late in Vancouver, increasing allowable density only reduces affordability.

> By far the greatest and most

Subject: [EXTERNAL] Regarding 660 Belmont Ave.

We all know what a good street looks like. We know how it feels to be in a community that is welcoming. It's always on a human scale-we feel that intuitively.
It feels friendly, diverse, interesting. It's welcoming to pedestrians, cyclists, people in wheelchairs. We feel like we fit into it.
Bigger isn't better. A survey cited by the CBC reported that those living in buildings taller than five storeys had significantly higher difficulty in making friends, felt less welcome in their neighbourhood, were less likely to know their neighbours, and were more likely to avoid interaction with strangers than those who lived in other types of buildings. They were far more likely to be younger people.
We need to create and enhance good neighbourhoods. We need to stop relentlessly pursuing greed against the collective good of a community. We need diverse housing, parks, creative architecture, and cultural spaces. More places that cut through the alienation so many are feeling.
I suspect a lot of people would have supported this project if it had been attractive, no more than five floors, and half the units were permanently dedicated to affordable housing.
We can't afford to have protracted battles development by development. A moratorium on future development in this area needs to take place.
The City and the Region need to seriously rethink how to deal with growth. Unaffordable housing and high density is happening all over Canada. It's led to greater homelessness, overcrowding, and fear.
Letting developers lead the way is not the answer. I urge planners and Councillors to take the lead before it's too late.
Sincerely,

Garett Stevenson

Hello
I write regarding the document *What We Heard* forwarded by Juliane von Westerholt on Friday February 19, 2010. This report was received some **nine** weeks after the meeting being reported on and **three** business days before the next scheduled meeting.

It is disconcerting to note that the results of that December 17, 2020 meeting -with 81 attendees, 59 circulation [?] and 23 post-meeting comments received were summarized into 15 cartoon captions.
The three larger narrative sections titled **Height; Community Character; Provision of Affordable Housing; Sun/Shadow and Wind Impacts** and **Traffic and Parking Concerns** were disappointing.
They merely repeated or re-phrased the cartoon captions.
The three blank narrative sections were again disheartening in that the final section **Other Comments** referred to "numerous other comments" which appear to have been ignored.

The spelling and grammatical errors are indicative of the lack of care and attention to detail which were given to this report and serve to questions the report's credibility.
It is an embarrassment to the City.

COVID concerns aside, we as citizens of Kitchener deserve better.

Garett Stevenson

Subject: [EXTERNAL] Regional growth

I've lived in Kitchener for over 20 years. This region is renowned for its community spirit. It has a lot to offer the resident and visitor. I've always felt welcome and comfortable.

Lately, however, I feel our region is failing its citizens. I feel bullied. I feel lied to. I feel powerless. We've allowed our cities to become unaffordable. Rampant growth has destroyed small mutually supportive communities where people felt safe, relied on one another, and could afford their home. Anyone renting an apartment in a house or low rise building no doubt lives with constant uncertainty and anxiety that their block is next to be razed by developers.

In my neighbourhood I'm appalled at the behaviour of realtors and people house- hunting in the area. They have targeted senior citizens. They are being continually harassed, mostly by phone and flyers. They've been told it's time they sell their house and move into an old age home; that they're taking up room that is meant for a family; some have been sent photos of their house with a sold sign across it as incentive to move. It's a cruel way to treat people. They tell me that they feel as if they're not supposed to enjoy their own home. One of my older friends said he felt he had lived too long and was taking up precious space. He felt as if he had no value - and the pandemic only exacerbated the feeling.

We are making the same mistakes everyone else is. The latest trend, set by developers, is to build tall high density luxury condos. Put in a floor with some greenery and barbecues and call it a community. The result is the same everywhere - unafforadability, increased homelessness, overcrowding, fear. The tall buildings are the same everywhere. They're unhealthy for people, block much needed sun, are alienating for the inhabitants, create wind tunnels, etc. The studies are all the same, and yet we continue because we don't know what else to do. Any opposition and we're told we're too set in our ways, change is difficult, and we're anti-growth.

If growth means homelessness, despair, cruelty, and a monoculture of the well off to the exclusion of everyone else, then yes, I'm anti-growth.

The phrase 'smart city' gets bandied about a lot lately. It usually means fewer cars, better transit, lots of bikes, communities that find unique ways to support the less fortunate and marginalized. These are all commendable, and we try to do this here to some degree.

We have to do better. The Region, the Municipalities, the Townships, need to halt growth immediately. You all need to get together and respectfully invite representatives from the Mennonite Community and the First Nations Community to discuss our future growth. I suspect their suggestions will be more thoughtful, equitable, environmentally sensitive, and humane than anything a developer can come up with.

The pandemic has put our neighbourhoods in a vulnerable position. Don't let developers take advantage of our precarious situation.

I live near Belmont Village and the ill-thought out blob proposed for Glasgow/Belmont is an obvious example of why we need to stop and do better.

I know the solutions to housing are very complex and very challenging. That is why I think it is imperative to stop and think very hard about the kind of community we want to be.

This isn't the time to follow what we know doesn't work. Please lead.

Sincerely,

36 Gildner St.
Kitchener

Subject: RE: [EXTERNAL] Fwd:

Hello,

I am following up on your questions regarding the consideration of sale of the laneway. No commitments have been made to sell the lane.

The decision of whether or not to sell Belmont Lane will be determined by Kitchener City Council. Generally, the process for sell City-owned land is as follows:

- A potential purchaser contacts the City of Kitchener with a request to the purchase land
- City internally circulates the request to City Departments to determine if the land is to be retained or if it could be sold
- If the lands are required to be retained (current/future City use, infrastructure) the applicant is advised that the request cannot proceed
- If the City deems that the land is surplus and can be sold to the applicant subject to Council approval then the following takes place:
    - The City engages an AACI Appraiser to value the land
    - A Staff report is prepared recommending the land be declared surplus, notice be given to close the road and staff be directed to negotiate the sale of the land to the applicant at a price which shall be the Fair Market Value including any conditions
    - The Staff Report is tabled at a public meeting of Council where the public can provide their input regarding the sale – in this case the development applications and lane sale would be the same staff report so no timing is known at this time
    - Public notification is typically through the Staff Report and the agenda and meeting date posted on the City's website – in this case everyone who participated in the process will be made aware of any public meetings on these applications
    - Council will vote on the request and if they agree to sell the land will enter into an Agreement of Purchase with the applicant
    - On the closing date the applicant will provide the City with the sale proceeds and title will be transferred to the applicant

We have received a revised site plan that shows greater detail of how the loading is proposed to function. I have uploaded that document to the City's Fileshare program. This plan is still under review and has not been approved.

Re 660 Belmont Ave.laneway

Greetings,

With the planned development proposed for 660 Belmont Ave, I assume that the public laneway (public thorough- fare) behind the current edifices will be absorbed by the developers What process will the City undertake to close the ' street' in order to sell ? Assume it will have to be declared 'surplus land" before being put up for sale(auction)?

Will this be advertised in the Record ? Has there been any 'unoffical promises 'made on these lands to the developer (s)? Is there a time frame to review this city -owned land & what are the criteria to deem them surplus?
The 660 Belmont development propsal states that there will be commerical on the ground floor - so how would delivery trucks have access for the commerical establishments?

Looking forward to your responses.

Regards

Hello,

The lane purchase request was submitted on July 31, 2019.

The fair market value is based on an independent appraisal. As you note, land values have changed and the value would be based on a current appraisal should the lane be sold.

Thanks,

Garett

Hello Garett
Thank you for agreeing to provide me with details of the date and letter in which the developer indicated that he wanted to purchase Belmont Lane.
Further, will the fair market value of Belmont Lane be based on the date of the above letter, the date of his formal "offer to purchase" or the date his development proposal is submitted to Council?
I realize that these values could differ significantly.
Thank you in advance for your help.

The mad rush toward unchecked urban growth in Waterloo Region has left a lot of us in a state of deep concern. The unease that's afflicting us is the result of watching our community succumb to rampant greed and hubris. When a business model is the template for shaping our region it's inevitable that a lot of harm will ensue.

The obsession with wealth, the thoughtless opportunism, the careless demolition of our history, our neighbourhoods, and, consequently, our well-being has left us feeling patronized, angry, and defeated.

Our concerns, which have been echoed and ignored time and again: 'It's out of character with the neighbourhood, it's too high, it's overwhelming and will set a precedent for future development, it's ugly, it casts a lot of shade, trees will come down, green space is threatened, no green space is being added, there's no parking, there will be more noise and traffic, the building is unenvironmental, there's too much glass and concrete, no thought of net zero design, the size of the units is based on investors and speculators-not reality, it's largely unaffordable, there's no consideration of our natural resources, high-rise/high density damages communities and the people who live in them, etc..., are met by the majority of Regional and City Councillors with imperious disregard. The subtext is that we're too set in our ways and don't recognize progress when we see it.

This ill conceived, poorly planned, heedless destruction, and our natural reaction to it is not specific to Waterloo Region. We need only look to London, Hamilton, and Toronto to see the same thoughtless unchecked growth.

A sampling of reactions to development:

> Monuments to greed.
> Redevelopment thy name is ugly.
> They are all garbage, no planning for humans involved. All about profit.
> Tear it down.
> Architectural viagra.
> A cultural crime scene in which architecture itself has been murdered.
> Our dystopian present.
> Though I understand why corporate capitalists with no sense of aesthetics want to build ugly buildings like this (because they're cheap), I will never understand the architects who design them. This is what they want to put into the world and be their legacy? I'd be too ashamed.
> You want to see ugly architorture? Come to Toronto. The world's visual mongrel.
> The sky is the limit of stupidity.
> We're all screaming into the void about this.

These comments are by people who live in Manhattan (and one from Toronto). They are accustomed to high density housing. Their reactions echo our reactions. It's not us, it's you.

The late, great Tony Judt, in his book, 'Ill Fares The Land', pinpoints some of the problems we face:
'... doctrines purporting with alarming confidence to say what the state should do and remind individuals-forcibly if necessary-that the state knows what is good for them.'

'What is it that offends our sense of propriety when faced with unrestrained lobbying by the wealthy at the expense of everyone else? What have we lost? We should be much angrier than we are.'

'...above all, the rhetoric that accompanied these: uncritical admiration for unfettered markets, disdain for the public sector, the delusion of endless growth.'

There are cities and countries that do a much better job when it comes to urban planning and growth. Look to Vienna, Barcelona, Copenhagen, and Finland for inspiration, knowledge, and positive direction.

Here in Kitchener, we are facing development proposals that are obnoxious in scale, ugly in design, and show little to no evidence of environmental responsibility. They have all the appeal of a Soviet subdivision.

The proposal at 660 Belmont has been met with opposition for all the reasons I have sited. The modifications to the building change none of the concerns. The rest of the village will certainly be threatened if this goes ahead.

The same can be said for the behemoth proposal at Victoria and Park Street. Both this and 660 Belmont are projects that deal a lethal blow to the spirit of our community.

Thoughtful development would mean restraint, grace, inclusivity, and humility. Has anyone ever associated those words with any recent development?

The City Council will listen to our concerns, because they must. The majority of Councillors will then plough ahead with more development.

Are we, like the Manhattanites, all screaming into the void?

I think we can do much better.

Hello,

Thank you for your comments. I want to clarify that no decision has been made on the potential sale of Belmont Lane East and consideration of the potential sale must and will be considered in a public Council meeting where members of the public can attend and participate in the discussion. Any interested person can register as a delegation and speak to the potential sale before any decision is made.

When the lane sale is scheduled for consideration, written notice will be provided to everyone who provided comment on the 660 Belmont Avenue West OPA/ZBA application, there will be a notice in the newspaper, and the City's website will be updated (www.kitchener.ca/planningapplications).

We have had discussions on the potential sale of Belmont Lane East at the second Neighbourhood Meeting, in the ten small group meetings that followed, and there is information on the potential lane sale in the Comprehensive Engagement Report I prepared and posted online. That report summaries the feedback and provides responses to the questions posed during the Neighbourhood Meetings, the ten small group meeting, and the site walk that was organized by FOBV. The report can be found here - https://app2.kitchener.ca/AppDocs/OpenData/AMANDADataSets/593437_Comprehensive%20Engagement%20Report%20-%20660%20Belmont%20Avenue%20West.pdf

All the best to you and your family this holiday season.

Thanks,

Garett

Dear Garett Stevenson,

Why is the proposed purchase by the Zehr Group of the publicly owned lane way - the portion of Belmont lane east from the south entrance off of Belmont to Claremont Ave. - being kept secret from the public?

This process should be transparent. The citizens of Kitchener have a right to not only be informed and consulted on the sale of publicly owned land, but we also have the right to know the process and criteria for determining the status of city owned land.

Councillors should not be meeting in camera for such precedent setting decisions.

Disturbingly, the latest 660 Belmont proposal, which is largely insubstantial in it requested amendments for height, and size, and aesthetics, and affordability, and compatibility with the community, and environmental effects on the park, and adherence to existing zoning...but, I digress, contains no reference to the lane way whatsoever.

What are we to make of this? Why the secrecy? What's the rush in making rash decisions to appease developers? Why is there such a lack of care or responsibility to the citizens of Kitchener?

I'm very disappointed.

We live here. We have a right to be part of the decision making process of our future.

Please include us. Please respect us.

Sincerely,

Changes to Belmont Village condo tower aren't enough

Re: Local developer cuts height of condo tower — Nov. 6

In this article, Don Zehr, CEO of Zehr Group, describes himself as the BFF (best friend forever) of Belmont Village.

Zac Zehr, the company's vice-president of development, says: "Our goal is to accommodate the residents' concerns while providing a beautiful, smart and sustainable building."

I know beauty is in the eye of the beholder, but this bulky, lumbering heft of a building is anything but sympathetic to Belmont Village.

The structure will continue to block much-needed sunlight for the trees and vegetable gardens on Gildner Green.

This is hardly surprising when the height of the proposed building is nearly double the zoning bylaw allowance.

As for pedestrians, walking beside this inelegant barge of an edifice will result in a feeling of oppression; domination is all.

The company has donated $250,000 to Menno Homes, a non-profit organization that builds affordable housing. While commendable, this should be a mandatory requirement for all developers which neglect to provide our cities with affordable housing.

Please, a significantly smaller, graceful, attractive building that is sympathetic to Belmont Village would work best.

For inspiration, look to Hamilton's Locke Street area as an example of how new and old design in a genial, quirky collection of residents and businesses work well together.

Hi Juliane:

I wanted to follow-up with you about the 660 Belmont Proposal.
(I apologize for the delay getting this to you - I would have preferred an extra week considering the time was over the extended Christmas break....)

We are not in favour of the proposed project as follows;

1 - Massing

At 13 stories the proposed building is too high compared to other neighbouring buildings in the Belmont Village block, which are ~ 2 stories high or less.

I have attached a few mock-up views showing the comparison.

Such a tall building would wreck the atmosphere of Belmont Village, especially once other similar tall buildings are added along the block.

I think 6 - 8 stories would be more suitable.

2 - Traffic

We are concerned that there will be increased traffic that uses the "cut through" down Earl Street and Rock Street, to avoid the lights at Belmont and Glasgow.

This was mentioned at the Zoom meeting - is there a proposed resolution to this?

3 - Location to Transit

The location of 660 Belmont is approximately 1000 m walking distance from the closest ION station.

This would seem to be too far for someone who regularly commutes, to walk to the Ion station.

Why not encourage higher density close to the Ion line, so that it can be conveniently used by commuters?

I suggest that a high density building at 660 Belmont, prevents one from being economically viable at another more suitable location near the Ion line.

4 - Parking

The proposal adds 163 residences to the area.

Currently I count 94 residences in the Glascow-Avondale-Union-Belmont block.

This will create more parking pressures in the area, and traffic in the area.

If 1 or 2 similar high rise units are added in the block to the north of 660 Belmont in the future, the effect will be multiplied.

5 - Green Spaces

There are limited green spaces in the area.

Adding many new residences in the area will increase the pressures on the small green spaces.

5 - Future Development - Overall Plan for Belmont Village

If the same pattern is used for the rest of Belmont village, it will not be a quant "village" anymore.

Has the City studied how Belmont Village should be best developed?

6 - Construction

Has there been any discussions on how the construction would proceed, and specifically whether the construction would require any closure of Belmont Street or the Iron Horse Trail?

I use the trail regularly and I am concerned it will be un-necessarily closed because of construction.

Please contact me if you have any questions.

Thank you

20 Earl Street

Follow Up Flag: Follow up
Flag Status: Flagged

Hello,

I am assisting Juliane with responding to the email questions received to date.

I am following up on your questions regarding the consideration of sale of the laneway. No commitments have been made to sell the lane.

It was noted that the potential lane purchase was not addressed during the December meeting, so Planning staff wanted to make sure to present the lane purchase request at the second meeting.

The development applications were deemed as complete as all required studies were provided. The risk of the applications proceeding without certainty of the lane purchase is at the risk of the developer.

The decision of whether or not to sell Belmont Lane will be determined by Kitchener City Council. Generally, the process for sell City-owned land is as follows:

- A potential purchaser contacts the City of Kitchener with a request to the purchase land
- City internally circulates the request to City Departments to determine if the land is to be retained or if it could be sold
- If the lands are required to be retained (current/future City use, infrastructure) the applicant is advised that the request cannot proceed
- If the City deems that the land is surplus and can be sold to the applicant subject to Council approval then the following takes place:
    - The City engages an AACI Appraiser to value the land
    - A Staff report is prepared recommending the land be declared surplus, notice be given to close the road and staff be directed to negotiate the sale of the land to the applicant at a price which shall be the Fair Market Value including any conditions
    - The Staff Report is tabled at a public meeting of Council where the public can provide their input regarding the sale – in this case the development applications and lane sale would be the same staff report so no timing is known at this time
    - Public notification is typically through the Staff Report and the agenda and meeting date posted on the City's website – in this case everyone who participated in the process will be made aware of any public meetings on these applications
    - Council will vote on the request and if they agree to sell the land will enter into an Agreement of Purchase with the applicant
    - On the closing date the applicant will provide the City with the sale proceeds and title will be transferred to the applicant

Thanks,

Garett

Subject: [EXTERNAL] RE: 660 Belmont - Seeking Clarification on a few points - Belmont Lane East

Hello Juliane & Rosa,

I was recently made aware that, in order for the proposed development at 660 Belmont to happen as laid out, the developer would need to acquire a portion of Belmont Lane East. If this indeed correct, I have a few points I would you invite either of you to clarify:

1. Why was this potential sale not divulged (and made respectfully transparent to community members) at the Dec 17th NIM meeting? I attended this meeting in its entirety and did not hear this mentioned once.
2. Is it standard procedure for a developer to submit an application that is incomplete – where the parcel has not been fully assembled to create the required footprint to support the proposed development?
3. Is it standard procedure for the planning department to use their resources to work with a developer who has submitted an incomplete application? If it is, I would consider this an inefficient use of the planning department's resources, not to mention tax dollars.
4. Why would a developer spend time and resources pursuing an incomplete application in the absence of some understanding that this land could be made available to them so that their required parcel could be assembled?
5. How is the sale of land (such as the portion of Belmont Lane East) communicated to the public at large? When might we be made aware of its sale and/or conditions of sale?
6. What assurances can you offer me that there is a transparent policy in place to alert the public to the conditions surrounding this sale and similar sales of public lands?

Thank you for your attention to the above.
Sincerely,

20 Earl St.

Hello Mr. Stevenson,

I hope this email finds you well.
I have pasted in an earlier inquiry made to both Rosa and Juliane.
As I have received no response, I am passing this along to you. I am scheduled for a small meeting group with you on March 19th and would certainly like to pursue these questions further. However, look forward to any information you are able to reply prior to this meeting so that we are both as up to date as possible.
Thanks,

Hello,

I look forward to working together with you and members of the community to ensure there is balanced dialogue regarding these applications. As a Planner, in addition to the specific comments and feedback I am hearing, I must also consider the broader public interest when making recommendations to Council.

I certainly appreciate your comments at the meeting that you are spending a lot of time learning about planning and other matters arising from this application. I am happy to help provide clarifications and answers to your questions.

Thanks,

Garett

Hello Garrett,

Thank you for your time today.
I want to say again that my frustrations lie with the process itself and not with you personally. I should also add that I was involved in a similar situation when I lived in the Victoria Park area several years ago and it took a lot of my time and energy – I'm getting worn out! Things do not seem to have changed much which is discouraging to me. My hope is that the developer, who lives in this community, will be open to mediating a mutually agreeable solution.

I do have one follow up question however... You made the comment that "the other sessions were better than this one". I understand that they were better attended but how else were they better? What was amiss in our session today (Friday)? I do feel strongly about this situation and, honestly, feel like the people working for me should be working for me. I grew up with parents who both represented their community as elected officials when I was growing up and that has left a strong civic impression on me.

