

---

To: City of Kitchener Council, By Law Enforcement Division

From: VanMar Constructors ON Inc.

Date: August 30, 2024

**Subject: Request for Noise By-Law Exemption for Construction Activity**

VanMar Constructors ON Inc. is currently constructing a multi-residential housing development project within the City of Kitchener. VanMar is committed to supporting the City of Kitchener's ambitious housing and environmental goals through our multi-residential housing development project and in alignment with the City's goal to address housing affordability and supply, we are seeking an exemption from the city's noise by-law, which restricts construction activities to the hours between 7:00 AM and 7:00 PM. We request permission to start construction at 6:00 AM from October 1, 2024, until April 30, 2025. Below, we present a detailed justification for this request and outline our commitment to minimizing potential impacts to the surrounding community.

**Justification for Early Start Time**

**1. Support for Accelerating Housing Targets**

The City of Kitchener has established a strategic priority to accelerate housing development and address community needs. By starting construction at 6:00 AM, we aim to advance our project timeline, contributing to the City's objective of addressing and increasing the housing supply while addressing affordability issues more promptly. This alignment with municipal goals underscores our commitment to advancing the City's housing agenda and tackling the housing supply shortages.

**2. Mitigation of Traffic and Environmental Impacts**

Our trades and workforce travel from various locations across the Greater Toronto Area (GTA). An earlier start time helps our tradespeople avoid peak-hour traffic, reducing commute times and greenhouse gas emissions. This initiative supports the City & Municipal's environmental sustainability goals by contributing to lower traffic congestion and reduced carbon footprints. In support of this initiative, we have received and attached requests from our tradespeople, Davicon and Uniform. These early starts not only support efficient scheduling but also emphasize our commitment to our environmental goals.

---

### 3. Optimizing Workforce Management

Union regulations typically limit work hours to 3:00 PM, making an earlier start crucial for maximizing productivity and ensuring a full workday. A 6:00 AM start also allows for a staggered arrival of workers, facilitating a smoother transition into the site and avoiding congestion at 7:00 AM. The earlier start also facilitates better scheduling and efficient use of available labor, directly contributing to the rapid completion of housing units and aligning with provincial and municipal targets for housing delivery. By commencing construction at 6:00 AM, we're enabling our workforce to manage their schedules more effectively, leading to an improved work-life balance. Early start times allow workers to complete tasks earlier in the day, providing them with more flexibility in their personal lives and reducing the need for extended hours or weekend work. This balance not only enhances overall job satisfaction but also contributes to better workforce morale and productivity.

### 4. Proactive Noise Management Strategies

To mitigate potential noise impacts, we are proposing the following measures:

- **Restricted Hoist Operations:** Limit hoist operations to a specific number of runs between 6:00 AM and 7:00 AM. This approach will facilitate the entry of trades and materials with minimal disruption around the exterior of the building.
- **Noise Minimization Activities:** We are committed to restricting certain high-noise activities to later in the day. We are open to collaborating with City officials to define specific activities that can be undertaken early in the morning with minimal noise. This would include deliveries, placing rebar etc. The most critical item would be the allowance of utilizing the hoist to get teams up the building so that work can be completed within the building instead of at the exterior. As we move into the taller portion of the tower, and the building becomes enclosed, most work in the earlier hours will be completed internally, which will limit the amount of noise transmission to the neighbouring community.
- **Noise Reduction with Construction Progress:** As construction progresses, and the building becomes enclosed with the façade materials including windows and doors, the noise levels on site will be significantly reduced. Trades people will be working within an enclosed structure which should decrease the noise levels identified within the initial noise monitoring report.

## 5. Noise Monitoring Data

We have also engaged Englobe, an Acoustic Engineer, to monitor noise levels on-site from May 3 to May 12. Key findings in the report include the following:

- **Background information:** The sensors installed monitor every second, with an average reading provided every hour, along with the loudest noise during the 1-hour period (Lmax). Englobe confirmed that we should analyze the Leq values within the data as this is the most accurate sense of noise during the hour. The Lmax will only identify the loudest noise which may only last a second or two at maximum length. Sensor locations and distances from the existing building at Station Park building B are identified within the report provided in the attachment. Construction work did NOT over the weekends during the monitoring duration. Construction start times were from Monday to Friday, between the hours of 7:00 AM – 3:00 PM – 4:00 PM daily.
- **Average Noise Levels:** Noise levels between 6:00 AM and 7:00 AM averaged 56.1-67.4 dB, with a minimal increase compared to post 7:00 AM levels (61.0-68.9 dB). The anticipated increase is relatively minor, between 1.5-4.9 dB, and we expect that the noise levels will be similar to the 7:00 AM range if the early start time is permitted.
- **Comparison with Ambient Noise:** During the entire monitoring period, noise from the Metrolinx train horn, typically at 6:00 AM, exceeded all construction noise levels across all 3 sensors. Additionally, overnight noise levels, between the hours of 11:00 PM – 1:00 AM, on average were 57dB. This noise level on average was comparable to the noise levels at the construction start time between the hours of 7:00 AM and 8:00 AM. The average variance across the entire duration of the monitoring period was only 4.08dB.
- **Adjacent Building Materials:** For the monitoring, the sensors were mounted to posts located at the hoarding surrounding the site. One thing to note is that the existing buildings at Station Park were previously built by VanMar, and we can confirm the inclusion of double-glazed windows and doors, which provide a reduction of noise levels by +/-31dB. In order to achieve this reduction, it would need to be assumed that this reduction would only be applied if the windows and doors are closed. As we approach the winter