Have a nice weekend,

Thanks, Juliane.

I have made just a very quick read of your email.

Are you telling me that there will be another Neighbourhood Information Meeting opportunity before this proposal is presented to the Planning and Strategic Initiative Committee?

From my recollection, I do not recall mention of the Planning and Strategic Initiative Committee meeting being outlined in the process that has been described to date. My apologies if I have missed this.

In light of the concerns that I personally have heard from a variety of neighbours, I think that a second NIM would be very helpful in informing residents of the perspectives of other residents, the applicant and City staff.

While staff fielding questions from residents on a one-to-one basis will be helpful to both staff and residents, the "town hall" meeting approach is very helpful and efficient for neighbourhood communication – especially in these COVID times when group dialogue opportunities are extremely limited.

Regardless of whether the NIM is deemed to be a Statutory meeting or not, I think it is important to recognize that the announcement communications for tonight's meeting have been very poorly managed. I expect that few, if any, of the letters mailed to property owners were delivered before Tuesday, December 15th – the day after the deadline that you had established for people to advise you that they wished to attend tonight's meeting. The posting of the meeting details on the 660 Belmont site sign also happened far too late to be effective in notifying people of the meeting – especially in these COVID times when very few people are out walking.

Thank you for clarifying the process.

Sincerely,

Subject: RE: RE: Invite to the Zoom Meeting for 66o Belmont Ave Tomorrow evening

Good Afternoon

Thank you for your email.

You are correct that Notice of Public meetings that are statutory meetings require 20 days notice under the Planning Act.

I want to explain that this neighbourhood information meeting is not a Statutory meeting under the Planning Act and is, in fact, intended to be a less formal meeting to introduce the applications to the community and provide an initial opportunity to inform the community and obtain feedback. Typically, staff gives about 2 weeks' notice by letter and this is accompanied by an email notice to those who have already connected with staff.

This is not the last opportunity for public engagement. You will have additional opportunities to discuss your concerns with staff. In fact, the City often has other meetings with residents to try to address community concerns.

When the application is ready to be formally considered, the statutory meeting is held at the Planning and Strategic Initiative Committee. At that time the Planning Act requirements regarding notice are strictly adhered to.

I really hope I have been able to address your question. Thank you.

Sincerely,

Sincerely,

Juliane von Westerholt , Senior Planner| Planning Division | City of Kitchener

Subject: [EXTERNAL] RE: Invite to the Zoom Meeting for 66o Belmont Ave Tomorrow evening

Good morning, Juliane.

It has come to my attention that the Planning Act requirement for notice of "Public Planning Meetings" is at least 20 days before the meeting date.

In the case of the 660 Belmont Ave W development proposal, the notice period could be deemed to be, at best, 13 days ahead of the scheduled meeting – based on the date of the invitation letter that announced the meeting.

However, I have learned today that several neighbours in the Rock Ave / Earl St area did not receive the mailed notice of the meeting until yesterday (December 15th) – two days ahead of the meeting, and a day after your deadline for receiving RSVPs from those who wish to attend the meeting. This included at least one resident who had not sent you any comments in response to the letter issued in August.

We also know that the sign on the 660 Belmont Ave W site was not updated with the notice of the December 17th meeting until last Friday, December 11th - less than a week before the meeting.

Given that notice of the meeting was not in place, through any of the channels, early enough to satisfy the "at least 20 days" statutory requirement, why is this meeting proceeding on Thursday?

I respectfully suggest that the meeting be re-scheduled to an early January date, with appropriate new announcements through all channels, in order to provide adequate advance notice to all who wish to participate.

Sincerely,

Juliane, in addition to the "What We Heard" document, please also share, by posting on the City's website, the following:

- audio recording of last night's meeting
- full details of the questions recorded on-line by participants
- full details of the comments recorded in the chat forum that was running alongside the meeting
- the video presentations that were played during the meeting

I understand that a 3-D model of the proposed building and neighbouring properties was to be developed as part of the application for amendments process. Please arrange to have a video (or a series of photos?) made of that model and post it on the city's website. I believe that being able to see the model will give many people a much better sense of the scale of this building and how it relates to the surrounding sites.

Observations about the meeting

We found it hard to keep up with the flow of conversations during the meeting.

I believe that the moderator reported that 71 "people" were connected for the meeting. Can you confirm that this number excludes the applicant & his team of consultants and city staff?

Deb and I shared one connection to the meeting (under Deb's name) and I expect that many other neighbours did the same.

My guess is that the number of residents/neighbours actually connected last night probably exceeded 100.

Given the challenges presented to people who do not know how to use Zoom, I think that this number of residents "attending" represents a very strong sense of concern from the neighbourhood.

With the meeting being limited to just 90 minutes, it is not surprising that there was clearly not enough time to adequately address all of the questions raised.

When I asked a few days ago for an agenda for the meeting, in advance, I was hoping to get an understanding of how the meeting would be conducted. It was unfortunate that this request was not honoured.

Frankly, I was both surprised and disappointed that we were not afforded an opportunity to actually speak to the gathering and to hear other participants raising questions in their own voice. I understand that this would have been a major technical hurdle to overcome, but asking the moderator to read the questions, and then relay his understanding of them to the panel members, severely filtered and limited the dialogue. The frustration that arose from this approach was clearly evident in the comments posted in the chat forum that was running alongside the meeting.

It would have been helpful to know, ahead of time, that we would only be allowed to submit written questions to the moderator. Instead we had to spend time typing and posting questions after the meeting had started, when our time would have been better spent listening attentively and absorbing the presentations and responses from the panel members.

The conduct of these meetings, which I expect that we will need to run in a similar fashion for many more months, needs to be improved as we learn more about the weaknesses that this approach presents. We are all learning from these activities, but we need a commitment that the flow of information from and to residents will not be severely hampered.

Feel free to call me if you have any questions.

Thank you for your assistance.

Sincerely,

Good afternoon, Juliane.

I have some observations and requests regarding the material you have shared in your Dec 23rd email (below).

I ask that you please provide clarification on these points this week, so that we can then submit comments and questions prior to January 11th.

1. The Parking Study and TDM Plan document was posted to the Share File site as a "SECURED" document, which prevents readers from printing it. While I would prefer to receive information on-line, trying to review a 53 page document that contains specialized terminology, is, at best difficult.

   Please advise how I can print this document or arrange to have the secured feature disabled and the document then re-posted to the Share File site.

2. The Official Plan Amendment Application document, as currently posted on the Share File site, is still missing pages 2, 4, 6 & 8. You will recall that I brought this to your attention in my email to you on September 10th when I asked that the complete document be loaded to the Share File site.

   Please arrange to have the complete OPA Application document posted on the Share File site so that everyone who has been granted access to that site can see it, in its entirety.

Tree Management Plan

3. In reviewing this document, prepared by the applicant's consultants, I noticed that there are five "Monitoring Wells" located on the site.

   The existence of these wells is not mentioned in either of the two "Phase One Environmental Site Assessment" reports.

   a. When were these wells placed on the site?
   b. Why were the wells installed?
   c. Who installed the wells?
   d. Who is monitoring the wells?
   e. What reports have been provided regarding the results of this monitoring effort?

4. Regarding the tree management plan, has this document been reviewed by City Forestry staff? If so, please share their findings.

Questions not yet answered from my December 18th email to you

5. Please advise why you have decided not to share the audio recording of the NIM meeting, that was announced at the start of the meeting.

6. Please confirm that all of the questions recorded on-line by participants during the NIM will be shared in the report to be issued after January 11th.

7. Please confirm that the full details of the comments recorded in the chat forum, that was running alongside the meeting, will be shared in the report to be issued after January 11th.

8. Please reply to the question that I raised regarding the 3-D model of the proposed building and neighbouring properties. I would like to see views of this model before January 11th.

Question arising following reviewing video presentation

9. Please refer to the attachment provided with this email. This shows a view of the "rear" of the proposed building.

   Why does this view not show:
   - the entrance to the ramp leading to the underground parking garage
   - the adjacent loading dock that serves one of the first floor commercial areas
   - the five barrier-free surface parking spaces immediately behind the building, and
   - the private roadway that will serve these areas.

   These are critical elements that will be present on the site.

   What we do see in this image is a variety of seating structures, overhead strings of lights, and trees of significant size - all positioned where the private roadway and/or the barrier-free parking would be.

   Please explain the apparent disconnects between the Site Plan (within Appendix C of the Planning Justification Report) and the image shown in the video presentation.

Proposed Purchase of Belmont Lane East by applicant

10. Has the City struck an agreement with the applicant to sell the portion of Belmont Lane East that runs along the East and South walls of the proposed building?

    If such a sale is made, will that section of Belmont Lane East become, in effect, a private roadway?

    Will that private roadway be connected to the remaining portion of Belmont Lane East (that extends north towards Union Boulevard)?

Thank you for your help in clarifying these matters.

Sincerely,

From: Juliane vonWesterholt [mailto:Juliane.vonWesterholt@kitchener.ca]

Subject: 660 Belmont

Dear Resident:

Thank you for participating in the virtual neighbourhood information meeting (NIM) for the 660 Belmont Application for Official Plan and Zoning By-law Amendments held on Thursday December 17th, 2020.

Here are the follow-up items from the meeting:

- Studies submitted with this application, as well as the video presentation from the applicant can be retrieved through this link.
- The City's website has been updated to include the presentation material from the meeting for your reference. Please note that this does not include a recording of the meeting, which was the original intention, as staff was not able to resolve the logistics regarding privacy procedures prior to hosting the meeting.
- Please share your comments and additional questions on the application by emailing me or calling me by January 11, 2021.
- Please share your general feedback on this meeting through this survey

After January 11th:

- I will prepare a summary of What We've Heard and forward it to you
- I will also include the answers to the questions raised at the NIM, as we were not able to answer all questions during the allotted time.

This was not your last opportunity to participate or provide me with comments. Staff will evaluate the feedback received to date and, in consultation with Councilor Johnston, will determine the next steps for engagement.

You are always welcome to call me at the number below if you wish to chat. I look forward to hearing from you soon. In the meantime, I would like to take this time to thank you once again for your interest in this file and wish you and your family Happy Holidays and a healthy and prosperous New Year in 2021!

Sincerely,

Juliane

Subject: [EXTERNAL] 660 Belmont - Bennett Family Concerns

660 Belmont – Bennett Family concerns

We are writing to express concerns with the proposed development at 660 Belmont Avenue West.

We have lived in our home on Belmont Avenue West, between Union and John, for over 36 years. Like many of our neighbours, who have also lived on our block for several decades, we appreciate the green spaces, mature trees, and services provided within walking distance. Belmont Village has a streetscape that other communities seek to emulate. It is a treasure of quaint shops, restaurants, and services that are appreciated by the locals and those living beyond our neighbourhood.

Sale of Belmont Lane East to developer

We strongly object to the sale of the Belmont Lane East lands to the developer.

This sale doesn't achieve any positives for the neighbourhood. The purchase of these lands is not being proposed in order to allow the developer to repurpose the lands (e.g. to allow the creation of more surface parking, to create green space or to improve the roadway).

Selling the lane property to the developer will facilitate the building of two floors of underground parking - a significant portion of which is proposed to be located under the Lane.

But more importantly, this sale will allow the building size to be increased significantly beyond what is otherwise allowable on the land on which the building will be situated.

Based on two recent statements regarding the lane, it is unclear whether the sale of this portion of the Lane will limit or deny the public from using the privately-owned portion of the lane, including accessing Belmont Ave W (between 660 Belmont and the Tim Horton's property).

"The Lane would remain as a **travelled roadway** in its current general alignment as part of the proposed development plan." (from the cover letter signed by Kevin Muir, Senior Planner with GSP Group Inc. that accompanied the package of OPA and ZBA applications and related documents).

In recent email correspondence, Juliane vonWesterholt was asked "...will that section of Belmont Lane East become, in effect, a private roadway?" Her response was "Yes, it would become a private roadway and not intended for public access."

The building is too tall

We are objecting to this development because we see it as the first step in the destruction of the appeal of Belmont Village. In our opinion, the scale of the building at 49 metres high is overly aggressive and it would set a very dangerous precedent for other developments that are bound to follow on Belmont between Glasgow and Union. One only has to refer to the City of Kitchener documentation on Tall Buildings and Developments to note that this proposed development does not reflect careful consideration for the neighbourhood.

We understand that more intensive use of land within the city is essential, if only to reduce the pressure to turn our precious farmland into a sea of winding streets populated with over-sized single-family residential properties on wide and deep lots.

We also understand the need to intensify the city's residential housing supply and we support the city's objective of doing so, primarily along the LRT and other major transit routes. However, there are ways to achieve those objectives without creating problems in nearby, long-established neighbourhoods.

We welcome change that improves quality of life for all income levels and supports accessibility for all. We appreciate the need to intensify the city's residential housing supply. These objectives can be achieved with an 8 storey building.

We urge the City to not exercise the option provided in the Official Plan (Section 15.D.4.23) whereby limitations in building height can be extended by up to 50%. It appears that the developer, in proposing the building design that has been published, is expecting council to exercise that option. In our opinion, we do not believe that the necessary criteria will be met and exercising the option will impose negative impacts on surrounding properties.

If the building were limited to 25 metres in height (seven or eight stories, depending on the ceiling heights for the various floors), the number of residential units on the site would increase from zero to 105 (seven residential floors with 15 units on each) thus clearly satisfying the need to increase the housing density.

No transitioning of height restrictions along Belmont Avenue West

Even if council were to limit the new building at 660 Belmont to a height of eight stories
(25 metres or less in height), which we believe is the direction that council should take, we are concerned that the current Official Plan and Zoning By-law would permit buildings of this height on all of the properties along the northeast side of Belmont between Glasgow and Union.
For example, the former Esso service station property (Union at Belmont) could see a very tall building (up to 25 metres) – directly across the road from a residential neighbourhood populated primarily with single family homes no more than two stories high.
This would not be a good strategy.

Urgent Need for a Planning Study of Belmont Village and an Interim Development Freeze, pending completion of the study and implementation of appropriate zoning

We have been advised that at least one other development company has been actively purchasing several properties on both sides of Belmont Avenue West.

In order to prevent the creation of a streetscape of tall buildings and a concrete canyon, and the destruction of Belmont Village, we urge the City to initiate a planning study for the entire Belmont Village area and to impose an interim control bylaw, halting developments until the recommendations from such a study are implemented.

Without a vision for future development of Belmont Village as a whole, and consultation with the neighbourhood residents and businesses, one-off development proposals for specific sites will lead to a patchwork of buildings that will destroy that which draws people to the village. A rush to push through Official Plan and Zoning By-law changes only benefits the developer.

Insufficient Parking Supply on Site

1. Underground Parking for Residents

The Planning Justification Report says that there will be a total of 131 spaces in the underground parking. This includes fourteen private garages (with space for two cars plus significant additional storage or activity space). This configuration effectively leaves only **103** (=131 less (14x2)) remaining underground spaces to serve 149 (163 less 14) residential units. This seems to be a **significant under-supply** of parking for residents living in the 149 units.

Given the nature of the building suites (higher ceilings, generous floor space, many private terraces & fourteen private two-car garages in the underground parking), we expect that the overall demand for parking in this building (compared to less expensive condos or rental apartments) will be higher. These owners will have more cars to park, even if they choose to walk, cycle or take transit for most of their local trips.

By building private two-car garages with storage space, the space otherwise available for underground parking spaces is reduced.

The underground parking floorplan currently shows only **one barrier free parking space**, which seems to be a very low supply for a building with this many residential units, especially given the weather that we experience in Canada. Is there an expectation that some of the five barrier-free surface parking spaces will be dedicated to residents of the building?

2. Surface Parking for First Floor Commercial Properties

The site plan currently shows 30 spaces of surface parking, including five barrier-free spaces (closest to the back door to the building).

It is unclear whether any of these spaces are intended to serve residents of the building or whether they are all intended to serve only customers and staff of the commercial properties.

We do not know the nature of the business that will occupy the commercial properties, so, at best, it is difficult to assess the demand for parking needed by their customers. However, if we assume that the businesses will have significant business volumes, we do not think that it is unreasonable for all 30 of the surface spaces (including the barrier free ones) to be occupied most of the time in business hours by business staff and customers. This would leave few, if any, parking spaces on the property to serve the needs of visitors to the residential units.

3. Parking Study and Transportation Demand Management Plan

Our read of this document raised the following concerns:

a. **Heavy reliance is placed on on-street parking, much of it in neighbouring residential areas** (both across the street from 660 Belmont and on the other side of the Iron Horse Trail), **to meet the new demand for visitor parking and/or customer parking for the commercial units.** The street parking in Westmount residential areas is already under pressure from customers/clients attending existing businesses and services in the Belmont Village. And if the patio feature that was implemented on Belmont between Claremont and Argyle this past summer is repeated in future summer periods, there will be even more pressure on on-street parking in residential areas.

   We feel that relying on these on-street parking spaces to meet the new parking demand created by a development is an inappropriate strategy. Other municipalities require customer parking and visitor parking to be accommodated either on a development site or on immediately adjacent on-street parking. We urge the City to adopt such a policy for all developments.

b. **The "Parking Study and Transportation Demand Management Plan" also does not address the impact of new traffic flows to and from this site on the Belmont Lane East entrances to Belmont Avenue West.** Getting onto Belmont Avenue West from Belmont Lane East (at any of the three intersections available) is already difficult at the best of times, especially if you are trying to turn left onto Belmont Avenue. Doing so at the intersection between Tim Hortons and 660 Belmont is even more difficult – to the point of being dangerous. This intersection is simply too close to the major intersection of Belmont and Glasgow to allow safe and efficient entry onto Belmont Avenue West.

   During the NIM, a statement was made that the traffic coming and going from the new development will actually be lower than what is currently generated by the customers of Dettmer Tirecraft. This expectation is simply ludicrous.

   We urge the city to revisit the question of expected traffic flow impacts created by this new development, including resident trips and the traffic generated by staff, customers and suppliers of the commercial properties.

   Please note that the City of Kitchener has yet to address ongoing traffic and parking concerns that have plagued Belmont Avenue between Union and John Streets. For many years, residents on our block of

Belmont Ave have repeatedly requested traffic calming measures. We are concerned that traffic concerns on Belmont Avenue, north of Union, will only be heightened with this proposed development and others that will no doubt follow suit.

Nature of the Residential Units

Will the residential units be sold as condominiums or will they be apartments for rent?

The cover letter for the OPA and ZBA applications package refers to them as *"163 residential units (condominiums)".*

However, on page 28 of the Planning Justification Report, in the section that analyses how the development will meet Housing issues (as defined in the 2020 Provincial Policy Statement, the 2019 Growth Plan for Greater Golden Horseshoe, Region of Waterloo Official Plan and City of Kitchener Official Plan) we note the following *"Concerning affordable housing, the proposed building does not include affordable housing that meets the City's defined housing benchmark. The proposed development, however, does assist with other housing objectives, including contributing to the rental housing stock and providing compact unit forms that cater to smaller households.*

Observations regarding Shadow Analysis

If you look carefully at the Shadow Analysis Graphics (Appendix A to the Urban Design Report), you will see that the building will cast new shadows far beyond 120 metres, impacting residences that did not receive the formal notice of the development (mailings made in August and early December).

For September 21, a graphic is presented to illustrate the shadow positions at 7:00 a.m. How are such shadows even possible when sunrise is at 7:09 a.m.?

For December 21st, a graphic is presented to illustrate the shadow positions at 8:30 a.m. However, the shadow extends beyond the border of the illustration, making it impossible to see how far the shadow extends.

We also note that graphics were not shown for significant periods when people are likely to be outdoors. For example, the last three hours (6 to 9 p.m.) before sunset on June 21st, the last two hours before sunset on September 21st and almost a full hour before sunset on December 21st.
We ask that these issues be addressed by publishing an amended Shadow Analysis.

Here are some additional observations drawn from the Shadow Analysis Graphics for two dates:

On June 21st, the longest day of the year, with sunrise at 5:41a.m. & sunset at 9:06 p.m.:

- At 6:00 a.m. the back yards of four homes on Avondale Ave will be in shade, as will be the front entrances of five homes on Earl Street
- Until 9:00 a.m. the building shadow will still cast all the way across Belmont Ave W
- By 3:00 p.m. (over six hours before sunset) the shadow will cover all of the site's surface parking and the portion of Belmont Lane East behind the building, and will start to cover the Iron Horse Trail

- By 5:00 p.m. (over four hours before sunset) the shadow will extend beyond the Iron Horse Trail and will cover a significant portion of the Gildner Green Park
- By 6:00 p.m. (over three hours before sunset) the shadow will extend beyond the Iron Horse Trail and will cover a significant portion of the Gildner Green Park
- We cannot confidently speak to the effects at 7:00 and 8:00 p.m. as no graphics for those hours were provided in the report; however, it is safe to say that the shadow will reach across the Iron Horse Trail (both above and below Glasgow Street), will continue to shade most of the lower portion of Gildner Green Park, as well as a significant area of the parking lot and entrances to the Catalyst building at 137 Glasgow Street

On December 21st, the shortest day of the year, with sunrise at 7:52a.m. & sunset at 4:49p.m.:

- At 8:30 a.m. the shadow reaches well above Union Blvd; perhaps it even reaches John St in Waterloo (the graphic for this hour shows that the shadow extends beyond the border of the illustration, making it impossible to see where the shadow ends); the shadow also fully covers Argyle Park and most of the adjacent parking lot.
- Until 9:00 a.m. the building shadow will still shade the back yards of three homes that face onto Union Blvd and cast all the way across Belmont Avenue West
- At 12:00 Noon (almost five hours before sunset) the shadow will cover all of the portion of Belmont Lane East behind the building to the north of 660 Belmont and will start to cover the Iron Horse Trail
- By 1:00 p.m. (almost four hours before sunset) the shadow will extend beyond the Iron Horse Trail and will cover the northern portion of the Gildner Green Park
- By 2:00 p.m. (almost three hours before sunset) the shadow extends across the Iron Horse Trail, the northern section of Gildner Green, a section of Eden Avenue and has started to impact residential properties along Wood Street.
- By 4:00 p.m. (almost one hour before sunset) the shadow has further extended impacting many residential properties on Wood Street as far as Park Street

Finally,
Public Notices regarding the development property

1. Formal notice of this proposed development was mailed only to addresses within 120 metres of the site, but many properties well beyond the 120 metre radius will be negatively impacted by this development proposal (e.g. increased traffic flow in residential neighbourhoods where the streets are not sized to take higher volumes, increased on-street parking demand in residential areas up to 200 meters or more from the development, reduced visibility to open sky and sunlight for many residential properties, the public parks, and the Iron Horse Trail).

   For all future communications, we encourage the City to expand the notification radius dramatically (to **at least** 200 metres) and to use the email mailing lists of the Cherry Park Neighbourhood Association and the Westmount Neighbourhood Association – both of which are recognized entities by the City of Kitchener. Our understanding is that neither of these organizations received formal notice of the development proposal.

2. We encourage the City to dispatch all future meeting notices well ahead of the statutory requirements. In these days of the pandemic, people are not likely to see notices posted on the sign on the 660 Belmont property, especially if they are posted late.

3. Notices mailed by Canada Post cannot be expected to be delivered in just a few days. (The Dec 4th letters were not delivered by Canada Post until 11 days after they were post-marked, which was just two days before the NIM.)

4. Given the significant level of participation at the first Neighbourhood Information Meeting, and the limited time available to answer the numerous questions submitted by participants, we strongly encourage the City to stage a follow-up NIM after the "What We Heard" document from the first NIM is circulated. We also encourage the City to post that document, and all other supporting documents, on the City's website so they are available for all to see.

Thank you for your attention to these concerns.

Subject: [EXTERNAL] Re: 660 Belmont 'What We Heard' Report

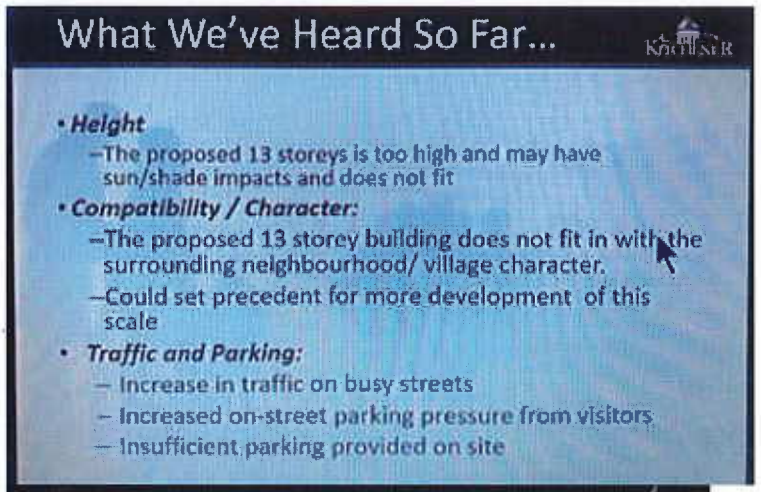
Follow Up Flag: Follow up
Flag Status: Flagged

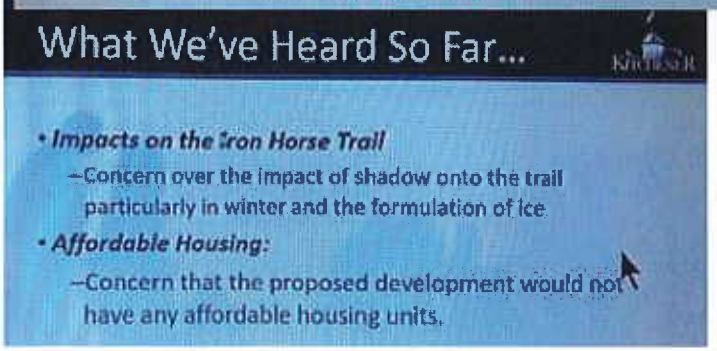
Dear Juliane,

We are so disappointed with the "What We Heard" report.

This document would be more aptly named, "What We Decided to Share, Again." It is an insult to the 81+ people who participated in the first NIM, and more particularly to those who asked questions and either got no answer during the NIM (because there was not enough time allotted) or an ill-informed or incomplete answer that was cobbled together, on the fly, by City staff or the developer's consulting team. In your letter to the community and the Zehr Group dated Dec 23, 2020, you committed to *"...prepare a summary of What We've Heard.... and will also include the answers to the questions raised at the NIM, as we were not able to answer all questions during the allotted time"*. Frankly, as a document created and issued by a professional planning team it is an embarrassment for the City.

We compared the 'What We Heard so Far...' presented at the first NIM on Dec 17th with the 'What We Heard' Report that was shared late Friday, Feb 19th - 2 months after that first NIM. The most recent document contained virtually no new information.





What We Were Expecting

In the absence of the audio recording of the NIM (that was promised to us at the start of the NIM), we were expecting to see a full documentation of the NIM - narratives delivered by City staff and the developer's consulting team, as well as all questions asked and answered during the NIM, along with supplementary information to round out the questions that could not be adequately answered during the NIM. These commitments were not honoured!

Beyond the first NIM, you invited comments and questions from the community. We expect that many wrote to you with questions evoked by the first NIM. In our case, we are still waiting for answers that you committed to provide. Post NIM questions and answers should also be shared, in a timely fashion, with the community.

Comparing 'What We Heard' to the 'Record of Pre-Submission Consultation Meeting'

When we think of the 25+ pages that the City staff assembled to document the Pre-Submission Consultation Meeting (held Sept 24, 2019) we come away with a sense that far more time was devoted to support the developer's submission of the OPA and ZBA amendment applications compared to support provided to citizens who are asking questions and raising concerns about the proposal. It appears that the Planning Department is controlling the narrative.

We are looking forward to Thursday evening's second NIM.

Subject: [EXTERNAL] RE: RE: 660 Belmont - Parking Study and TDM Plan document

Thanks, Garett.

When do you expect to secure, and post to the ShareFile site, the Phase II ESA for the western parcel at 660 Belmont?

Thank you for posting the updated Site Plan. It shows a very different picture of the site, compared to what was included in the Planning Justification Report submitted in July 2020 with the OPA and ZBA applications and supporting documents. I note that the number of on-site surface parking spaces has been reduced on this Site Plan as well as significant re-configuration of the east side of the building. I understand that this updated Site Plan has not yet been reviewed by City staff.

Given that there is now an updated Site Plan, when will updated floor plans for the building be available – that will reflect the shifting of floor space from the northern section of the building to the southern section that was highlighted in the February NIM?

What is the collective impact of the updated Site Plan, the floor space shifts, and any other floor space changes that have not been announced, on the total floor space in the building?

Regarding the Geotechnical Engineering Report..... Will that report, along with City staff analysis of same, form part of the package that will be presented to the Planning and Strategic Initiatives Committee of Council? In other words, will councillors be fully aware of the report contents before they make a decision on the applications?

Please also advise whether updated OPA &/or ZBA applications have been, or are in the process of being, submitted by the developer's consultant. If there are new documents in this regard (in hand or anticipated), please advise when you expect to post them on the ShareFile site.

In addition to this email, I will be sending you two additional emails this afternoon to identify questions submitted in late December or early January that have not yet been fully answered.

Thanks for your assistance on these questions.

Sincerely,

From: Garett Stevenson [mailto:Garett.Stevenson@kitchener.ca]

Subject: RE: RE: 660 Belmont - Parking Study and TDM Plan document

Hello,

Yes, I received the Record of Site Conditions for east and west properties, as well as correspondence from the Ministry. I have also received an updated Site Plan. All are uploaded to the City's Fileshare website which you can access by clicking here: **Fileshare - Additional Plans & Reports**

A Geotechnical Report was not required for a complete Official Plan Amendment or Zoning By-law Amendment application, but will be required a future site planning stage.

Thanks,

Garett

Subject: [EXTERNAL] RE: 660 Belmont - Parking Study and TDM Plan document

Thank you, Garett.

The document has been successfully printed. This will be helpful.

During Thursday night's meeting, I believe that I heard that amendments have been filed to the OPA and/or ZBA applications, since these documents were first filed with the City last July. Can you please clarify what has happened on these documents? If they have been amended, please arrange to have the new versions posted to the ShareFile site.

Are there any other documents that have been updated since they were loaded to the ShareFile site early in September 2020? Please identify these revised documents and also arrange to have them posted to the ShareFile site.

In earlier correspondence with Juliane, I had asked for the Phase II ESA and RSC documents for the Western parcel of land at 660 Belmont. Could you please have those documents, and any related correspondence to/from MECP, added to the ShareFile sight?

Please also advise whether a geotechnical engineering report has been written for this site. Given the ground water history of surrounding properties, I would not be surprised if, in excavating for the underground parking, the developer encountered significant volumes of water. Depending on the volume encountered, the ongoing removal and disposal of that water could add significantly to the demand placed upon adjacent storm sewers, for decades to come.

I have several other questions that I directed to Juliane over the last few months, that were either unanswered, or not satisfactorily resolved. Should I gather these and forward them to you for resolution?

Your help is much appreciated.

Sincerely,

Good Afternoon,

Thank you for bringing this to my attention. The author "locked" their report because it included their Licensed Professional Engineer seal (page 2). I have uploaded an unlocked (and unsealed) version of the report to the Sharefile.

I have tested, and I am now able to print that report when accessed through Sharefile. Please let me know if you are not able to do the same.

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont - Parking Study and TDM Plan document

Good morning, Juliane.

I am writing to, again, refresh my January 4, 2021 request that the Parking Study and TDM Plan document be re-posted on the ShareFile site with no restrictions on our ability to print it.

For your ease of reference, I have provided excerpts from our previous correspondence on this matter:

> From my January 4th email: The Parking Study and TDM Plan document was posted to the Share File site as a "SECURED" document, which prevents readers from printing it. While I would prefer to receive information on-line, trying to review a 53 page document that contains specialized terminology, is, at best difficult.
> Please advise how I can print this document or arrange to have the secured feature disabled and the document then re-posted to the Share File site.

From my January 9th email: Regarding the Parking Study and TDM (Transportation Demand Management) Plan document, the version on the Share File is still the same (i.e. "Secured" and not printable) that was originally loaded to Share File on Sept 4, 2020. Please revisit this issue and advise when we can retrieve the fully functional document that I requested (i.e. point number 1 in my January 4th email below).

From your January 9th email: Thank you for letting me know about the traffic study . I tried opening and was able to so. Something else is blocking it. I will look into it further.

From my January 11th email: The difficulty with the Parking Study document is not that it won't open, but that when it does open, it is a "Secured" document - which means that it cannot be printed.
The file that is on the Share File site is the same file that was loaded there last September (i.e. it has not been replaced since it was originally loaded).

In the spirit of AODA compliance, I ask that this accessibility issue be resolved so that readers can print the document to support a proper review of same.

Thank you.

Garett Stevenson

Subject: [EXTERNAL] RE: RE: 660 Belmont - Parking Study and TDM Plan document

Hello, Garett.

I have included details on two outstanding matters raised with Juliane in late December or early January.

From Juliane's January 8th response email, Juliane's responses in red and responses from the applicant are in blue.

1. In reviewing this document (Tree Management Plan), prepared by the applicant's consultants, I noticed that there are five "Monitoring Wells" located on the site.
   The existence of these wells is not mentioned in either of the two "Phase One Environmental Site Assessment" reports. The applicants consultant has provided the following response in blue: The monitoring wells were installed as part of the Phase Two Environmental Site Assessment (ESA) and did not exist on-Site at the time of the Phase One ESA.
   a. When were these wells placed on the site? The monitoring wells were installed on June 28, 2019, July 4, 2019 , September 12, 2019 and August 11, 2020.
   b. Why were the wells installed? The monitoring wells were installed to investigate groundwater quality associated with areas of potential environmental concern (APEC) identified by the Phase One ESA.
   c. Who installed the wells? The wells were installed by a Ministry of the Environment, Conservation and Parks (MECP) licensed drilling contractor (Direct Environmental Drilling) on behalf of 660 Belmont GP Inc.
   d. Who is monitoring the wells? The wells are not currently being monitored. Groundwater samples were collected from the wells in July and September 2019, and August 2020 to facilitate the filing of the RSC for that property.
   e. What reports have been provided regarding the results of this monitoring effort? The groundwater analytical data associated with the monitoring wells are summarized in the Phase Two ESA report. No groundwater impact was identified.

   The "applicant response" with respect to well install dates, does not seem to make sense to me. Although the site visit for the Phase I ESA took place on May 29, 2019, the report was not issued until April 15, 2020 – many months after all but two of the monitoring wells were installed. Perhaps the Phase II ESA report, which has not yet been posted to the ShareFile site, will clear up the confusion.

2. With respect to the questions not yet answered from my December 18th email:
   Please reply to the question that I raised regarding the 3-D model of the proposed building and neighbouring properties. I would like to see views of this model before January 11th. I have attached the SketchUp model provided by the consultant it notes the proposed building massing but not the surrounding context I have contacted the architect and once I receive the context model it will be provided as well.

To my knowledge, a 3-D model of the proposed building and neighbouring properties has not been shared with the public. Also, I did not find an attachment in the January 8th email (for the SketchUp model).

I will also forward to you the email that my wife, Deb, and I sent to Juliane on January 15th. This was to serve as a response to the invitation to offer additional comments and questions after the December 17th NIM. I have had no response to that correspondence and many of our concerns were not mentioned in the What We Heard document.

Thanks for your assistance.

Sincerely,

Hello,

I would very much appreciate a consolidated email with your outstanding questions. As we have received a high volume of enquiries and questions regarding these applications, I am aiming to answer all emails this coming week.

I will follow up on the reports and materials you note below as well. I will update the City's website with the presentation by this Wednesday and work on updating the Sharefile site as new information is received.

Finally, you will see an invite from me this week regarding the upcoming small group discussions that I will be hosting. I do hope you will consider attending a session.

Thanks,

Garett

Subject: [EXTERNAL] RE: FW: Belmont Village Laneway

Thanks, Garett.

I appreciate your efforts in gathering responses to these questions.

Just to clarify, I do not believe that the last sentence in your second paragraph (highlighted in yellow below) is applicable to the proposed development at 660 Belmont. Please confirm or correct my understanding.

Thanks, again.

Subject: RE: FW: Belmont Village Laneway

Hello,

The Zoning By-law regulates the total building floor area based on lot size. In this case, the maximum Floor Space Ratio is 4 (the maximum above ground floor area is four times the lot area).

Floor Space Ratio – means the figure obtained when the building floor area on a lot is divided by the lot area. In the case of a building or part thereof located above a street or lane, the calculation of the floor space ratio

shall include that portion of the building floor area and that portion of the area of the street or lane between the lot line and the centre line of the street or lane.

If the lane is sold to the Developer, the lane lands and the property to the east of lane are consolidated, that increases the overall lot area, which would increase the total building area (it would be four times the consolidated lot area). The development concept includes all lands (including the lane) in the FSR calculation.

Thanks,

Garett

Subject: Re: [EXTERNAL] FW: Belmont Village Laneway

Hello .

I am forwarding your question to Garett for follow up.

Garett, I raised this question a while ago for the Bennett's. Can you please reply to them?

Below is their question:

One question they had that I did not know the answer to was regarding the size of the development, and how the size would be affected if the laneway was not included in the parcel of land. Would the development have to be smaller if it did not include the laneway property. As well, what will this mean to the adjacent buildings who currently front on that laneway in terms of their laneway use?

Thanks!

Margaret

Good morning, Margaret.

Could you please forward the response that you received from Juliane to the question you raised to her, on our behalf, in your email of December 21, 2020 (below)?

I could not find any evidence of this response when I searched through my emails this week.

Thank you.

Hello Juliane,

I had a very nice call on Friday night with Deb and Jeff Bennett. We had a good talk about their concerns for the 660 Belmont Ave proposal.

One question they had that I did not know the answer to was regarding the size of the development, and how the size would be affected if the laneway was not included in the parcel of land. Would the development have to be smaller if it did not include the laneway property. As well, what will this mean to the adjacent buildings who currently front on that laneway in terms of their laneway use?

Deb and Jeff, I hope I am repeating your question correctly, please comment and/or correct me if I did not.

Thanks all!

Kind Regards,

Margaret

Subject: RE: [EXTERNAL] RE: RE: 660 Belmont - Parking Study and TDM Plan document

Hello,

I have updated Sharefile with the Phase 2 ESA just now. The website will also be updated with this link shortly. Updated link below:
ShareFile - 660 Belmont Ave W

We do not have updated floor plans at this time and will be not requesting any additional drawings until after the public consultations meetings planned for next week and the consultation document is completed. It is likely upcoming conversations will result in additional ideas/considerations for the building design.

The Geotechnical Report will be a requirement of the future site planning process which will occur after Council's consideration of the Official Plan Amendment and Zoning By-law Amendment applications.

We do not have a revised Official Plan Amendment or Zoning By-law Amendment application at this time.

Thanks,

Garett

Subject: [EXTERNAL] RE: RE: 660 Belmont - Parking Study and TDM Plan document

Thanks, Garett.

When do you expect to secure, and post to the ShareFile site, the Phase II ESA for the western parcel at 660 Belmont?

Thank you for posting the updated Site Plan. It shows a very different picture of the site, compared to what was included in the Planning Justification Report submitted in July 2020 with the OPA and ZBA applications and supporting documents. I note that the number of on-site surface parking spaces has been reduced on this Site Plan as well as significant re-configuration of the east side of the building. I understand that this updated Site Plan has not yet been reviewed by City staff.

Given that there is now an updated Site Plan, when will updated floor plans for the building be available – that will reflect the shifting of floor space from the northern section of the building to the southern section that was highlighted in the February NIM?

What is the collective impact of the updated Site Plan, the floor space shifts, and any other floor space changes that have not been announced, on the total floor space in the building?

Regarding the Geotechnical Engineering Report….. Will that report, along with City staff analysis of same, form part of the package that will be presented to the Planning and Strategic Initiatives Committee of Council? In other words, will councillors be fully aware of the report contents before they make a decision on the applications?

Please also advise whether updated OPA &/or ZBA applications have been, or are in the process of being, submitted by the developer's consultant. If there are new documents in this regard (in hand or anticipated), please advise when you expect to post them on the ShareFile site.

In addition to this email, I will be sending you two additional emails this afternoon to identify questions submitted in late December or early January that have not yet been fully answered.

Thanks for your assistance on these questions.

Sincerely,

Hello,

Yes, I received the Record of Site Conditions for east and west properties, as well as correspondence from the Ministry. I have also received an updated Site Plan. All are uploaded to the City's Fileshare website which you can access by clicking here: **Fileshare - Additional Plans & Reports**

A Geotechnical Report was not required for a complete Official Plan Amendment or Zoning By-law Amendment application, but will be required a future site planning stage.

Thanks,

Garett

Subject: [EXTERNAL] RE: 660 Belmont - Parking Study and TDM Plan document

Thank you, Garett.

The document has been successfully printed. This will be helpful.

During Thursday night's meeting, I believe that I heard that amendments have been filed to the OPA and/or ZBA applications, since these documents were first filed with the City last July. Can you please clarify what has happened on these documents? If they have been amended, please arrange to have the new versions posted to the ShareFile site.

Are there any other documents that have been updated since they were loaded to the ShareFile site early in September 2020? Please identify these revised documents and also arrange to have them posted to the ShareFile site.

In earlier correspondence with Juliane, I had asked for the Phase II ESA and RSC documents for the Western parcel of land at 660 Belmont. Could you please have those documents, and any related correspondence to/from MECP, added to the ShareFile sight?