---

months, it would be assumed that windows and doors will be closed during the hours of 6:00 AM – 7:00 AM, which would support the minimizing of noise if we were granted an exemption to start at 6:00 AM.

## 6. Community Notification

In line with our commitment to community consideration, we will issue personalized notifications to residents, especially those in Station Park Building B facing the construction site. This notice will detail the adjusted construction hours and our efforts to minimize disturbances, ensuring transparency and fostering positive community relations.

## Conclusion

Granting this exemption to allow VanMar Constructors Inc. to start at 6:00 AM, will significantly enhance our ability to meet the City of Kitchener's housing supply targets and environmental goals while maintaining our commitment to noise management and community consideration. We are dedicated to supporting the City's vision for sustainable and efficiently expedited housing developments so that our community can have a place to call home sooner. We appreciate your review of this request and look forward to working with the City and Council in any capacity to build on our shared goals.

**ATTACHMENTS ENCLOSED**

August 26, 2024

To Whom It May Concern:

***Re: Noise Exemption Permit***

As a current sub-trade of VanMar Constructors ON Inc, currently working at the DUO condos project located at 641 King St., W. in Kitchener, we are asking that you consider the application request for a noise exemption permit to allow our employees to start at an earlier time.

This would benefit those employees who are commuting into work from as far as the GTA to avoid lengthy traffic delays on their commute to and from work. Our steelmen already have a physically demanding job and work in inclement weather conditions daily and by approving a noise exemption permit it would significantly improve their quality of life.

We would appreciate your serious consideration and thank you in advance for your time.

Sincerely,

A handwritten signature in black ink, appearing to read 'Ana Ferreira'.

Ana Ferreira  
President

**Mobile:** 905-931-7662  
**Web:** [www.daviconforming.com](http://www.daviconforming.com)  
**Email:** [ana@daviconforming.com](mailto:ana@daviconforming.com)

To whom it may concern:

Please accept this short letter as a plea to adjust the start time on site from 7am to 6am. I hope those involved in the decision-making process will be able to see things from our perspective and I would like to fully thank those involved for their time and consideration, regardless of the outcome.

We have multiple out of town employees from all over southern Ontario travelling into the city from places like Bluevale, Innisfil, Mississauga, Markham, Niagara Falls, St. Catherines and Dorchester, just to name a few. For these employees, a 6am start time equates to more time available with their families and loved ones as they will lose less time on highways waiting in traffic while they attempt to get to and from work. For them, a 6am start time equates to an earlier, more predictable commute. For many of them, this earlier commute is inevitable if they are to ensure they will arrive to work on time, because often a later start to their commute equates to a much longer overall commute duration once the additional traffic is factored in and an increased likelihood of highway accidents. But the 6am start time is not only beneficial to those commuting from far away. We often have long days at work (10-11+ hours) and having the crew start at 6am helps to ensure everyone gets home to their families at a decent time. Starting at 6am vs. 7am can mean the difference between sharing a meal with your family that evening or not. For the out-of-town employees, it can mean the difference between getting home at 6pm vs. 7:30-8pm. What it comes down to for everyone is work-life balance. Simply put, the 6am start time allows every one of our employees more work-life balance. In an industry that has such high demand on in-person, hands on, work-until-it's-done, day after day mentality; the work-life balance has always been a huge struggle for construction employees as a whole. Unfortunately, our industry has not been blessed with a work-from-home format. I would love nothing more than to tell all of our employees they will have more of this work-life balance while they put in their hard work, blood, sweat and tears into each day as we shape the skylines of Kitchener.

Thank you again for your time and consideration.

Andrew Berner

Subject: **Station Park Phase 2A - Building C - Noise Monitoring Summary Report**  
621 King Street West, Kitchener, Ontario  
Englobe Reference: 02404088.000

---

## 1 Glossary

**L<sub>EQ(t)</sub>**: The Equivalent Continuous Sound Pressure Level which is an average of the sound pressure level measured over a specified time period “t”. This is commonly used as the preferred parameter for all forms of environmental noise and is expressed in decibels.