Please also advise whether a geotechnical engineering report has been written for this site. Given the ground water history of surrounding properties, I would not be surprised if, in excavating for the underground parking, the developer encountered significant volumes of water. Depending on the volume encountered, the ongoing removal and disposal of that water could add significantly to the demand placed upon adjacent storm sewers, for decades to come.

I have several other questions that I directed to Juliane over the last few months, that were either unanswered, or not satisfactorily resolved. Should I gather these and forward them to you for resolution?

Your help is much appreciated.

Sincerely,

Good Afternoon,

Thank you for bringing this to my attention. The author "locked" their report because it included their Licensed Professional Engineer seal (page 2). I have uploaded an unlocked (and unsealed) version of the report to the Sharefile.

I have tested, and I am now able to print that report when accessed through Sharefile. Please let me know if you are not able to do the same.

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont - Parking Study and TDM Plan document

Good morning, Juliane.

I am writing to, again, refresh my January 4, 2021 request that the Parking Study and TDM Plan document be re-posted on the ShareFile site with no restrictions on our ability to print it.

For your ease of reference, I have provided excerpts from our previous correspondence on this matter:

> From my January 4th email: The Parking Study and TDM Plan document was posted to the Share File site as a "SECURED" document, which prevents readers from printing it. While I would prefer to receive information on-line, trying to review a 53 page document that contains specialized terminology, is, at best difficult.
> Please advise how I can print this document or arrange to have the secured feature disabled and the document then re-posted to the Share File site.
>
> From my January 9th email: Regarding the Parking Study and TDM (Transportation Demand Management) Plan document, the version on the Share File is still the same (i.e. "Secured" and not printable) that was originally loaded to Share File on Sept 4, 2020. Please revisit this issue and advise when we can retrieve the fully functional document that I requested (i.e. point number 1 in my January 4th email below).
>
> From your January 9th email: Thank you for letting me know about the traffic study . I tried opening and was able to so. Something else is blocking it. I will look into it further.
>
> From my January 11th email: The difficulty with the Parking Study document is not that it won't open, but that when it does open, it is a "Secured" document - which means that it cannot be printed.
> The file that is on the Share File site is the same file that was loaded there last September (i.e. it has not been replaced since it was originally loaded).

In the spirit of AODA compliance, I ask that this accessibility issue be resolved so that readers can print the document to support a proper review of same.

Thank you.

Subject: [EXTERNAL] RE: RE: 660 Belmont - Parking Study and TDM Plan document

Hello, Garett.

I have included details on two outstanding matters raised with Juliane in late December or early January.

From Juliane's January 8th response email, Juliane's responses in red and responses from the applicant are in blue.

1. In reviewing this document (Tree Management Plan), prepared by the applicant's consultants, I noticed that there are five "Monitoring Wells" located on the site.
   The existence of these wells is not mentioned in either of the two "Phase One Environmental Site Assessment" reports. The applicants consultant has provided the following response in blue: The monitoring wells were installed as part of the Phase Two Environmental Site Assessment (ESA) and did not exist on-Site at the time of the Phase One ESA.
   a. When were these wells placed on the site? The monitoring wells were installed on June 28, 2019, July 4, 2019 , September 12, 2019 and August 11, 2020.
   b. Why were the wells installed? The monitoring wells were installed to investigate groundwater quality associated with areas of potential environmental concern (APEC) identified by the Phase One ESA.
   c. Who installed the wells? The wells were installed by a Ministry of the Environment, Conservation and Parks (MECP) licensed drilling contractor (Direct Environmental Drilling) on behalf of 660 Belmont GP Inc.

d. Who is monitoring the wells? The wells are not currently being monitored. Groundwater samples were collected from the wells in July and September 2019, and August 2020 to facilitate the filing of the RSC for that property.

e. What reports have been provided regarding the results of this monitoring effort? The groundwater analytical data associated with the monitoring wells are summarized in the Phase Two ESA report. No groundwater impact was identified.

The "applicant response" with respect to well install dates, does not seem to make sense to me. Although the site visit for the Phase I ESA took place on May 29, 2019, the report was not issued until April 15, 2020 – many months after all but two of the monitoring wells were installed. Perhaps the Phase II ESA report, which has not yet been posted to the ShareFile site, will clear up the confusion.

2. With respect to the questions not yet answered from my December 18th email:
Please reply to the question that I raised regarding the 3-D model of the proposed building and neighbouring properties. I would like to see views of this model before January 11th. I have attached the SketchUp model provided by the consultant it notes the proposed building massing but not the surrounding context I have contacted the architect and once I receive the context model it will be provided as well.

To my knowledge, a 3-D model of the proposed building and neighbouring properties has not been shared with the public. Also, I did not find an attachment in the January 8th email (for the SketchUp model).

I will also forward to you the email that my wife, Deb, and I sent to Juliane on January 15th. This was to serve as a response to the invitation to offer additional comments and questions after the December 17th NIM. I have had no response to that correspondence and many of our concerns were not mentioned in the What We Heard document.

Thanks for your assistance.

Sincerely,

Hello,

I would very much appreciate a consolidated email with your outstanding questions. As we have received a high volume of enquiries and questions regarding these applications, I am aiming to answer all emails this coming week.

I will follow up on the reports and materials you note below as well. I will update the City's website with the presentation by this Wednesday and work on updating the Sharefile site as new information is received.

Finally, you will see an invite from me this week regarding the upcoming small group discussions that I will be hosting. I do hope you will consider attending a session.

Subject: 660 Belmont - Bennett Family Concerns

660 Belmont – Bennett Family concerns

We are writing to express concerns with the proposed development at 660 Belmont Avenue West.

We have lived in our home on Belmont Avenue West, between Union and John, for over 36 years. Like many of our neighbours, who have also lived on our block for several decades, we appreciate the green spaces, mature trees, and services provided within walking distance. Belmont Village has a streetscape that other communities seek to emulate. It is a treasure of quaint shops, restaurants, and services that are appreciated by the locals and those living beyond our neighbourhood.

Sale of Belmont Lane East to developer

We strongly object to the sale of the Belmont Lane East lands to the developer.

This sale doesn't achieve any positives for the neighbourhood. The purchase of these lands is not being proposed in order to allow the developer to repurpose the lands (e.g. to allow the creation of more surface parking, to create green space or to improve the roadway).

Selling the lane property to the developer will facilitate the building of two floors of underground parking - a significant portion of which is proposed to be located under the Lane.

But more importantly, this sale will allow the building size to be increased significantly beyond what is otherwise allowable on the land on which the building will be situated.

Based on two recent statements regarding the lane, it is unclear whether the sale of this portion of the Lane will limit or deny the public from using the privately-owned portion of the lane, including accessing Belmont Ave W (between 660 Belmont and the Tim Horton's property).

"The Lane would remain as a **travelled roadway** in its current general alignment as part of the proposed development plan." (from the cover letter signed by Kevin Muir, Senior Planner with GSP Group Inc. that accompanied the package of OPA and ZBA applications and related documents).

In recent email correspondence, Juliane vonWesterholt was asked "...will that section of Belmont Lane East become, in effect, a private roadway?" Her response was "Yes, it would become a private roadway and not intended for public access."

As we heard during the two meetings, the developer has proposed a "mews" connection from Belmont to the Iron Horse Trail, and public access at the rear of the site. Should that be the case, the City will secure an easement for public access. We have done this for other developments (Sims Estate – Walter Bean Trail, Breithaupt Block privately owned parkette). The "mews" and amenity space can be privately owned, but if they are intended as public spaces, easements will be required.

The building is too tall

We are objecting to this development because we see it as the first step in the destruction of the appeal of Belmont Village. In our opinion, the scale of the building at 49 metres high is overly aggressive and it would set a very dangerous precedent for other developments that are bound to follow on Belmont between Glasgow and Union. One only has to refer to the City of Kitchener documentation on Tall Buildings and Developments to note that this proposed development does not reflect careful consideration for the neighbourhood.

We understand that more intensive use of land within the city is essential, if only to reduce the pressure to turn our precious farmland into a sea of winding streets populated with over-sized single-family residential properties on wide and deep lots.

We also understand the need to intensify the city's residential housing supply and we support the city's objective of doing so, primarily along the LRT and other major transit routes. However, there are ways to achieve those objectives without creating problems in nearby, long-established neighbourhoods.

We welcome change that improves quality of life for all income levels and supports accessibility for all. We appreciate the need to intensify the city's residential housing supply. These objectives can be achieved with an 8 storey building.

We urge the City to not exercise the option provided in the Official Plan (Section 15.D.4.23) whereby limitations in building height can be extended by up to 50%. It appears that the developer, in proposing the building design that has been published, is expecting council to exercise that option. In our opinion, we do not believe that the necessary criteria will be met and exercising the option will impose negative impacts on surrounding properties.

If the building were limited to 25 metres in height (seven or eight stories, depending on the ceiling heights for the various floors), the number of residential units on the site would increase from zero to 105 (seven residential floors with 15 units on each) thus clearly satisfying the need to increase the housing density.

No transitioning of height restrictions along Belmont Avenue West

Even if council were to limit the new building at 660 Belmont to a height of eight stories (25 metres or less in height), which we believe is the direction that council should take, we are concerned that the current Official Plan and Zoning By-law would permit buildings of this height on all of the properties along the northeast side of Belmont between Glasgow and Union.

For example, the former Esso service station property (Union at Belmont) could see a very tall building (up to 25 metres) – directly across the road from a residential neighbourhood populated primarily with single family homes no more than two stories high.
This would not be a good strategy.

Urgent Need for a Planning Study of Belmont Village and an Interim Development Freeze, pending completion of the study and implementation of appropriate zoning

We have been advised that at least one other development company has been actively purchasing several properties on both sides of Belmont Avenue West.

In order to prevent the creation of a streetscape of tall buildings and a concrete canyon, and the destruction of Belmont Village, we urge the City to initiate a planning study for the entire Belmont Village area and to impose an interim control bylaw, halting developments until the recommendations from such a study are implemented.

Without a vision for future development of Belmont Village as a whole, and consultation with the neighbourhood residents and businesses, one-off development proposals for specific sites will lead to a patchwork of buildings that will destroy that which draws people to the village. A rush to push through Official Plan and Zoning By-law changes only benefits the developer.

Insufficient Parking Supply on Site

1. Underground Parking for Residents

The Planning Justification Report says that there will be a total of 131 spaces in the underground parking. This includes fourteen private garages (with space for two cars plus significant additional storage or activity space). This configuration effectively leaves only **103** (=131 less (14x2)) remaining underground spaces to serve 149 (163 less 14) residential units. This seems to be a **significant under-supply** of parking for residents living in the 149 units.

Given the nature of the building suites (higher ceilings, generous floor space, many private terraces & fourteen private two-car garages in the underground parking), we expect that the overall demand for parking in this building (compared to less expensive condos or rental apartments) will be higher. These owners will have more cars to park, even if they choose to walk, cycle or take transit for most of their local trips.

By building private two-car garages with storage space, the space otherwise available for underground parking spaces is reduced.

The underground parking floorplan currently shows only **one barrier free parking space**, which seems to be a very low supply for a building with this many residential units, especially given the weather that we experience in Canada. Is there an expectation that some of the five barrier-free surface parking spaces will be dedicated to residents of the building?

Barrier-free parking is a requirement based on the required parking in accordance with the following:

6.7 **BARRIER-FREE ACCESSIBLE PARKING**

.1 Barrier-free accessible parking spaces must be provided in accordance with the following schedule, rounding up to the nearest whole number:

Off-Street Parking Spaces Required	Barrier-free Accessible Parking Required
1-12	1
13-100	4% of total required parking
101-200	1 + 3% of total required parking
201-1000	2 + 2% of total required parking
1000+	11 + 1% total required parking

For mixed use buildings, we want to see the barrier-free parking provided for residential visitors and commercial users, as well as building occupants. Our practice is to include these parking spaces within the common element of the condominium so they can be assigned to a building occupant as required. The barrier-free parking should be provided both underground for residential building occupants and some should be provided at the rear so they are accessible to commercial customers.

Surface Parking for First Floor Commercial Properties

The site plan currently shows 30 spaces of surface parking, including five barrier-free spaces (closest to the back door to the building).

It is unclear whether any of these spaces are intended to serve residents of the building or whether they are all intended to serve only customers and staff of the commercial properties.

We do not know the nature of the business that will occupy the commercial properties, so, at best, it is difficult to assess the demand for parking needed by their customers. However, if we assume that the businesses will have significant business volumes, we do not think that it is unreasonable for all 30 of the surface spaces (including the barrier free ones) to be occupied most of the time in business hours by business staff and customers. This would leave few, if any, parking spaces on the property to serve the needs of visitors to the residential units.

The parking required for the commercial uses must be publicly accessible – that means they should be located to the rear of the building, or within an ungated section of the garage. The commercial parking spaces also function as the residential visitor parking.

2. Parking Study and Transportation Demand Management Plan

Our read of this document raised the following concerns:

a. **Heavy reliance is placed on on-street parking, much of it in neighbouring residential areas** (both across the street from 660 Belmont and on the other side of the Iron Horse Trail), **to meet the new demand for visitor parking and/or customer parking for the commercial units.** The street parking in Westmount residential areas is already under pressure from customers/clients attending existing businesses and services in the Belmont Village. And if the patio feature that was implemented on Belmont between Claremont and Argyle this past summer is repeated in future summer periods, there will be even more pressure on on-street parking in residential areas.

   We feel that relying on these on-street parking spaces to meet the new parking demand created by a development is an inappropriate strategy. Other municipalities require customer parking and visitor parking to be accommodated either on a development site or on immediately adjacent on-street parking. We urge the City to adopt such a policy for all developments.

b. **The "Parking Study and Transportation Demand Management Plan" also does not address the impact of new traffic flows to and from this site on the Belmont Lane East entrances to Belmont Avenue West.** Getting onto Belmont Avenue West from Belmont Lane East (at any of the three intersections available) is already difficult at the best of times, especially if you are trying to turn left onto Belmont Avenue. Doing so at the intersection between Tim Hortons and 660 Belmont is even more difficult – to the point of being dangerous. This intersection is simply too close to the major intersection of Belmont and Glasgow to allow safe and efficient entry onto Belmont Avenue West.

   During the NIM, a statement was made that the traffic coming and going from the new development will actually be lower than what is currently generated by the customers of Dettmer Tirecraft. This expectation is simply ludicrous.

   We urge the city to revisit the question of expected traffic flow impacts created by this new development, including resident trips and the traffic generated by staff, customers and suppliers of the commercial properties.

Please note that the City of Kitchener has yet to address ongoing traffic and parking concerns that have plagued Belmont Avenue between Union and John Streets. For many years, residents on our block of Belmont Ave have repeatedly requested traffic calming measures. We are concerned that traffic concerns on Belmont Avenue, north of Union, will only be heightened with this proposed development and others that will no doubt follow suit.

Nature of the Residential Units

Will the residential units be sold as condominiums or will they be apartments for rent?

The cover letter for the OPA and ZBA applications package refers to them as *"163 residential units (condominiums)".*
However, on page 28 of the Planning Justification Report, in the section that analyses how the development will meet Housing issues (as defined in the 2020 Provincial Policy Statement, the 2019 Growth Plan for Greater Golden Horseshoe, Region of Waterloo Official Plan and City of Kitchener Official Plan) we note the following *"Concerning affordable housing, the proposed building does not include affordable housing that meets the City's defined housing benchmark. The proposed development, however, does assist with other housing objectives, including contributing to the rental housing stock and providing compact unit forms that cater to smaller households.*

I believe their intention is for this project to be market condominiums. We do not regulate ownership in the Zoning By-law.

Observations regarding Shadow Analysis

If you look carefully at the Shadow Analysis Graphics (Appendix A to the Urban Design Report), you will see that the building will cast new shadows far beyond 120 metres, impacting residences that did not receive the formal notice of the development (mailings made in August and early December).

For September 21, a graphic is presented to illustrate the shadow positions at 7:00 a.m. How are such shadows even possible when sunrise is at 7:09 a.m.?

For December 21st, a graphic is presented to illustrate the shadow positions at 8:30 a.m. However, the shadow extends beyond the border of the illustration, making it impossible to see how far the shadow extends.

We also note that graphics were not shown for significant periods when people are likely to be outdoors. For example, the last three hours (6 to 9 p.m.) before sunset on June 21st, the last two hours before sunset on September 21st and almost a full hour before sunset on December 21st.
We ask that these issues be addressed by publishing an amended Shadow Analysis.

Here are some additional observations drawn from the Shadow Analysis Graphics for two dates:

On June 21st, the longest day of the year, with sunrise at 5:41a.m. & sunset at 9:06 p.m.:

- At 6:00 a.m. the back yards of four homes on Avondale Ave will be in shade, as will be the front entrances of five homes on Earl Street
- Until 9:00 a.m. the building shadow will still cast all the way across Belmont Ave W

- By 3:00 p.m. (over six hours before sunset) the shadow will cover all of the site's surface parking and the portion of Belmont Lane East behind the building, and will start to cover the Iron Horse Trail
- By 5:00 p.m. (over four hours before sunset) the shadow will extend beyond the Iron Horse Trail and will cover a significant portion of the Gildner Green Park
- By 6:00 p.m. (over three hours before sunset) the shadow will extend beyond the Iron Horse Trail and will cover a significant portion of the Gildner Green Park
- We cannot confidently speak to the effects at 7:00 and 8:00 p.m. as no graphics for those hours were provided in the report; however, it is safe to say that the shadow will reach across the Iron Horse Trail (both above and below Glasgow Street), will continue to shade most of the lower portion of Gildner Green Park, as well as a significant area of the parking lot and entrances to the Catalyst building at 137 Glasgow Street

On December 21st, the shortest day of the year, with sunrise at 7:52a.m. & sunset at 4:49p.m.:

- At 8:30 a.m. the shadow reaches well above Union Blvd; perhaps it even reaches John St in Waterloo (the graphic for this hour shows that the shadow extends beyond the border of the illustration, making it impossible to see where the shadow ends); the shadow also fully covers Argyle Park and most of the adjacent parking lot.
- Until 9:00 a.m. the building shadow will still shade the back yards of three homes that face onto Union Blvd and cast all the way across Belmont Avenue West
- At 12:00 Noon (almost five hours before sunset) the shadow will cover all of the portion of Belmont Lane East behind the building to the north of 660 Belmont and will start to cover the Iron Horse Trail
- By 1:00 p.m. (almost four hours before sunset) the shadow will extend beyond the Iron Horse Trail and will cover the northern portion of the Gildner Green Park
- By 2:00 p.m. (almost three hours before sunset) the shadow extends across the Iron Horse Trail, the northern section of Gildner Green, a section of Eden Avenue and has started to impact residential properties along Wood Street.
- By 4:00 p.m. (almost one hour before sunset) the shadow has further extended impacting many residential properties on Wood Street as far as Park Street

Finally,
Public Notices regarding the development property

1. Formal notice of this proposed development was mailed only to addresses within 120 metres of the site, but many properties well beyond the 120 metre radius will be negatively impacted by this development proposal (e.g. increased traffic flow in residential neighbourhoods where the streets are not sized to take higher volumes, increased on-street parking demand in residential areas up to 200 meters or more from the development, reduced visibility to open sky and sunlight for many residential properties, the public parks, and the Iron Horse Trail).

   For all future communications, we encourage the City to expand the notification radius dramatically (to **at least** 200 metres) and to use the email mailing lists of the Cherry Park Neighbourhood Association and the Westmount Neighbourhood Association – both of which are recognized entities by the City of Kitchener. Our understanding is that neither of these organizations received formal notice of the development proposal.

2. We encourage the City to dispatch all future meeting notices well ahead of the statutory requirements. In these days of the pandemic, people are not likely to see notices posted on the sign on the 660 Belmont property, especially if they are posted late.

3. Notices mailed by Canada Post cannot be expected to be delivered in just a few days. (The Dec 4th letters were not delivered by Canada Post until 11 days after they were post-marked, which was just two days before the NIM.)

4. Given the significant level of participation at the first Neighbourhood Information Meeting, and the limited time available to answer the numerous questions submitted by participants, we strongly encourage the City to stage a follow-up NIM after the "What We Heard" document from the first NIM is circulated. We also encourage the City to post that document, and all other supporting documents, on the City's website so they are available for all to see.

The Planning Act requires that notice be provided to properties located within 120 metres of a development application and the City has followed this practice for this application. As part of the City's recent Development Services Review which included a review of opportunities to improve our public engagement practices, the City is exploring opportunities to expand the circulation radius for notice of development applications in order to provide more broad notice of future development proposals.

Thank you for your attention to these concerns.

I have responded to specific questions above and want to confirm that we will give serious consideration to all the comments as well. Public engagement is a fundamental part of the Planning process and almost every development application in Kitchener has been influenced by comments received through the process. Planning staff endeavor to find a balance of interests when making their recommendations to Council. Planning staff work to understand how a development application may change a community, and work with residents to manage change and to implement solutions to their concerns in the most appropriate way.

Subject: RE: [EXTERNAL] FW: 660 Belmont - confirmation of access to documents

Hello,

This is to confirm that I have posted the materials received to Sharefile. Please be sure to use the link on the website (www.kitchener.ca/planningapplications) as each time I add files to Sharefile a new link is created. Older links will open older versions of the Sharefile folder. *An updated link will be posted tomorrow.*

When new information is received, it will be uploaded to the City's website (Sharefile, etc). When there are substantial updates, I will send an email to the distribution list.

I have received a copy of the Geotechnical Investigation Report which is now posted on Sharefile (updated link).

I anticipate that the next Sharefile update will be the consultation summary from our upcoming meetings next week (and from Zoom Q&A) – I have committed to completing that works within 3 weeks of the final small group meeting.

Thanks,

Garett

Subject: 660 Belmont - confirmation of access to documents

Good morning, Garett.

Thank you for making the Phase Two Environmental Site Assessment Report (dated April 21, 2020) available on the ShareFile site earlier this week.

For over six months, since we first learned about the proposed development at 660 Belmont, the process of obtaining documentation about the development has been very piecemeal and has required considerable effort on my part.

It has therefore occurred to me to ask you to confirm, by the end of this week, that true and complete copies of the entire applications package and all relevant documents, both original and amended, are now available on the City's ShareFile site.

I would also like assurance from you that if any new documents or amended copies of previous documents become available to the Planning Department, they will be immediately uploaded to the ShareFile site and that you will notify me what new information is now available.

Thank you for your assistance.

Sincerely,

Garett Stevenson

Subject: [EXTERNAL] RE: FW: 660 Belmont - Map No. 1 in August 7, 2020 package mailed to neighbours

Thanks, Garett.

Is it fair to say that, at the moment, the lands in question are, "mis-zoned" IN By-law 85-1?

How could that have happened?

Until such time as Gildner Green is rezoned OSR-2 AND all of properties in the Gildner, Wood St area are re-zoned as RES-3, as part of the upcoming Neighbourhood Planning Reviews, what protection exists to prevent those lands being "re-purposed" for developments that would not be appropriate.

Councillors Johnston & Chapman, please comment on this issue and moved towards protection for these properties, with haste.

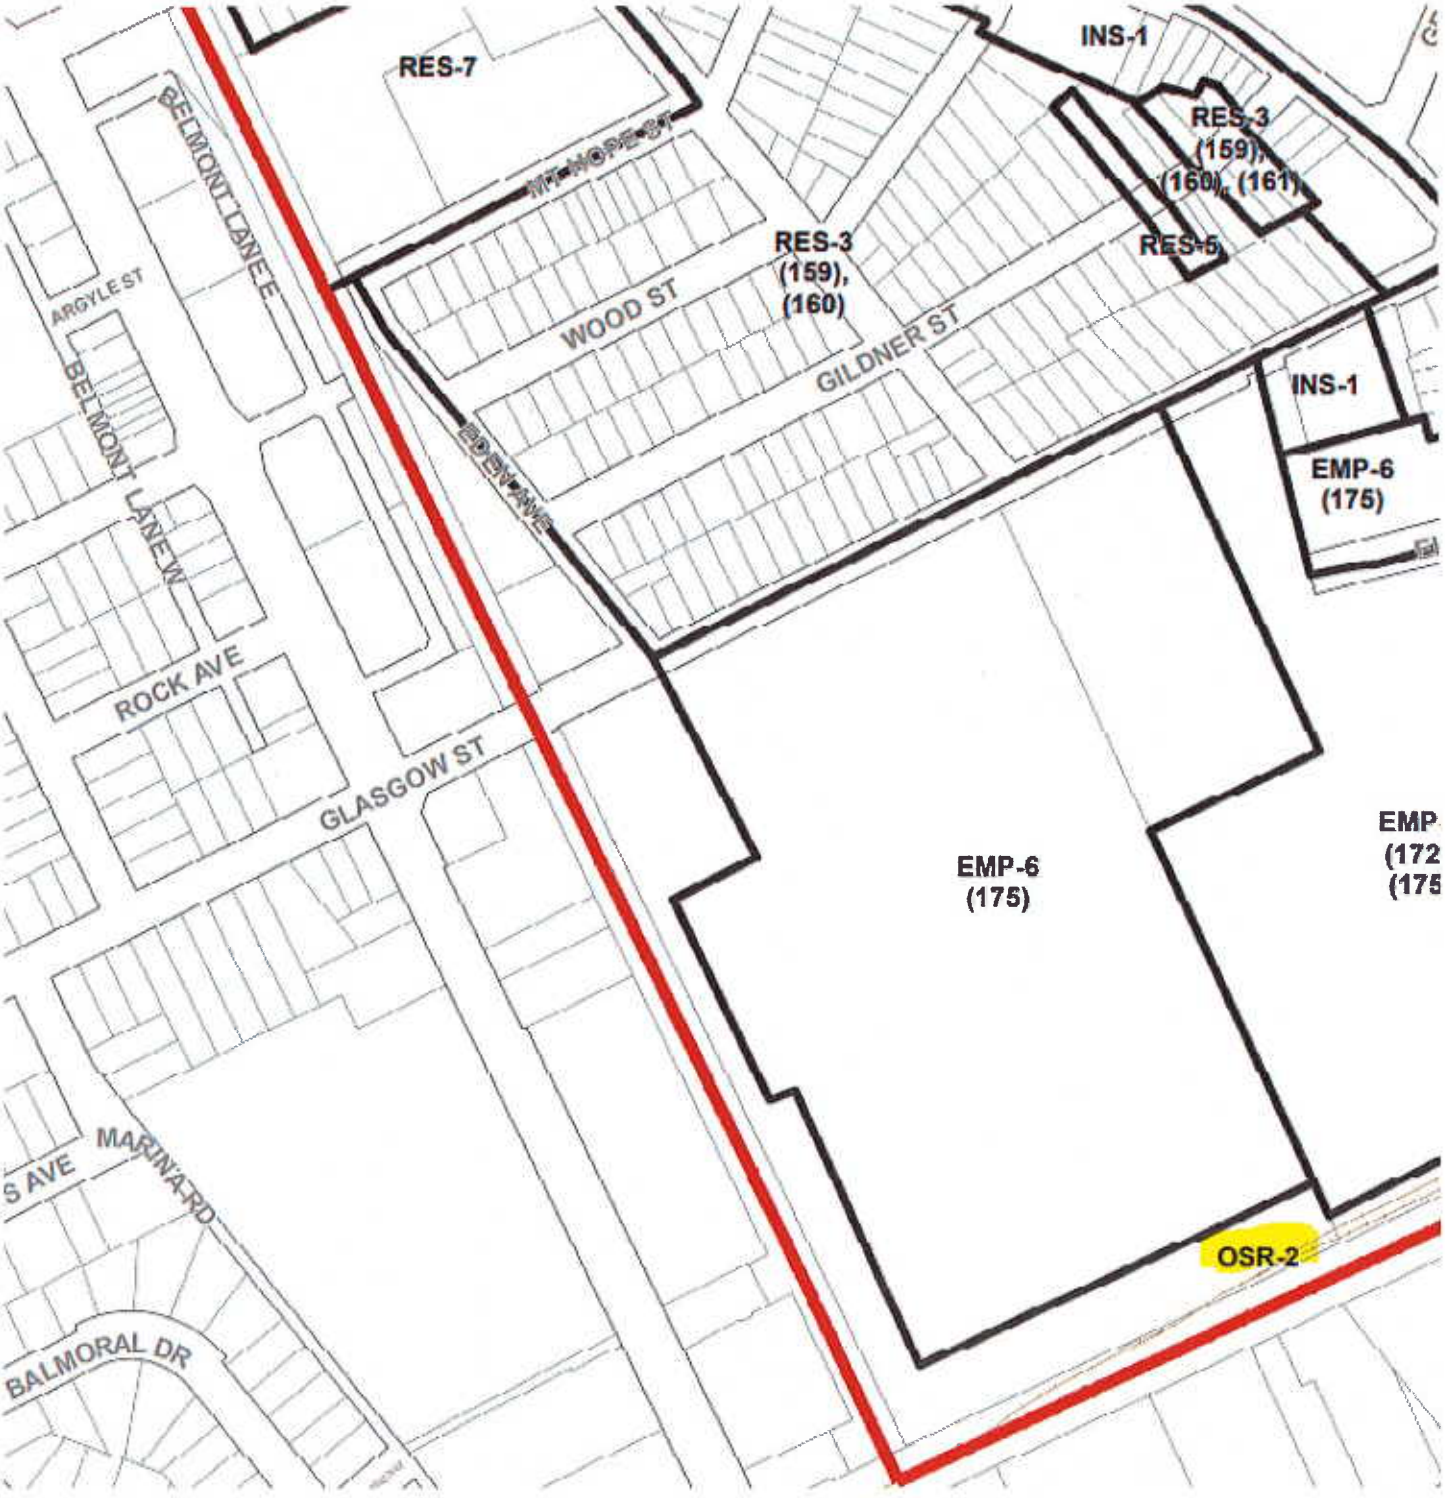
Subject: RE: FW: 660 Belmont - Map No. 1 in August 7, 2020 package mailed to neighbours

Hello,

Those lands are currently zoned as Residential Five (R-5) in Zoning By-law 85-1. It appears that zoning was applied to the lands when Zoning By-law 85-1 was applied across the City.

The zoning will be changing as part of the upcoming Neighbourhood Planning Reviews. The future zoning will be OSR-2: Open Space: Greenways (see below):



Thanks,

Garett

Good afternoon, Juliane.

Can you please explain why the Gildner Green park area, and three nearby lots (two on Wood St and one on Gildner St.) are labelled as "R-5" on Map No. 1 that formed part of the August 7, 2020 package that was mailed to neighbouring properties? I was expecting the part to be labelled "P-1" for Public Park Zone.

I have attached a scanned copy of the four page package for your ease of reference.

Thank you.

Subject: [EXTERNAL] 660 Belmont

Good afternoon, Garett. Thank you for your March 11th email (below).

I know that you have a heavy load ahead of you for the next week or more, but I am writing to ask for clarity on several matters, outlined below.

1. **Completeness of availability on ShareFile of all documentation related to the July 2020 OPA and ZBA applications.**

   In my March 11th email to you, I asked that "you to confirm, by the end of this week, that true and complete copies of the entire applications package and all relevant documents, both original and amended, are now available on the City's ShareFile site."

   Your March 11th email response was "This is to confirm that I have posted the materials received to Sharefile."

   Please confirm that true and complete copies of the entire applications package and all relevant documents, both original and amended, are now available on the City's ShareFile site."

- **I have uploaded copies of reports that have been received that were required as part of the complete Official Plan Amendment and Zoning By-Law Amendment Applications.**

2. **Letter to applicant confirming completeness of their applications package**

   Related to Item #1 above, please arrange to post to the ShareFile site, the letter that was issued by the City to the applicant, confirming that their applications package was deemed complete.

- **We do not typically post all correspondence on Fileshare – our practise is to provide information on the application and reports that were submitted. I can confirm the application was deemed complete on August 7, 2020.**

3. **Regarding Geotechnical Report(s)**

In your March 11th email to me you wrote "I have received a copy of the Geotechnical Investigation Report which is now posted on Sharefile (updated link)."

Given the email exchanges that we have had over the last two weeks (detailed below), I was surprised to see this report being made available. It was issued to the Zehr Group over a year ago - on February 20, 2020. It was clearly not loaded to the ShareFile site on September 4, 2020, when the GSP Group first loaded many of the documents related to the 660 Belmont development proposal.

Please confirm when and how this report was provided to City of Kitchener Planning Division staff.

- **The Geotechnical Investigation was not a requirement for a complete Official Plan Amendment or Zoning By-Law Amendment application. However, the City did receive the report with the application. The report was filed in a separate folder. After we exchanged emails, I did find the report which I posted on Fileshare as per your request.**

From Jeff's email to Garett on Feb 28th:
Please also advise whether a geotechnical engineering report has been written for this site.

Garett's email response to Jeff on March 4th:
A Geotechnical Report was not required for a complete Official Plan Amendment or Zoning By-law Amendment application, but will be required a future site planning stage.

Jeff's email response to Garett in March 5th:
Regarding the Geotechnical Engineering Report.....
Will that report, along with City staff analysis of same, form part of the package that will be presented to the Planning and Strategic Initiatives Committee of Council? In other words, will councillors be fully aware of the report contents before they make a decision on the applications?

Garett's email response to Jeff on March 9th:
The Geotechnical Report will be a requirement of the future site planning process which will occur after Council's consideration of the Official Plan Amendment and Zoning By-law Amendment applications.

4. **Additional Geotechnical Reports**

After reviewing documents previously posted to the ShareFile site, I am surprised by your March 4th and 11th responses (above).

In the Functional Servicing Report, issued to the Zehr Group on June 30, 2020 by Walter Fedy, I see the following: "a geotechnical report for the site will be completed by Chung and Vander Doelen Engineering and is to be submitted under separate cover."

This statement leads me to believe that a geotechnical report was not yet completed at June 30, 2020. The report issued on February 20, 2020 must not be this report.

Please advise when and how the report referred to by Walter Fedy was delivered to City of Kitchener Planning Division staff and when it will be available on the ShareFile site.

- **The Geotechnical Investigation was not a requirement for a complete Official Plan Amendment or Zoning By-Law Amendment application. However, the City did receive the report with the application. The report was filed in a separate folder. After we exchanged emails, I did find the report which I posted on Fileshare as per your request.**

In the Engineering Comments section of the "Record of Pre-Submission Consultation" (meeting held Sept 24, 2019), under the Stormwater Management heading, I see the following statement, presented in bold text: "As part of a complete application, a functional SWM Brief and a Geotechnical Report are required to illustrate how retention will be accomplished within the site."

Please advise when and how the report referred to in the Engineering Comments section was delivered to City of Kitchener Planning Division staff and when it will be available on the ShareFile site.

- **The only Geotechnical Investigation received by the City is the report dated February 20, 2020 prepared by Chung & Vander Doelen.**

Thank you for your assistance.

Subject: RE: [EXTERNAL] RE: City Policies and Procedures regarding the closure of a laneway and sale of it to abutting property holders
Attachments: ADM-COM-287 - Public Notice - Municipal Act 2001, As Amended.pdf

Hello

I wanted to follow up with you on your email below as well as our discussion at the Friends of Belmont meeting earlier this week.

I have ordered two new development application billboard signs and will install them in the next two weeks. One sign will update the existing sign facing Belmont Avenue West, and the second sign will be installed adjacent to the trail as requested.

The City does not have a formal policy for lane sales, but we do have a public notification policy (attached) that follows the Municipal Act when passing a by-law (which is needed for lane and street sales to close "public highways") – the formal public notice occurs once it is known when Council will consider the matter. However, I am going to write the owner of the Tim Horton's property directly next week to make sure they are aware of the potential consideration of the lane disposition as only the agency circulation letter included the lane purchase request language.

When the Planning and Strategic Initiatives meeting is scheduled, I will ensure that written (mail and email) notice and the newspaper notice (advertisement of the statutory public meeting) clearly outlines the applications and the lane purchase request.

Does Monday after 2pm or Friday before 3pm work for a StoryMap tutorial?

Thanks,

Garett

Subject: [EXTERNAL] RE: City Policies and Procedures regarding the closure of a laneway and sale of it to abutting property holders

Thank you for your email of April 26th, which appears below. I have questions, requests, and comments about a number of areas, as indicated in the next sections:

City Policy and Procedure Documents

On April 22, 2020, I wrote to the City Clerk (Christine Tarling) seeking clarification with respect to the process for closing a roadway and selling it. I asked for City policy and procedure documents related to the determination that a roadway has become surplus to the City's needs.

Ms. Tarling suggested that my request *"would best be handled by our Director of Planning and our City Solicitor."* With my agreement, Ms. Tarling forwarded my email to both to you as Director of Planning and to the City Solicitor. After waiting several days for the response from the City Solicitor, I asked when I might receive the response from her. You then advised *"My response to you regarding this matter was reviewed by Ms. MacDonald and she confirmed that my response contained all relevant information and she had nothing further to add to the response beyond the information I provided to you."*

Your response reiterated what I will call the "process narrative" that has also been shared in a number of pieces of correspondence with residents who are concerned about the development proposed for 660 Belmont.

I'm wondering whether I was not explicit enough about what I'd like to receive from you. To clarify, I would appreciate viewing the actual specific policy and procedure documents rather than summaries and interpretations provided by individual City staff.

Alternatively, perhaps I am to understand from your response that the City does not have actual policy and procedure documents regarding matters such as the possible closure and sale of public roadways? If so, I'd appreciate your confirmation that this is the case, along with the rationale for considering documented policies and procedures unnecessary.

Chronology of the Process Narrative

I find a number of elements in the chronology of the "process narrative" somewhat confusing.

For example, I'm not sure why staff would *"be directed to negotiate the sale of the land to the applicant"* before the Planning and Strategic Initiatives Committee is asked to consider selling the land, has had an opportunity to hear presentations from the public, and actually makes a recommendation (to Council) to sell the land?

It is also my understanding that a by-law would be passed to declare the land surplus. At what point in the process does that vote occur?

Last paragraph of your April 26th email

I also have serious concerns about the statements provided in the last paragraph of your email, where you quote a sentence identified as part of the "*initial circulation letter.*" I'm assuming that you are referring to the letter dated August 7, 2020, which was mailed to property owners. For ease of reference, I have attached a copy of this letter, which was supplied by Councillor Johnston on August 18, 2020, and which is listed as the Initial Circulation Letter under Supporting Documents for the 660 Belmont Ave project under Current Planning Applications posted on the City's website.

I'm having trouble finding the sentence you quoted in your email: *"The owner is pursuing the acquisition of the subject portion of the Lane through the proposed application process."* It does not seem to appear in

the August 7th letter. Nor does that letter "*identify the lane purchase request*" or, indeed, even mention the laneway at all.

Two subsequent letters (dated December 4/20 and February 4/21) mailed to property owners, and distributed by email to many neighbouring residents, are also completely silent with respect to the possibility of selling Belmont Lane East. To my knowledge, there have been no other letters to neighbouring property owners.

I am wondering where you might have found the sentence you quoted and why you presented it as having been part of the initial circulation letter.

I find it certainly perplexing and more than a little misleading that any formal disclosure of the developer's intent to incorporate the laneway property into the development is absent from the letters issued by the City of Kitchener.

My understanding is that the owners of properties abutting a roadway under consideration for closure have the first right of refusal with respect to purchasing their share of that roadway. This principle would seem to me to imply that the City would be obligated to approach those owners rather than passively waiting for a request from them. In fact, if no letter has been sent to The TDL Group by the City even mentioning the possible closure and sale of the laneway, it should come as no surprise that, as a number of staff have mentioned, the City has "*not received any interest from Tim Hortons to buy the lane.*"

Could you please tell me whether there have been any communications with The TDL Group regarding the opportunity for them to exercise their right of refusal so that they could add 15 feet to the northern boundary of their 638 Belmont property? If any such communication has occurred, I would appreciate the opportunity to see a copy. If no such communication has yet been sent, at what stage in the process might we expect that it will happen? And again, if it does occur, I would like to see a copy.

Representation of "Subject Area" on Circulation Letter Map

I also wish to point out that the "Subject Area" indicated by the map on the first page of the August 7th letter is not accurately identified. It delineates only the Western Parcel of the 660 Belmont property (i.e., where the Dettmer Tire building is situated).

The Eastern Parcel, between the laneway right-of-way and the Iron Horse Trail property, is excluded from the area enclosed in the rectangle, as are the laneway lands, in spite of the fact that the developer presented architectural drawings to the City last July that show that two levels of underground parking for the 660 Belmont development proposal is planned beneath the lane lands.

This same map was also included both in the subsequent two letters to property owners and on the City's announcement sign posted on the 660 Belmont site.

I find what could be considered misrepresentation of the property proposed for development on this map to be misleading and feel that it undermines the efficacy and transparency of the process. Small wonder that neighbours are confused when I explain that the developer has plans to build two levels of parking under the laneway.

I look forward to hearing back from you, and I thank you in advance for responding to all of my questions, requests, and comments above and for providing clarity about this process.

Sincerely,

797 Belmont Ave W

Subject: RE: City Policies and Procedures regarding the closure of a laneway and sale of it to abutting property holders

Good evening Mr. Bennett,

Thank you for your inquiry. The City follows the Municipal Class EA process regarding lane closures here: APPENDIX 1 A) MUNICIPAL ROAD PROJECTS (municipalclassea.ca).