**dBA**: A-weighted decibel. The A-weighting approximates the response of the human ear.

**Slow Time Weighting**: A measurement sampling rate of 1 measurement per second, commonly used as the preferred time weighting for steady and varying environmental noise sources.

## 2 Introduction

Englobe Corp. (“Englobe”) is pleased to produce a report summarizing the data collected during the Noise Monitoring Program (“the Program”) conducted for VanMar Constructors Inc. (“the Client”) for the construction activities taking place for Station Park Phase 2A - Building C (“the Project”) at 621 King Street West, Kitchener, Ontario (“the Site”) during the period of **May 3, 2024 to May 17, 2024**. The objectives of this report are as follows:

- Present all 1-hour Equivalent Continuous Sound Pressure Level ( $L_{EQ(1hr)}$ ) data collected during the Project in a single document on a unified scale;
- Present basic summary statistics for the collected data;

This report was prepared with the purpose of summarizing the data collected during the Project in order to assist in interpretation and communication of the data and its implications for nearby receptors.

Please note that the application of the above objectives to any predictive environmental noise modelling using software, additional analysis, commentary on and/or comparison of collected noise data to relevant municipal/provincial/federal regulations and/or guideline are outside the scope of this report.

## 3 Project Background

The primary goal of this Program was to measure noise levels near adjacent residential land uses in order to better understand the noise impact of the regular operation of construction activities associated with the Station Park Phase 2A Tower C project. It is understood that the Client intends to use the noise impact data to assist in its application for a noise exemption from the City of Kitchener.

To achieve this, Englobe installed noise monitors as detailed in Table 1 and Appendix A. Weather data (taken for a local third-party weather station) was also analyzed to highlight any noise measurements that are invalid due to adverse weather conditions (including wind speeds above 20 km/h, precipitation events, etc.).

## 4 Collection of Noise Data

Data collection for the Program was conducted in accordance with Englobe's corresponding project-specific quote dated April 8, 2024. Sigicom INFRA S50 Digital Sound Level Meters ("SLMs") were utilized for the data collection for the Program. The SLMs were programmed to measure A-weighted noise levels with a "Slow" Time Weighting. For the duration of the monitoring period, the equivalent sound pressure level was measured in 5-minute intervals, which Englobe later averaged to 1-hour intervals.

**Three (3)** monitoring stations were deployed concurrently for the Program, at the locations detailed in Table 1 below. A site map depicting the monitoring station deployment locations is included in Appendix A.

**Table 1: Noise Monitoring Station Deployment Location Summary**

Monitoring Station No.	SLM Serial No.	General Deployment Location	Instrument Height	Installation Date	Removal Date
A	S50: 14603	Hoarding Wall near unit B105 approx. 47m from Tower C	4.3 m	May 2, 2024	May 20, 2024
B	S50: 13846	Security Pole near unit B101 approx. 12m from Tower C	3.74 m	May 2, 2024	May 20, 2024
C	S50: 13649	Light pole above air shaft approx. 35m from Tower C	3.5 m	May 2, 2024	May 20, 2024

It should be noted that the locations of the monitoring stations were chosen in consultation with the Client. All monitoring stations were positioned between the prospective noise source and the receptors.

No noise limits were determined for this program, since the purpose of monitoring is solely to measure the noise levels during regular construction activities. All sound level meters have valid lab calibration certificates, included in Appendix B, and were field calibrated before and after the Program using a **Brüel & Kjær Type 4231 Sound Calibrator** (Serial Number: 3026798).

## 5 Summary of Collected Data

The complete data record in a graphical, temporal form can be found in Appendix C. The complete data record in tabular form can be found in Appendix D.

**Table 3** below presents a brief summary of the full dataset collected during the monitoring period from May 3, 2024, to May 17, 2024.

**Table 3: Summary of Collected Data**

Monitoring Station No.	General Deployment Location	Highest L <sub>EQ(1hr)</sub> Measurement, dBA [Date / Time]
A	Hoarding Wall near unit B105 approx. 47m from Tower C	71.8 [2024-05-08 / 13:00:00-14:00:00]
B	Security Pole near unit B101 approx. 12m from Tower C	79.7 [2024-05-06 / 10:00:00-11:00:00]
C	Light pole above air shaft approx. 35m from Tower C	78.1 [2024-05-06 / 15:00:00-16:00:00]

## 6 Closure

We trust the foregoing will satisfy your present requirements. If you have any questions regarding this matter, please do not hesitate to contact us.

Yours very truly,

Englobe Corp.