The decision of whether or not to sell Belmont Lane will be determined by Kitchener City Council. Generally, the process for selling City-owned land is as follows:

- A potential purchaser contacts the City of Kitchener with a request to the purchase land
- City internally circulates the request to City Departments to determine if the land is to be retained or if it could be sold
- If the lands are required to be retained (e.g. current/future City use, infrastructure) the applicant is advised that the request cannot proceed
- If the City deems that the land is surplus and can be sold to the applicant subject to Council approval then the following takes place:
    - The City engages an AACI Appraiser to value the land
    - A Staff report is prepared recommending the land be declared surplus, notice be given to close the road and staff be directed to negotiate the sale of the land to the applicant at a price which shall be the Fair Market Value including any conditions
    - The Staff Report is tabled at a public meeting of Council where the public can provide their input regarding the sale – in this case the development applications and lane sale would be the same staff report so no timing is known at this time
    - Public notification is typically through the Staff Report and the agenda and meeting date are posted on the City's website – in this case everyone who participated in the process will be made aware of any public meetings on these applications
    - Council will vote on the request and if they agree to sell the land, will enter into an Agreement of Purchase with the applicant
    - On the closing date the applicant will provide the City with the sale proceeds and title will be transferred to the applicant

The initial circulation letter did identify the lane purchase request and noted "The owner is pursuing the acquisition of the subject portion of the Lane through the proposed application process". That letter was mailed to all property owners within 120 metres, including the owner of Tim Horton's. We have not received any interest from Tim Horton's to buy the lane.

I hope this information is helpful.

Kind regards,

Rosa Bustamante

To: Christine Tarling <Christine.Tarling@kitchener.ca>
Subject: [EXTERNAL] City Policies and Procedures regarding the closure of a laneway and sale of it to abutting property holders

Hello, Christine.

I understand that the Zehr Group (or one of their companies) has expressed an interest in purchasing the portion of Belmont Lane East from Claremont Avenue through to where the lane turns west and connects to Belmont Avenue West.

This expression of interest is driven by their OPA and ZBA applications related to 660 Belmont Avenue West, that were delivered to the Planning Division early in July 2020.

In discussions with various Councillors, and in a presentation to a Neighbourhood Information Meeting, I have heard various viewpoints or understandings of how this process would be managed, when it would be discussed by Council (both in caucus and in a public session), how and when the land would be deemed surplus, how and when the public would be notified of the City's intent to sell the land, etc.

I have been left with conflicting viewpoints on this whole process.

Could you please provide documentation on the City's policies and procedures that would come into play in dealing with this request, as well as information about which City department would be managing this process?

Perhaps the policy and procedure documentation exists on the City's website, in which case you could provide links to those web pages?

If the City determines that the land can be sold, because the southern leg of this laneway abuts the developer's property at 660 Belmont and the Tim Hortons property immediately to the south (638 Belmont), I would expect that TDL Group (Tim Hortons parent company) which owns the 638 Belmont property, would be offered an opportunity to purchase the half-width of that portion of the laneway.

I have no idea whether the TDL Group is even aware that there is a development proposal for the neighbouring 660 Belmont property under consideration by the Planning Division, let alone whether they are aware that they might have an opportunity to purchase the half-width of the laneway.

Please give me a call if you have questions about my requests for this information.

Thank you for your assistance.

Sincerely, 797 Belmont Ave W

Garett Stevenson

Good morning, Garett.

Thank you for your reply email.

By the way, I did see your email last week, advising that you would need some time before you could reply to my request for the list of addresses. I appreciated your acknowledgement of my request but I was not at all expecting a prompter reply. Your email last night was much better turnaround than I could reasonably expect.

Thank you for your assistance.

Subject: RE: 660 Belmont - address list for mailed notifications

Hello Jeff,

Sorry for the delay in my response. I hope you saw my earlier email advising that I needed more time to respond.

I have provided the list of addresses (below) that were mailed within 120 metres of the subject site. We sent mail 3 times as you note below – initial circulation on August 7, 2020, notice of the first NIM on December 4, 2020 and notice of the second NIM on February 4, 2021.

The next mailout will be the notice of the Statutory Public meeting when it is scheduled (not scheduled yet).

As there will not be a mailout when the website is updated, I have committed to following up with the FOBV to make you aware when that happens.

The list below will be updated to include anyone who participated in the process that is outside of the 120 metres as well. And the same notice will be sent by email to everyone that participated as well.

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont - address list for mailed notifications

Happy Labour Day Weekend, Garett.

My understanding is that the addresses within 120 metres of the 660 Belmont site were mailed notices about the proposed development on at least three occasions (August 7, 2020; December 4, 2020 and February 4, 2021).

My further understanding is that this same mailing list is intended to be used again to notify the community of both

- the delivery of the new proposal (forthcoming) from the Zehr Group and
- the notice of the first statutory meeting (Planning and Strategic Initiatives Committee).

Please correct my understandings if they are not correct on these details.

Over the last year, there has been much discussion and conjecture in the community over how many actual letters were, and will be, mailed on these occasions.

In order to resolve that question, I am writing to ask for the list of addresses that have been, and will be, used for these mailings. I am not asking for the names of the people or organizations at these addresses, so there should be no concerns over privacy in releasing this list of addresses.

Given the overwhelming interest in the community regarding this development proposal, I also request that strong consideration be given to expanding the address list for the next mailings - to include all properties within at least a **240 metre radius** of the site. This larger radius would better reflect the main properties that will be impacted by this proposal.

In recent weeks we have continued to meet people living relatively close to 660 Belmont who have little or no knowledge of the development proposal and the impact that will have on our community. In light of the fact that Parking Study authors used a **200 metre radius** when they assessed the availability of on-street parking in the neighbouring residential neighbourhoods, I suggest that expanding the radius for future mailings regarding the 660 Belmont proposal would be totally justifiable.

Thanks for your assistance.

Good afternoon, Garett.

On the same day that you wrote to Maureen Ferraro (to alert FBV that information about the revised 660 Belmont proposal was available on the city's website), I received the email below from "660 Belmont".

I was surprised to see that you were copied on that email.

Please advise why the Zehr Group copied you on the invitation email directed to me.

Because I expected that the "Meet the Developer" events would be, in some fashion, a promotional effort, it did not make sense that you would be on copy.

Wishing you a good weekend.

Thanks.

Subject: Meet the Developer: Learn more about the redevelopment of 660 Belmont Ave. W.

Dear .

I hope you are doing well.

As one of the fastest growing regions in Canada, Kitchener must prepare to accommodate 950,000 people by 2051. The region understands the need to focus on collaborative and smart solutions that fit everyone's needs. With this in mind, strategic and sustainable home development is critical in supporting the influx of new residents, addressing low housing supply and meeting demand.

Zehr Group is proposing to redevelop 660 Belmont Ave, W. from a one-storey commercial building into an 11-storey mixed-use development with 132 residential units and ground-floor commercial space. This proposal is just one example of how the region can provide much-needed housing opportunities and ensure an adequate supply of housing for present and future generations.
Zehr Group appreciates and encourages community input to drive insightful development. To date, community input has been critical in the planning of 660 Belmont Ave, W. and has led to key changes in building height, total storeys and design.
Continuing to foster this strong relationship with our community, we would like to invite you to "Meet The Developer" — an event to explore the redevelopment plans and view the site for yourself. We encourage you to ask questions, share insights, and learn more about the proposed development of 660 Belmont Ave. W.
To ensure we can meet with as many members of our community as possible, please select the date that best suits your availability and we will be in touch with finalized event details.
Thank you for your time and we look forward to meeting you.

All the best,

Zehr Group

ZEHR

Subject: 660 Belmont Proposed Development
Importance: High

Dear Mayor Vrbanovic and Councillors,

It has been 6 months since we first met (in person or virtually), during your guided tours of Belmont Village. Back in the spring, your willingness to meet with representatives from the Friends of Belmont Village (FBV) was encouraging. We appreciated the opportunities to dialogue and to learn from each other.

After many months of waiting, the Zehr Group has delivered a revised proposal to our city planners. As a concerned citizen who, from the very beginning, has been closely following the proposed 660 development, it is more than disappointing that the Zehr Group has done little to address the major concerns raised by the citizens at the two NIMs and the small group meetings. The overriding concerns raised at the public meetings were:

1. the impacts of a building height almost double the by-law
2. sustainability
3. the sale of a portion of Belmont Lane East to the developer

A recent report in The Record (Saturday, November 6th, 2021) has compelled me to write to all of you to keep you apprised of ongoing concerns and to separate substance from spin.

It is implied in the newspaper report (and in the headline) that the revisions will significantly reduce the building height. **This is not true!** Based on the architectural drawings, the actual height of the structure is now 43.7 metres and the net reduction in height is 4.7 metres. These measures are available on the City of Kitchener's website. The newspaper report would have one believe that the building height is now 39.1

metres tall. **This is spin.** The slightly reduced height (at 43.7metres) is a far cry from the current by-law height of 25 metres.

The artist's rendering, published with the newspaper report, showing the scale and perspective of the building **is deceptive.** One would need to sit atop a 25 metre high perch to have the same vantage point! The building now appears much smaller than the renderings provided with the original development proposal, which showed the build from a perspective closer to street level. **This tactic is deliberate and misleading.**

In terms of sustainability, there are few real or firm commitments from the developer. The letter signed by the Zehr Group regarding Sustainable Development Initiatives is littered with phrases such as: "It is our intention…", "will contribute to promote sustainable development", "provisions may be provided", "may be designed", "will consider", "will assess feasibility", "we will strive to", "wherever possible". There are no assurances in such promises.

The newspaper report also fails to mention the Zehr Group's request to purchase City-owned Belmont Lane East from the south entrance off of Belmont Ave to Claremont Ave. This was discussed at the pre submission meeting but was not divulged to the public when letters were sent to the residents within 120 metres of the site. It came to light during the NIMs that the City signage was misleading and that the intent of the developer to purchase the laneway was not disclosed to the public. Even now, the developer's revisions are presented as if the purchase of Belmont Lane by the developer is a forgone conclusion. Sale of this laneway only benefits the developer while eliminating all future possibilities that could improve the community. The Urban Design Manual published by our City recommended that the Belmont Lanes (East and West) be maintained as public property! We have finite public spaces in our established neighbourhoods. I worry that developers initiating the purchase of publicly-owned laneways for their personal gain will become the norm. As one developer has told us, it is a novice move to sell a public laneway that is currently used by citizens. I urge you, as our elected officials, not to go down that rabbit hole!

Taxpayer money has been spent creating by-laws that are not being enforced and creating urban design manuals and guidelines that are being ignored. If we want to have the reputation of being a smart city, we need to make decisions that **raise the bar for innovative, visionary development**. When developers set the terms for developments and when only the minimum of building codes are met, the outcomes are not in the best interest of the public, the environment, or future generations.

Intensification has become "**THE**" justification for building higher. Developers are routinely seeking zoning by-law amendments to grossly increase building heights. In every ward, aggressive development is occurring because it is not being stopped. We know that the City of Kitchener and the Region have achieved intensification well above targets for several years. The intensification argument is not valid to support excessive height requests. Intensification targets can be met within the current zoning by-law height limitations. Building smarter and enhancing the liveability of our communities is long overdue. Inclusive, net zero, smart builds, designed to enhance established neighbourhoods are all possible within the current zoning by-law constraints. Please support smarter (not higher than by-law) builds, to improve the quality of life for all.

In the Belmont Village area, we are looking to the future with eyes wide open. We envision responsible development that protects the diverse businesses and shops that we frequent. We welcome, in fact we embrace, new development within The Village that protects what we value most. Stability, livability, and a sense of belonging are important to us. People who move here tend to stay for the long term. Invested citizens feel a sense of ownership. They help to create a safe community and they work to protect it.

In contrast, developers and their stakeholders swoop in for the short term. Their involvement in a community is profit motivated. We know that the higher the build, the greater the number of investors (both local and foreign) and the greater the transitory occupants and vacancy rates. Studies have demonstrated that residents feel increasingly isolated and less connected to their community the higher they live above street level. Developers have told us that investors don't care about parking, amenities, greenspace, or liveability. We know that the more exclusive the build, the less diverse and inclusive the shops. Smaller units and fewer options for growing families also result in a more transient population. I can't imagine that any of you, as our elected officials, would want the degradation of established communities to be your legacy!

I understand that the 660 Belmont revised proposal will be presented at PSIC in early 2022, and realize that there will continue to be "spin" created by the developer and its public relations team to promote this proposal in the heart of Belmont Village. I urge each of you, as our elected officials, to listen to your constituents and to question the ultimate intent of this developer. Who is truly benefiting from the sale of the City's Belmont Lane East and who is profiting from a build almost double the height of the current zoning by-law? It is certainly not the communities that surround this property.

I would be pleased to hear your thoughts about my concerns as outlined above.

Sincerely,

797 Belmont Ave W
Kitchener, ON
N2M 1P5

Hi Garett,

I haven't heard much about the Belmont project in recent weeks and I had meant to send this on to you sooner.

I'm really concerned about the attitude shown by Zehr Group that an 8 story project for this location isn't viable. So they haven't got drawings and have had zero intention of sticking with what is within the bylaws now.

How is this different than me buying a residential lot and expecting to put a 4 story house on it to get the square footage I need, regardless of what the rules are? No council would even consider entertaining this.

What is considered financially viable? Would they lose money or just not make enough money to satisfy their profit margin? There are so many questions that blanket statement generates that we haven't even heard any details to support this. It's just a short non descript answer.

Thanks

Hi ,

Thank you so much for your note. You have identified a lot of issues here that Garett Stevenson would be best to raise your questions with.

Garett's report was a report of when asked certain questions how the Developer answered them. He would be able to address your thoughts with regards to these answers from his professional perspective.

Garett's email is garett.stevenson@kitchener.ca.

I would be happy to forward your email to him and copy you in as well if you would like.

Thanks!

Kind Regards,

Margaret

Subject: [EXTERNAL] RE: Friends of Belmont Village Newsletter #2 - April 10, 2021

Hi .

I read the recent response put out on twitter from the City Planner, and one thing I was shocked by is the canned respond from Zehr Group that the building isn't feasible at 8 stories. HUH?

Is there some way for us to get further information on this? It's a bit surprising given how many successful 8 story complexes have gone up across KW. It's not feasibly because...I draw a blank here other than they won't make enough money. And that's not an acceptable reason to grant exceptions. Exceptions should be granted where the city benefits as a whole from the project. I do not see any considerations here that support that.

There are a number of possible reasons for this response, but its concerning that going into this the project wasn't viable at the current heigh restrictions. They've gone ahead with their drawings and planning as if they would be approved. Dettmer has moved across town.

I feel like I'm missing something here about this whole process – any thoughts on who I should address this to?

I've also worked with Zehr Group in the past. They were the defacto General Contractor in the Catalyst 137 building. I ended up terminating my agreement with them because they refused to work within my budget, and insisted the project couldn't be done. So I went to another contractor that I knew would work with me. In my budget. Zehr Group budgeted double what my project ended coming in at. This Belmont project smells similar...

Thanks
Lara

To: Juliane vonWesterholt
Subject: [EXTERNAL] 660 Belmont redevelopment Dettmer Tire location

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Juliane,

Thank you for the opportunity to write and offer my opinion on the proposed redevelopment.
I like the idea of the spot being used for housing but not 13 storeys high.
That is far too high for our neighbourhood. I think it should be limited to 8 as per the current bylaws.
13 will feel huge, towering and out of place, as well 163 individual units is a lot of people and a lot of extra cars in one spot.

Cars especially at an already very, very busy corner of Glasgow and Belmont. That much traffic will take away from the village feel in Belmont, where traffic is generally slowed.
We don't want a ton of cars going up and down the village all day and night. Will feel like a major route rather than the village.

I welcome new development and the influx of new housing, But not an explosion of people and cars at the end of the village. Feels too much. Let's keep them to 8 stories, that in itself will be well enough.

Respectfully,

104 Earl street,
Kitchener, Ontario.

Subject: RE: Information meeting regarding Belmont HIGHRISE

Hi

Thank you for your email. Please see my responses to your questions below:

1. The meeting tomorrow is a Neighbourhood Information Meeting organized by the City of Kitchener, supported by City staff from several departments and also attended by the applicant in the event that some questions can best be answered by the applicant. We can certainly appreciate that the irtual style of Neighbourhood Information Meeting used does not afford the residents the same ability to speak as the panelists. This model is temporary during the pandemic and used when there is a large number of residents attending to ensure we can try to address as many questions as possible during the meeting. We know that residents may want to hear answers to all questions, and we want to make sure that the answers are provided for everyone to hear, which is why the number of speakers is limited.

   We continue to improve on our digital engagement and reflect after every meeting on how to make it better. The large scaled digital meetings clearly have some unintended consciences that we will continue to work to address. While large scaled meetings like the one in December, and the one planned for Thursday, are efficient in sharing information, they need to be supplemented with some two way dialogue between City staff and the residents. We are planning a series of smaller scaled digital meeting with 10-15 people in attendance so that everyone will have an opportunity to speak and ask questions. We will be announcing the details of these meetings (planned for the week of March 16) on Thursday night.

2. The City has a planned Urban Structure – meaning that every property has policies and regulations that guide existing and future uses. For example, as you note, the City must intensify in key locations to accommodate growth to prevent urban sprawl. The City is planned with intensification areas including a series of nodes and corridors and Belmont Village is planned to accommodate additional growth as an Urban Corridor. The nodes and corridors are part of the City-wide approach to accommodating growth, and any changes would have to be considered comprehensively through future reviews of the Official Plan. The City's Official Plan includes policies that permit buildings designated as Mixed Use in Urban Corridors to be 8 – 12 storeys in height subject to the applicable policies.

3. The City has reviewed the Parking Study and Transportation Demand Management (TDM) Plan submitted with the application. The Developer is seeking a reduction from the required parking and the report notes some key TDM measures that could be integrated as part of the development to reduce parking demand - 10 accessible visitor and 82 secured bicycle storage spaces, selling/leasing a residential and parking units separately, as well as access to transit and pedestrian connections). As part of processing the application, our Transportation Department will review the Parking Study and TDM Plans.

4. The Planning Act requires that notice be provided to properties located within 120 m of a development application and the City has followed this practice for this application. As part of the City's recent Development Services Review which included a review of opportunities to improve our public engagement practices, the City is exploring opportunities to expand the circulation radius for notice of development applications in order to provide more broad notice of future development proposals.

5. Section 42 of the Planning Act gives the City the authority to require parkland dedication as a condition of certain types of development. Local approval authorities, like the City of Kitchener, are responsible for preparing a Parkland Dedication Policy which outlines the criteria for requiring parkland dedication (as land or a cash payment) and to plan future park needs. The current Parks Strategic Plan outlines where parkland is needed and provides strategies for acquiring the needed parks. Recent and future investments in the Iron Horse Trail are also intended to strengthen a key active transportation corridor to connect residents to trails and parks throughout the City.

If you have additional questions or comments, please let me know.

Kind regards,

Rosa Bustamante

Subject: [EXTERNAL] Information meeting regarding Belmont HIGHRISE

Dear Juliane, Joanne and Margaret,

Thank you to all of you for responding to my request for a zoom invite to tomorrow night's info meeting regarding the Belmont high-rise. And to Margaret for correcting the email address for me. I appreciate that.

I understand this is an info meeting from the city or the developer? And not a question session for those of us who live in this community. Can you please clarify for me?

And if so, when will the community members have an opportunity ?

I have a few other questions as well please.

1) What does the city see as the advantage to the 13-storey building in the village?

I understood it was to be 8-storeys, and why are we now considering 13?
It is extremely high for the area.

2) Will the developer be able to build what he/she wants or is there anything that requires the developer to adhere to a look that is fitting with Westmount/Cherry Hill and the Belmont village community?

3) I understand that there is **reduced parking available in this proposed highrise** and there will not be enough spots for all the residents or their guests? The solution is for many of the residents and guests to simply park on residential streets surrounding the building.

Is this a normal and viable solution from the city's point of view to allow "hunt and peck where you can" side street parking when considering a building of this size??

4) I live at 104 Earl street and I am wondering **why all my neighbours on the other side of my street were not in receipt of the formal notice from the city to inform them of this development?**
Why were they left out of the city's announcement?

5) Is there a **plan for increased green space** with the influx of this many people? Does the city consider these sorts of things when allowing a dense population building?

Thank you,

Best regards,

104 Earl Street,
Kitchener, Ontario.

Subject: HI Garett

Dear Garett

I know it is Friday afternoon and I am sure you are just pooped after doing these sessions all week. Thank you for extending this opportunity to all these session with our community members.

I think it would be prudent and most decisive in this situation for our city planners to agree on doing a study on the growth for the Belmont village area, encompassing the Westmount and Cherry Park areas.

There is just too much at stake here to allow BIG developers with lots of money and clout to simply come in and create their "self-serving vision" without input from the surrounding communities and the people who live here.

Why is it their vision? It's my community, my neighbourhood. Me and my neighbours support the businesses in the village daily. I've paid the taxes here for 22 + years not them!! .

Absolutely I understand the area is zoned for mix use, and absolutely we must allow for additional housing and absolutely it needs a sprucing up. And absolutely we must allow for and be open to growth. Yes, in complete agreement !

But not a decimation!

Because you and I know Garett this is where we are headed.

So before we let developers decide on the vision for Belmont village and for our community neighbourhood let's do an urban study or plan that would be considerate of ALL stakeholders, not just the guys with the money.

What do you think about that possibility?

Thanks, Garett,

I hope you can have a well-deserved restful weekend.
Get outside where there is fresh air for your head, I am sure you could use it.

Kindest regards,

Garett Stevenson

Subject: [EXTERNAL] 660 Belmont .

Dear Garett,

I hope this finds you doing well. I know that you must be tremendously busy. I appreciate you being open to continued input.
and I want to thank you for all your hard work on this. I hope you don't mind my "bold" font, that's my passion!

A couple of things that I want to re-iterate as I think they are extremely important and front and centre to the opposition to the Zehr developments condo proposal.

1) The proposal for 660 Belmont in its current form will set a **"dangerous precedent" for future proposed developments up and down both sides of Upper Belmont, in Belmont Village.** This will assuredly result in the *eventual decimation of the character and use of the village*. Developers are not interested in being landlords. They tear down and they rebuild to make money. I'm not opposed to developers making money. I just think we should be clear about everyone's intentions.

As you know and have stated, to accept this proposal and the imposing size of this build in this neighbourhood, will put extreme pressure on future city planners to accept proposals from "other" developers for the same size, height if not higher, with no regard for the existing use or character of the community.

- **660 Belmont is the gate keeper to the future survival of the "character" and use of Belmont Village**
- **The fact that some of the existing buildings are old and tired and need retrofitting is not remedied by a 49-metre condo building!!**

2) The mixed-use by-law for the **east side of Belmont is 25 metres**.
The amount the developer can legally ask to increase this by is 50%**, NOT 100%,**
So, can we please be sure that in our discussions **we are not considering the 100% or the 49 meters as a place to work or compromise from!**

In our opposition to this proposal, we have been reminded many times "that to request a build below the current by-law" is not allowed. (Even though the city's official plan
does indicate that 2 to 4 storeys in Belmont village would be ideal, before the by-law changed and made this official plan mute.)

So, it is fair to say , that both the developers and the community must stay within what the current by-law allows for point of discussion and compromise.

- **37.5 metres is the only allowable legal increase request!**
- **49 metres should not even be in the equation or up for discussion.**

3) Please refer to of 15.D.4.23 of the official plan.

The clause reads as follows -

"Notwithstanding Policy 15.D.4.2, the City **MAY CONSIDER** increases to the permitted building height of up to 50% of the permitted building height where a development or redevelopment provides a mixed-use building containing residential units. It **MUST BE** demonstrated that a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied".

What we have seen so far in the proposal is a "overbuild" monolithic design that does not suit the character of the village. There is no green space or amenities for the 163 units/tenants, small street side patio of 5 metres deep, increased traffic to the village and the neighbourhood, loss of sunlight all year round to many homes in both Cherry Park and Westmount neighbourhoods, and insufficient parking for the residents, their visitors, and patrons to the new building.

(The developer's proposal that the "community" can use the parking lot behind the building for events is inconsequential at best. (All Belmont neighbours' chip in to help with neighbourhood activities, lane or block parties etc. it's no biggie!!) I donate my backyard and electrical outlets to Bestival every year for 3 days. It's just what we do here to make things work for our community).

- **We have not yet seen the required compatibility criteria in this proposal to warrant going the extra 50%.** (Maybe you have a new proposal in hand.)
- **We know that the developers feel anything less than their proposal is not viable. T**

4) The laneway that runs between the Dettmer lot and Tim Hortons and behind is a city owned laneway.

As tax paying community members and I suppose you could say we are part owners of the land, we would ask the city to not to sell this piece of land.
This laneway serves a very important role in the practical day to day functioning of the current buildings and businesses and thus maintains the
relaxed and friendly feel of the village.

Large transport trucks use the laneway for the delivery and collection of many goods and services behind the buildings and not on the actual street.
Without the laneway to use, these large trucks and vehicles will be on the village street.

They are huge, disruptive, noisy, creating dust, blocking traffic, and hindering drivers, pedestrians, and outdoor diners during deliveries.

The fact that the garbage is currently picked up from behind also allows the wide city sidewalks of the village stay clean, friendly, and walkable all year round, every day of the week. It maintains a pedestrian friendly feeling and allows for open air dining/beer gardens on the boulevard.
If we lose the laneway this will all cease and the street in the village becomes very utilitarian, eliminating the people place "village feel".

- **Community members do not want the laneway sold.**
- **If sold "the loss of use" of the laneway will contribute to the decimation of the village and its ability to function as a part of a pedestrian friendly community.**

Thank you, Garett,

Again, just needed to get these few things off my chest and remind you of the impact.

The developers tell a good story about being tied to the community, but at the end of the day this development in its current form impacts the village and the community negatively for the future.

As a city, and as residents *and* developers we can all do so much better for this community and future residents of our city.

Sincerely,

104 Eart Street,
Kitchener, Ontario

Subject: [EXTERNAL] 660 Belmont proposed amendments

Dear Garrett,

I hope this finds you doing well and having a great start to your summer.

We wanted to follow up regarding our most recent meeting that we had with you and Margaret about the proposed amendments to the condo build at 660 Belmont.

We understood from that meeting that the Zehr group was working on some changes as suggested by you and the planning department, including input from the community. Mentioned during that meeting was height and setbacks?

We are wondering about the status of the amendments, and if you have received it back yet.

And if not what kind of timeline was suggested to the developer to complete same?

If you are in possession of the amended proposal, can you, please share with us what has been achieved so far?

Thank you, Garret. If it is easier for you to attend another "zoom" meeting with us to discuss, let's please do that.

Thanks again.

Subject: [EXTERNAL] Re: Friends of Belmont Village are wondering about an update on the 660 proposal

Thank you for the update Garett.

A couple of us attended a recent BIA meeting, and JD was present.
He indicated that they were working on something that they were "very excited about" and made the inference that we would be excited too. Not sure if that was postering for the BIA membership or if they are truly getting close with something acceptable.

As discussed previously with you , you had mentioned that you would be alerting us in advance to tell us the new proposal has been submitted and posted to the city site. (It's because of the way he talked during this meeting we thought that there may have been some action.) Just checking. Thank you.

Thanks Garett,
and Margaret

Kind regards,

Subject: [EXTERNAL] Hello Garett, from Maureen Ferraro

Dear Garett,

I know it is Friday afternoon of the long weekend, I certainly don't expect an immediate reply, but I do have some very important questions that
I know you could help me with.

1.
2. When do you anticipate hearing back from the Zehr group with their revisions? Have you had any indication at all that it is pending?

I think that they are gearing up to submit a revised proposal in the next couple weeks. I will post at www.kitchener.ca/planningapplications when we get something submitted.

3. We met with the BIA two months ago and JD Zehr in that meeting stated that there were some exciting "changes" coming.

I am waiting to see the revised proposal.

4. It's been months now since they last told you this and we are wondering if this is normal for it to take this long? what do you think?

It can take this long if they are redesigning the site and redoing their proforma (updating the financial assessment of the project).

2. I am also wondering what garbage/organic/recycling management systems/facilities must be installed in 660 Belmont and other "tall" buildings. My son lives in a tall one in Toronto and the efforts to recycle

are just abysmal. I am hoping we have by-laws for condos in this city for same. Well, by-laws with teeth that is.

I know that Charlie West has a three sorter chute system (recycling, organic, garbage) so I anticipate the same here.

3. Who are the owners of the 660 Belmont site? Is it solely the Zehr group or are there other partners?

I do not know the make up of the business arrangements of the ownership.

Many thanks Garett,
With kind regards as always and a Happy Thanksgiving.
Sincerely,

Garett Stevenson

Follow Up Flag: Follow up
Flag Status: Flagged

Hi Juliane:

I wanted to follow-up with you about the 660 Belmont Proposal.
(I apologize for the delay getting this to you - I would have preferred an extra week considering the time was over the extended Christmas break....)

We are not in favour of the proposed project as follows;

1 - Massing

At 13 stories the proposed building is too high compared to other neighbouring buildings in the Belmont Village block, which are ~ 2 stories high or less.

I have attached a few mock-up views showing the comparison.

Such a tall building would wreck the atmosphere of Belmont Village, especially once other similar tall buildings are added along the block.

I think 6 - 8 stories would be more suitable.

2 - Traffic

We are concerned that there will be increased traffic that uses the "cut through" down Earl Street and Rock Street, to avoid the lights at Belmont and Glasgow.

This was mentioned at the Zoom meeting - is there a proposed resolution to this?

3 - Location to Transit

The location of 660 Belmont is approximately 1000 m walking distance from the closest ION station.

This would seem to be too far for someone who regularly commutes, to walk to the Ion station.

Why not encourage higher density close to the Ion line, so that it can be conveniently used by commuters?

I suggest that a high density building at 660 Belmont, prevents one from being economically viable at another more suitable location near the Ion line.

4 - Parking

The proposal adds 163 residences to the area.

Currently I count 94 residences in the Glascow-Avondale-Union-Belmont block.

This will create more parking pressures in the area, and traffic in the area.

If 1 or 2 similar high rise units are added in the block to the north of 660 Belmont in the future, the effect will be multiplied.

5 - Green Spaces

There are limited green spaces in the area.

Adding many new residences in the area will increase the pressures on the small green spaces.

5 - Future Development - Overall Plan for Belmont Village

If the same pattern is used for the rest of Belmont village, it will not be a quant "village" anymore.

Has the City studied how Belmont Village should be best developed?

6 - Construction

Has there been any discussions on how the construction would proceed, and specifically whether the construction would require any closure of Belmont Street or the Iron Horse Trail?

I use the trail regularly and I am concerned it will be un-necessarily closed because of construction.

Please contact me if you have any questions.

Thank you

20 Earl Street

Subject: [EXTERNAL] 660 Belmont Avenue West Proposed Highrise Accesses

Dear Madam / sir;

I live close to the above proposed 13 story commercial / residential; high rise unit.

I wanted to inquire about the proposed accesses to the property, both to Belmont Avenue and to the Iron Horse Trail.

1 - Belmont Avenue West Access

I am concerned about the proposed use of the Belmont Lane south entrance, as an entryway into the currently-proposed development, consisting of 163 residential units and 5 commercial units.

My concern is that the south intersection of Belmont Lane with Belmont Avenue West, is too close to the intersection of Belmont Avenue West and Glasgow Street. I have attached a Google aerial view of the area. I believe currently that section of Belmont Lane does not have a high traffic volume, or truck volume, but that could change with the proposed development.

The City of Kitchener has designated Belmont Avenue West and Glasgow Street (north of Belmont) as arterial roads, so I believe their intersection would be considered as a major intersection.

The Transportation Association of Canada (TAC) 1999 Geometric Design Guidelines indicate that Arterials are roads where traffic movement is the primary consideration while land access is a secondary function. (See section 3.2.3.3)

TAC indicates a suggested minimum "arterial-road driveway / laneway access - nearest signalized intersection" spacing of 70 m. (See Figure 3.2.8.2).

However I believe that the south section of Belmont Lane is only located about 38 m from the intersection of Glasgow, almost 1/2 of the recommended distance. This could result in some of the inadequate corner clearance problems indicated in the attached TAC section 3.2.8.1.

Does the City know what the proposed highrise accesses are?
Yes. One access onto Belmont Lane East. This allows vehicles to access Belmont Avenue West via ether end of Belmont Lane East and at the mid-point at Claremont Avenue.

Has the City studied the use of Belmont Lane as an access to the proposed development?
There were no formal studies completed that focused on Belmont Lane East specifically. However an analysis was completed regarding the number of vehicle trips in/out of the site based on the proposed 163 units.

The Institute of Transportations Engineers manual, 10th edition was utilized to estimate the number of vehicle trips for the AM and PM peak hours. We looked at two options for multifamily housing, Dense Multiuse Urban and General Suburban. In this situation, we took the worst case scenario General Suburban. The data indicated that in the AM peak hour there were 50 vehicle trips generated (12 in/38 out) and in the PM peak hour, 59 vehicle trips generated (36 in/ 23 out). While the Dense Multiuse Urban generated a total of 34 AM and 31 PM peak hour vehicle trips. It should be noted that the threshold to seek a formal Transportation Impact Study is 100 vehicle trips, which is a standard adopted by the Region of Waterloo, the City of Kitchener and many other public entitieis, as anything less is seen as nominal traffic that should not have an impact on overall traffic patterns. This site did not meet that 100 vehicle trip threshold. However, there are two existing left turn lanes along Belmont Avenue West that permit access to this site at Belmont Lane East (near Union Boulevard) and Claremont Avenue. Left turns are also permitted onto Belmont Lane East (near Glasgow Street). Based on the low vehicle trips, existing left turn lanes and several access points to the site, the generated vehicle trips would be minor in nature to the surrounding road network.

Could you please provide the details of any investigations that have been done.
A parking study and transportation demand management plan was completed as part of the applicant's submission. Attached is a copy of that study.

Belmont Lane with Belmont Avenue West, is too close to the intersection of Belmont Avenue West and Glasgow Street.
You referenced TAC design guidelines for signalized intersection spacing and, on the surface, you're correct about the spacing as it relates to TAC and in today's environment. However, we need to look at what occurred in the past, in this area to fully understand when intersections where designed and road widths were allotted. This area of Belmont Avenue West (formerly Belmont Boulevard) had a road design, which included Belmont Lane East, in place in the 1930's. The location of roads are as we see them today. While the development itself is new, no new accesses are being proposed.

2 - Iron Horse Trail Access

The Iron Horse Trail is the main multi-use trail travelling north-south in central Kitchener, with users including higher speed bicycle commuters.

For fitness and commuter users, being able to maintain speed in a pleasant and safe environment are important. (I also like that it has a naturalized feel in many areas....)

Regarding the proposed highrise direct access to the Iron Horse Trail, while I recognize that convenient access is important for usage, I am concerned that there will be a high number of western accesses to the trail along the ~ 380 m section between Glasgow and Union. Currently relative to the 660 Belmont property, there are west side trail accesses located approximately;

- 35 m south at Glasgow
- 130 m north at the end of Mount Hope Street (ramp access)
- 241 m north at the north end of Belmont Lane
- 270 m north at Union

My concerns are:

- each access represents a potential conflict area for the trail users
- each access point requires sight line considerations along the trail, which would result in bushes and trees being cleared in the naturalized areas adjacent to the trail and the subsequent change of character / loss of urban wildlife habitat.
- each access must be maintained going forward - sightlines kept cleared
- will any future developments along Belmont Lane, also want their own accesses?

Does the City of Kitchener have any Policies regarding Iron Horse Trail accesses?

When the Iron Horse Trail strategy was written in 2015, one of the goals was to improve, or at least acknowledge private connections to the trail. We were trying to shift away from an exclusive corridor model at the time and encourage private access. People will get to the trail as directly as possible even if it was fenced, so it is the City's role to make the trail as safe and accessible as possible to do so. Plus we want people using the trail!

There are no direct policies that speak in great detail of accesses and crossings but the general support is in the IHT Strategy (full page snip below).

Your points on user conflict, tree clearing (though more for shade and function reasons, less habitat) and sightlines are all very valid – all of which can be controlled through design and signage.

5.4 NETWORK CONNECTIVITY

A well designed trail provides ample connections between existing transportation networks, and public and open spaces and effectively integrates into urban centres and planned future development. By providing strong network connections, trail users are able to connect with destinations not only within the urban core, but to longer distance travel linkages into surrounding neighbourhoods and communities. The Iron Horse Trail is a key component of the City of Kitchener's active transportation network serving numerous commuters, both pedestrians and cyclists, on a daily basis. Issues identified within this theme include trail connectivity, parks and public spaces, nature in the city enhancements and potential development connections.

5.4.1 Trail Connectivity

Connections to existing and planned trail networks greatly increase the recreational and utilitarian potential and value of a trail system by providing greater uninterrupted distance and safe, alternative transportation routes. The Iron Horse Trail is already an important transportation route within the Waterloo Region and is part of an integrated network that links together communities and numerous commercial and recreation opportunities. In addition to the formal linkages, there are also a number of informal worn paths that connect the Iron Horse Trail with adjacent commercial and residential areas. Through the public consultation process, trail connectivity and improved connections to surrounding areas and the broader transportation network was identified as a main concern. Comments and suggestions include:

- Improved connections from the Iron Horse Trail to Belmont Village. Improved landscaping and a partnership with Belmont Business Improvement Area could be explored.
- Improved connections from the Iron Horse Trail to on-road bicycle lanes and other cycling infrastructure.
- Extend the Iron Horse Trail further south beyond Ottawa Street and identify the potential to connect the trail to Rockway Gardens and the Trans Canada Trail.
- Explore trail connections on private property as a partnership with property owners.
- Partner with the City of Waterloo to coordinate trail improvements and enhancements and emphasize the connectivity that the trail provides between the two cities.

Recommendation:

5.4.1A. That Staff continue to improve network connectivity from the Iron Horse Trail to the larger city-wide multi-use pathways and trails network.

5.4.1B. That permanent counters be installed along the Iron Horse Trail to measure and monitor pedestrian and cyclist trail usage over time.

Thank you

Garett Stevenson

Subject: RE: [EXTERNAL] Re: 660 Belmont Avenue W - Small Group Discussion - Zoom Link - Session 8

Hello,

The City does not keep an active list of building heights – if there is a particular building you are interested in I can pull the file and check approved plans.

If you are trying to get a general sense for height, this might be a decent resource (although I cannot confirm the accuracy): https://en.wikipedia.org/wiki/List_of_tallest_buildings_in_the_Waterloo_Regional_Municipality#:~:text=The%20tallest%20building%20in%20the,164%20ft)%20Black%20Forest%20Condominium.

I think that the Belmont Trio buildings are the tallest now, at around 46 metres in height.

Take a look and let me know you think.

Thanks,

Garett

Subject: [EXTERNAL] Re: 660 Belmont Avenue W - Small Group Discussion - Zoom Link - Session 8

Hi Garett:

I apologize I forgot one question in my earlier email today.

I wanted to get a sense of what a 49 m tall building is.

Does the City of Kitchener have a list of highrise heights for existing buildings?

I wanted to know how the proposed 660 Belmont 49 m height compares to other highrises in the mixed use corridors.

How does the 49 m height compare to building heights in say the block of; Westmount / Victoria / Park Street / Kitchener northern boundary.

Could you provide me with a list of highrises (say over 6 stories) along Belmont and their heights?

Would 660 Belmont become the tallest building abuting Belmont Avenue?

Thanks

On Thu, Mar 18, 2021 at 10:33 AM Ed McCarron <edsmccarron@gmail.com> wrote:

Hi Garett:

I had a few questions about Belmont Village that I was hoping you could answer.

1 - Mixed Use

The City of Kitchener has designated Belmont as a Mixed Use corridor, is that correct?

How many mixed use corridors are there in Kitchener?

How big are they, both in terms of size, and expected residential capacity?

Is there a report that maybe summarized that, that you could point me to? (the details about each one...)

Could you provide me with a condensed summary chart of each corridor and the size data?

2 - Urban Village

The Kitchener Growth Management Plan (KGMP) Fall 2019 - Fall 2021 indicates:

- Five of the Mixed Use Corridors are major streets that lead into the Urban Growth Centre, with two being "urban villages".

What are the Urban Villages in Kitchener?

Is Belmont Village considered as an "Urban Village"?

Does the City have any planning documents relating to "Urban Villages"?

If so, could you point me to them.

If not, what does the city mean by "Urban Village"?

Does the City have any planning strategies relating to Urban Villages?

****

Thanks again for all of your help.

Subject: Re: [EXTERNAL] Re: City of Kitchener "Urban Design Manual" - Costs (660 Belmont)

Good Morning

Thanks for following up, below is the information that Garett Stevenson has put together to answer your question:

Part A – This section contains Urban Design Guidelines that were approved between 2017 and 2019. There are 13 sections that are applied based on the geography and planned function of a property (Downtown, Nodes and Corridors, etc) as well as based on the building typology (tall building, mid-rise building, etc). The City retained Bousfields to prepare the 'Design for Industrial Employment Areas' section in 2017 at a cost of approximately $30,000, however the balance of the document was prepared by City staff. The project lead was Dayna Edwards.

Part B – This section of the Urban Design Manual contains area specific guidelines are that are specific to drive through facilities, mix-use corridors and Queen Street Placemaking. The mixed-use corridors (now known as Urban Corridors) Area Specific Design Brief dates back to 2003. In 2003, Kitchener City Council supported the general principles outlined in the Mixed Use Corridor Urban Design Brief and directed staff to undertake a final public consultation process prior to their adoption and ultimate inclusion in the City's Urban Design Manual. In 2005, Council approved the Mixed Use Corridor Design Brief, largely as it exists today. The current Mixed Use Corridor Design Brief was brought into the current UDM format in Part B in 2010 (last updated 2012) which is why it says "2012" at the bottom.

Part C – This section contains specific design standards that are used to evaluate a specific proposal or plan (site plan, lighting plan, etc). This section was prepared by City staff and is updated as standards and regulations change, or when new requirements are established. This section is updated and reviewed by the City's Urban Designers.

Let me know if you have any questions.

Thanks,
Garett

Hi Margaret, I hope that things are well with you.

I was trying to get details about the above City of Kitchener report, dated 2012.

Would you be able to get that information, presumably by contacting the appropriate person in accounting etc., or directing me to the person I should contact directly?

I would like to know;
- the total cost to complete the report
- how much was paid to outside consultants, and a summary list of which outside consultants were used
- the time period to complete the report
- the City of Kitchener staff experts who authored the report

Thank you for your assistance.

Subject: RE: [EXTERNAL] Re: 660 Belmont - Is this in the City of Kitchener PARTS area?

Hello,

That TDM Checklist is used for properties within Major Transit Station Areas (MTSAs) in advance of new zoning being applied in the MTSAs (since the parking rates in By-law 85-1 are outdated). It is anticipated that there will be MTSA specific parking rates that are somewhere between the MIX rates and the UCG (downtown rates). We are in a time of transition because the Midtown Secondary Plan is not approved, so while 660 Belmont Avenue West is within the MTSA, we have to consider the direction in the Midtown Plan that this is an Urban Corridor (and the Official Plan directs us to look at station area planning for guidance). For properties like 660 Belmont Avenue West that are zoned in the new Zoning By-law, the TDM measures like bicycle parking and shared parking are built in to the rate (residential visitor and commercial can be shared).

So, in summary, it is not an error, but Transportation staff have to consider the proposed reduction from the MIX parking rates based on all the evidence in the Report, not just the TDM Checklist.

I hope that helps to explain this. Happy to chat any time.

Thanks,

Garett

> Thanks, that answers my question - I'll need to review some of your references to understand it more.

One related question I had, was that the July 2020 Paradign 660 Belmont Parking Study and TDM plan, talks about the 660 Belmont building being in the PARTS zone.

They also have incorrectly shown the location of 660 Belmont as being in Gildner Park (See map on Page 29 of 53).

Paradigm then assumed that 660 Belmont was within the PARTS boundary and they used the City of Kitchener "PART TDM" checklist to suggest a reduction in the required parking at 660 Belmont. (See Page 20-21 & 52-53 of 53)

Do they have that incorrect?

Thanks

On Mon, Apr 12, 2021 at 8:13 PM Garett Stevenson <Garett.Stevenson@kitchener.ca> wrote:

Hello,

660 Belmont is within the Grand River Hospital Major Transit Station Area on Map 2 in the Official Plan:

https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_OP_Map_2_Urban_Structure.pdf

Belmont Village was identified as a Draft Influence Area in PARTS:

https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_PARTS_Midtown_MIDTOWN_STATION_AREA.pdf

This direction was confirmed through the PARTS Midtown Plan and is not in the City's draft plans as part of the MTSA:

https://www.kitchener.ca/en/resourcesGeneral/Documents/DSD_PLAN_PARTS_Midtown_Plan.pdf#page67

The Region has now prepared draft proposed MTSA boundaries around ION Rapid Transit Station Areas as part of the ongoing Regional Official Plan review which align with the PARTS Midtown Boundary for Belmont Village:

https://www.engagewr.ca/regional-official-plan/maps/proposed-boundaries-around-ion-rapid-transit-station-areas#marker-33821

So, given all of that direction, this property will be outside of the PARTS areas.

I hope that explains it a bit better.

Thanks,

Garett

Juliane von Westerholt,
Planning Division,
Kitchener City Hall,
6th Floor, 200 King Street West,
Kitchener, ON N2G 4G7

Dear Ms Juliane von Westerholt,

I am very concerned about the zoning by-law amendment requested for 660 Belmont Avenue by 660 Belmont LP Inc. to allow a 13 storey (49 metres in height) building to be built at this site. I think the current zoning of Medium Intensity Mixed Use allowing an eight storey (25 metres in height) is perfect for that location and thus an amendment should not be granted to 660 Belmont LP Inc. This amendment request would **double** the allowed height of a building according to the current zoning.

Belmont Village is a unique area in our city with a collection of low to mid-rise buildings surrounded by single family homes. It is a popular destination for those using the very well loved and busy Iron Horse Trail running beside the Village. I've noticed with the outdoor patios installed due to the COVID-19 pandemic, it has become a popular destination to sit outside and socialize with friends. Changing the zoning for 660 Belmont Avenue to allow a 13 storey apartment building would change the character of the village. A mid-rise apartment building with retail-commercial uses on the ground floor fits in very nicely with the rest of the buildings in Belmont village. Mid-rise buildings have a good scale and relationship to the street. A mid-rise is low enough to let the sun in and open view of the sky from the street. A mid-rise building does not cast a long shadow during the cold, gray days of winter depriving surrounding areas of much needed sunlight. A mid-rise building provides a comfortable pedestrian environment, a person walking by does not feel dwarfed by a looming high-rise. A mid-rise building would lead nicely into the low-rise community surrounding it.

A 13 storey building does not belong in Belmont Village. It would be totally out of place. A high-rise at 660 Belmont Ave site would leave no room for a lawn, trees or gardens to soften the effect of a high-rise on the surrounding streetscape. If you walk towards Victoria street from Belmont Village, and look at the high-rise buildings closest to 660 Belmont Ave. we find high-rises surrounded by trees, lawns and gardens. At 545, 547, 565 Belmont Ave W, Northview Apartment & Townhouses, the maximum height of the high-rise buildings is 11 stories. Northview Apartments & Townhouses is surrounded by lawn and has over 35

mature trees. Next door there is Belmont Village Condominiums at 539 Belmont Ave W. again the building has less than 13 stories. In front of this building is a wide lawn and a flower garden. The complex of four high-rise buildings at 460 Belmont Ave W has two 13 story buildings but once again these buildings are surrounded by lawns, trees, flower gardens and a playground. If you walk the other direction on Belmont Ave. toward Union street there is another apartment complex called Park Place at 81 York street with three high-rise buildings. These high rise buildings almost take up a full city block of space. The buildings are surrounded by lawns, gardens and trees set back from the stree. This help the high-rises blend into the surrounding low-rise neighbourhood.

The planners got the zoning correct for 660 Belmont Ave. Please do not allow the requested amendment. A 13 storey high-rise apartment building does not belong in Belmont Village and would negatively impact the pleasure we get from walking around the Belmont neighbourhood. Please listen to our city planners.

Sincerely

cc Debbie Chapman

Subject: [EXTERNAL] Re: 660 Belmont

Follow Up Flag: Follow up
Flag Status: Flagged

Hello Juliane,

Here is my feedback on 660 Belmont Ave.

My number one complaint is the height of the building being proposed. Zoned for 8 stories, requesting 13, over `1.5 times higher than zoning permits; zoned for 25 metres, requesting 49 meters, almost 2 times higher than zoning permits. Even with policy 15.D.4.23 allowing for an increase in building height up to 50% the building proposed is 1 storey higher and 13 metres higher! If we as a city are not following the official plan then why are we wasting time and money having an official plan? I believe the official plan is well thought out for 660 Belmont.

Another concern I have is green space. We will be bringing at least 163 people into the neighbourhood and no more green space. The applicant's answer to this problem was supplying wider balconies. This solution does not provide green space for the neighbourhood. If you examine the high rise residential buildings near to 660 Belmont there is a border of green space around the high rise buildings. This will not be the case with this high rise. Green space helps cool the air around the building which we will need as our climate warms. Park space in Midtown is at a premium so having buildings surrounded by greenspace helps make Midtown a much more pleasant place to walk and live.

I am okay with fewer parking spaces than the official plan requires because this area is well serviced with shops, doctors offices, buses and the ION.

The last concern that I have is the lack of affordable housing. This area with amenities close by is an ideal place for people with few resources to live. This city needs more affordable housing.

Sincerely

Subject: [EXTERNAL] 660 Belmont Development & Sale of Belmont Lane E

Dear Garett,

I have not heard much in the past months about the development at 660 Belmont. I would like to know the plan for the request by the GSP Group Inc to buy the portion of Belmont Lane E. that borders the 660 Belmont property. It seems when we had the Neighbourhood Information Meetings, the GSP Group Inc were assuming that they could buy the lane. Is this already a done deal without input from the neighbourhood? I am opposed to the city selling this lane to the GSP Group. For one reason, the lane provides a buffer so that buildings along the lane cannot build close to the Iron Horse Trail. Also if the lane is not declared surplus then the GSP Group cannot build the proposed building at 660 Belmont so high.
Belmont Village was a planned shopping area in Westmount. The selling of the lane will devalue the historical characteristics of the Village. I do not feel that the lane is surplus property.

Sincerely

Garett Stevenson

Subject: RE: [EXTERNAL] Re: 660 Belmont

Hello,

The 50% allowance in the Official Plan allows for "whichever is greater" when considering the maximum height in metres or in storeys.

15.D.4.22. Generally no building will exceed:

a) 10 storeys or 32 metres in height, whichever is greater, at the elevation, on lands designated Mixed Use identified as a City Node, or Community Node on Map 2.

b) 8 storeys or 25 metres in height, whichever is greater at the highest grade elevation, on lands designated Mixed Use as a Urban Corridor on Map 2.

c) 4 storeys or 14 metres in height. whichever is greater, at the highest grade elevation on lands designated Mixed Use identified as a Neighbourhood Node on Map 2.

In my research, I don't believe this policy has been relied on for other Zoning By-law amendment applications.

Thanks,

Garett

From:
Sent: Tuesday, November 9, 2021 11:52 PM
To: Garett Stevenson <Garett.Stevenson@kitchener.ca>
Subject: [EXTERNAL] Re: 660 Belmont

But doesn't 50% of 25 metres mean an extra 12.5 metres? 25 + 12.5 is 37.5 metres and this new application is for 39 metres + mechanical penthouse so it doesn't fall within "up to 50%" extra height. Has this 50% increase in height been used before? I asked Debbie Chapman about this and she cannot remember this clause being used. And in fact she thought it might be a dangerous precedent. Also what about the "compatibility with adjacent lands"? There are no other buildings that high on the adjacent lands. The clause also says that "all the applicable policies within the plan are satisfied". Seems like this application is asking for other by-law adjustments as well.

Hello

The Applicant has outlined their position in their Planning Justification Addendum, but specifically is looking to rely on policy 15.D.4.23 to permit additional height within the limits of the Official Plan:

> From a building height perspective, Section 15.D.4.22 identifies that for sites within an Urban Corridor such as the Subject Site that "*[g]enerally no building will exceed … 8 storeys or 25 metres in height, whichever is greater at the highest grade elevation*". Section 15.D.4.23 further directs that the City may consider increase heights up to 50% of the permitted building for building mixed-use building containing residential units, where they have "*a pedestrian scale base, appropriate massing along the streetscape and compatibility with adjacent lands is achieved and that all the applicable policies within this Plan are satisfied*". This policy contemplates a maximum building height of the greater of 12 storeys or 37.5 metres at the highest grade elevation for the Subject Site.

The previous version was 13 storeys and 49 metres, which exceeds the 50% policy and required an Official Plan Amendment.

A Zoning By-law Amendment is still required to permit any height greater than 25 metres and 8 storeys. The Zoning By-law Amendment application is now requesting site specific zoning regulations for an increased building height of 11 storeys and 39.1 metres (whereas 8 storeys and 25 metres is permitted), a reduced tower setback from the podium of 2.7 metres (whereas 3.0 metres is required), and a reduced podium height of two storeys (whereas a minimum of three storeys is required). A site-specific parking reduction is no longer being requested as 170 on-site parking spaces are now shown (144 underground parking spaces and 26 surface parking spaces) whereas the required parking is a minimum of 145 spaces and a maximum of 210 spaces.

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont

Hi Garett,

I have a question about the new proposed building at 660 Belmont. The article in the Record on Friday Nov 5th states:

"The lower height means the developer no longer needs an Official Plan amendment but still needs a zoning bylaw amendment because of setback requirements and the lower building base height."

What does this mean? It seems the height is still above the 25m the zoning allows. What was the reason the developer needed an Official Plan amendment before the revised application? Does the new height require a zoning bylaw amendment? Can you please clarify this for me? Also it seems that the mechanical penthouse is not included in the 39.1m height.

Thanks

Garett Stevenson

Hello,

I can confirm that no agreement/decision has been made to sell the lane and it will be discussed at the Planning and Strategic Indicatives Committee meeting on February 7, 2022 (see attached).

Thanks,

Garett

Subject: [EXTERNAL] 660 Belmont Ave Development

Hi Garett,

A quick question. In the **Cover Letter** for the development at 660 Belmont there is a sentence that reads:

" The owner is pursuing acquisition of the subject portion of the Lane through the proposed application process. Disposition of the Lane was advanced as part of the Pre-Submission Meeting in 2019 and an appraisal was completed in 2020 in coordination with the City of Kitchener's economic development division."

Does this mean that 660 Belmont LP Inc already has permission to buy the Belmont East lane that abuts the 660 Belmont property? Are the minutes of this meeting that is referred to publicly available? Who would have made the decision that the public lane could be sold?

It seems that 660 Belmont LP Inc has invested heavily on the assumption that the lane can be bought. All the drawings etc. are developed with this understanding. The company must have had assurances that there would be no problem buying the lane. I would like to know how this process works. Is it that simple that a developer asks to buy some public land and the city asks for a certain amount of money and the deal is done? Seems like there should be a public record of this meeting and decision. I would like to read the minutes of that meeting.

Thanks

Garett Stevenson

Subject: [EXTERNAL] Kitchener residents fighting Belmont Village development don't oppose beneficial, intelligent growth

This article appeared online in the letters to the editor section of The Waterloo Region Record on Monday January 3, 2022.

Disappointingly, The Record chose not to include this piece in their print edition, citing concerns with the length of the article.

I'm sending it to you for your records, and in case you missed it.

The pattern that is emerging by too many developers is to propose a condo building or buildings, that completely ignore the existing zoning bylaws, and then see how much of their proposal they can push through.

Complaints ensue and minor changes are made. The changes to the proposed buildings are often still significantly out of the range of the city bylaw, but the public impression is that the developer sacrificed a lot for people who have been referred to as loud-mouthed NIMBYs.

The Zehr Group's proposal for 660 Belmont Ave. W. would currently be undergoing construction if it had duly respected the zoning bylaw. The existing zoning bylaw clearly states the maximum height for this category of building is 25 metres. The initial proposal by the Zehr Group was 13 storeys and they have revised it to 11 storeys, which puts both the initial proposal and the revision at more than 40 metres.

Considering the height of the rest of the buildings in Belmont Village is but two to three floors, it's not surprising that citizens were alarmed at the very marked lack of compatibility with the area. To suggest that because Belmont Avenue south of Glasgow Street has highrises, so too should Belmont Village, underlines the lack of comprehension of the appeal of the human sized scale of the area.

We do need to build in the urban core to prevent more encroachment on our farmland. Suburban sprawl shouldn't continue, yet it does - some of it dangerously close to our water regeneration area. None of it includes low-or medium-rise residential buildings. Our farmland is further threatened by more gravel pits, which are needed to provide more concrete for more highrises.

In order to stop suburban sprawl, higher density housing was agreed to. However, what has happened in many Canadian cities, is that thoughtful, inclusive, accessible, appropriately sensitive growth has been disregarded.

Developers don't make as much profit on mid-rise, family sized, affordable units. It's more costly to build a structure that is unique, contains a higher level of artistry and craftsmanship, and reflects an understanding of sense of place. It's to the developer's advantage to propose a generic looking condo.

To see the mistakes of the past when everyone thoughtlessly allows trends to overtake common sense, we needn't strain to look too far. The Market Square mall at King and Frederick streets in Kitchener is one example.

Look at how many cities mindlessly dumped malls into their downtown cores, often razing beautiful historic buildings in the process. As with the condos, these cities believed it was good for business. There was also a time when we irresponsibly thought plastic, asbestos, radiation, pesticides, and preservative laden food was progress. We need to learn from the past and be much more circumspect.

The scorn heaped on those who wish to protect Belmont Village from harmful development has been hurtful and misguided. The people who are opposed to thoughtless development are not against beneficial, intelligent growth.

Other Ontario cities enjoy their 'villages' too: Glebe Village in Ottawa has strict bylaws that protect a significant portion of this particular area; Locke Street in Hamilton, a villagelike area that is comprised of mostly independent businesses, is located in a residential area with new buildings no more than four or five storeys; and Wortley Village in London, another welcoming, human scale community, is enjoyed by many.

If the majority of the people in Waterloo Region want our cities to take the shape of unimaginative, profit driven, wealthy, privileged developers who are unaccustomed to hearing the word 'No,' then we are well on our way to another future filled with regret.

Condemning those of us who dare to speak out is sadly part of the folly.

Subject: [EXTERNAL] An additional point

Hi, Garett. Hope you had a pleasant holiday season and that you and your family have stayed safe in these most interesting times!

Thanks for adding my last email to the staff report. I've now discovered an additional aspect I'd like to comment on so that it's also added to the staff report. I hope this is still possible.

I previously pointed out the lack of any effective improvement in the height of the building. What I didn't realize before is that the developer's compensation for the 4.7 m reduction in height is to add floor area by pushing the east profile of the building 7 metres further out toward the Iron Horse Trail, thus increasing the perception of height and looming presence for people on the Trail as well as for homeowners in the neighbouring area on that side of the building.

The overall floor area has also been substantially increased so that the floor space ratio (am I using the correct term?) without the laneway would be about 5.9 rather than the 4 that is allowed. And you know how I feel about the City selling the laneway. Further to what I mentioned in my previous email, there was a comment in the Staff Report when the new Zoning By-Law was approved: "There are two laneways present within the study area (Belmont Lane East and Belmont Lane West). Both of these lanes are municipally owned and are to be maintained." I would interpret this as meaning that the intention was for the City not to relinquish ownership of the laneway.

The bottom line is that rather than decreasing the size of the proposed building, the new design will produce a building that will actually be larger overall than the one in the original proposal. If I'm misunderstanding any of this, I'd appreciate clarification.

The *Record* article from November 6, 2021, praising the revised plan, includes the following:

"The changes to the proposed development application at 660 Belmont Ave. stem from concerns raised by residents in the neighbourhood, said Kitchener city planner Garett Stevenson. 'They have responded to what they have been hearing,' he said."

I just want to let you know that I will find it most disappointing and disturbing to encounter any further mention by anyone that the Zehr Group has in any meaningful way addressed or accommodated the concerns of the community since the reality is that they have blatantly failed to come even close to doing so.

Let me know if you have questions or further explanations you think I should understand.

Thanks again for bearing with me through all of this!

Subject: Zoning Change Request for 660 Belmont Ave

Juliane vonWesterholt, Senior Planner, City of Kitchener

Dear Ms vonWesterholt:

I understand that a zoning change for the property at 660 Belmont Ave has been requested in order to allow a 13 storey building with a height of 49 metres to be built when the current zoning bylaw allows only an 8 storey building with a maximum height of 25 metres. I am opposed to this zoning change. A building of 49 metres would loom large over the single family neighbourhoods on both sides of Belmont Ave and would not be compatible with the rest of the buildings in Belmont Village.

Also, I object to the reduction in parking spaces requested. For the proposed 163 units, the current requirement is for 147 parking spaces and additional 31 surface parking spaces for the ground floor commercial space for a total of 178 parking spaces. The current proposal would only supply 131 below ground parking spaces and 30 surface parking spaces. Once a building is built, the possibility of providing more underground parking is not possible. Insufficient parking will result in street parking. Already on the Park street side of Belmont Ave, the city has had to issue parking passes to residents because of people parking on the streets when visiting Grand River Hospital. Until the parking passes were issued, many days it would be difficult to back out of the driveway because of parked cars.

Finally, the current plan for the site fills the entire property with concrete and pavement, no space for trees or gardens. With no space for water from snow and rain to soak into the ground the general public will be responsible for dealing with the runoff from this building. We are in a climate emergency and this building fails the forward thinking that is required to live in the hotter, wetter, windier environment that is our future.

Some ideas that I would like to see for a building on this site: a green roof (Toronto has had this requirement for years); awning to mitigate the need for air conditioning; windows on both sides of a unit to allow for air flow; green space to enable aquifer recharge instead of runoff that contributes to flooding; some rental units because not everyone can afford or wants to own property; outside doors on each unit of the commercial ground floor - more pandemics are likely in our future.

Sincerely
